Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Victoria Hilkevitch  
1701 Circle Dr  
Bloomington, IN 47401

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Victoria Jackson

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Anita Jacobs  
76 Marigold Dr  
Terre Haute, IN 47803

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do. Stop stealing from us!

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment. Stop stealing from the planet!

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Cathe Pearson  
514 Norseman Dr  
Jeffersonville, IN 47130

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Cathy warren

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
David Crocker

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Diana Beedle

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Glenda Striegel

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Gwen Hicks

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
John Poole

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kylee Snider  
2605 Poland Hill Rd  
Lafayette, IN 47909

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
L. Hughes

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Mary Roberts  
878 E 6th St  
Clinton, IN 47842

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Michael Martin

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Nancy Malan

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Nancy Smothers

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Norman Abel

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Rebecca Craig  
712 N Morrison St

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Rhonda France

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Rosalynd Storer  
17401 Fetzer Ct

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Saleem Nasser

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Susan Young  
1324 N Apperson Way  
Kokomo, IN 46901

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
susie mattingly

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
william Richardson

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Amy durand

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Barbie Buck

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Bonnie Tate  
609 Queens Ln  
Noblesville, IN 46060

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Daniel Blake  
1724 E Camby Ln  
Bloomington, IN 47401

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare. With the Trump tariffs around the corner, people will soon be destitute.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. How can we afford this? I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

REJECT Duke's request in Cause Number 46193. It's imperative.

Thank you,  
Emily Singer  
7413 Rogers Dr  
Indianapolis, IN 46214

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Jacqueline Sizemore

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
James Jaspering  
103 Emily Ave  
Clarksville, IN 47129

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Jeffrey Glancy

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Karen DeMoss  
1224 Maplewood Dr  
Kokomo, IN 46902

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Karen Felts

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Lori Hepler  
2192 Williams Glen Blvd

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Mark Leineweber

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Maryann Traut

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Patrick Arvay

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Patrick Butterly  
409 Illinois St  
Fortville, IN 46040

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
robert evans  
8078 Larkins St

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I as a senior CANNOT AFFORD ANOTHER INCREASE! YOU ARE FORCING ME TO NOT BE ABLE TO AFFORD MY CURRENT MEDICAYIONS THAT I NEED TO SURVIVE! THESE TARIFFS ARE ALSO MAKING IF SO DIFFICULT TO BUY HEALTHY GROCERIES AS WELL. YOU DO NOT CARE ABOUT US AS TRUMP COULD CARE LESS! WHAT AM I SUPPOSED TO DO! I WISH I WAS ABLE TO GO BACK TO WORK AT AGE 70. I'VE BEEN TOO SICK! AND YOU JUST DON'T CARE!!!

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Rose Anderson

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Stephen McPherson  
14079 Triple Crown Dr

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Steve Webker

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Vincent Desjardins

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Angelica Rangull

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Cathy Davis  
3301 S 6th St  
Terre Haute, IN 47802

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Cheryl Bigler

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
craig fox

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Danielle Pearce

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ellen Tocco

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
James Davis

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
James Halcomb

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
James Thompson-Sanders

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
John Mccarter  
1224 W Pine Forest Dr  
Terre Haute, IN 47802

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
John Willey

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
jon rogers

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Larry GARRETT

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Linda West  
635 West Washington St

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Meredith Uland  
9876 Haverstick Rd  
Indianapolis, IN 46280

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Michael Duke  
587 Old State Rd 65  
Princeton, IN 47670

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Neil Clayton  
2124 Russet Ct  
Plainfield, IN 46168

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Robert Chumley  
201 Oakland Ave  
Terre Haute, IN 47803

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Stacey Motosicky  
703 North Ave  
Seymour, IN 47274

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Steve Dummitt  
20812 Summit Rd  
Noblesville, IN 46062

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Todd Rogers

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Tonda Fletcher

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Walt Tom

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Anne Brickler

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

Dear Counselor Bill Fine,

Relying on volatile prices of natural gas as the future for a new build is Ridiculous. If building a new plant is a need, it should ONLY be one that is fueled with future forward solutions that keep America independent as well as cleaner. Coal, Nor gas, or even natural gas are neither of those things. Build for our future, or keep what we got!

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Clara Matthews  
108 E Lewis and Clark Pkwy  
Clarksville, IN 47129

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Clee Oliver

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Danny Estes  
40 W Pennsylvania St  
Shelbyville, IN 46176

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
David Quinn

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
David Stepp  
207 W Montgomery Ave  
Clarksville, IN 47129

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

My husband and I are retired and live on a fixed income. It appears we will be having to make choices between heating/cooling our home vs. purchasing food to survive. This is so sad to treat customers this way just to make more money for Duke's bottom line.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Debora Schultz

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Ethel Denney

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Eugene Young

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Eva Bailey

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
James Richhart  
1580 Roberts Rd  
Franklin, IN 46131

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Jamie Revalee

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Janet Pottoroff

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
JoAnn Braithwaite  
710 Perry St  
Vincennes, IN 47591

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Jodi Lewis

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Jodi Lewis

Dear Counselor Bill Fine,

NIPSCO has had a really busy few years raising our utility bills, with an electric rate hike in 2023, a gas rate hike earlier in 2024, and a pending request for a \$600+ million gas peaker plant that will barely run.

With all these increases in mind, I am shocked to see NIPSCO file for yet another electric rate hike - this time by an enormous \$45 per month. We cannot afford this!

People in my community are already having a hard time keeping up with huge increases in food, housing, and healthcare without all these increases from NIPSCO. And we're not alone - data from the US Census Bureau shows that 42% of Hoosiers are struggling to afford basic expenses, the highest percentage in all of the Midwest.

Meanwhile, NIPSCO got \$2 billion from Blackstone, the world's largest alternative investment fund, at the beginning of 2024.

Please do everything you can to advocate for residential customers in Cause Number 46120. We cannot afford to pay \$45 more per month. Please reject NIPSCO's request for the highest profit margin - and the highest fixed charge - out of all big electric utilities in Indiana.

Finally, while I am stridently opposed to NIPSCO's huge rate hike, I fully support their proposed program for low-income customers. LIHEAP helps keep folks connected during the coldest months of the year, and I'm glad to see NIPSCO propose a program to help keep folks connected during the hottest months of the year. Please stand up for my vulnerable neighbors by supporting NIPSCO's low income assistance program proposals.

Respectfully,  
Kathy Bledsoe

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request!  
Thank you for making time to read my concerns.

Thank you,  
Kathy DeYoung  
9050 Stone Trce Blvd  
Avon, IN 46123

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Kelly Finley

Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Larry Johnson  
2083 Southwood St  
Greenwood, IN 46143

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Larry Johnson  
11771 N County Rd 200 E  
Brazil, IN 47834

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Martha Duryea

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Mary Kuchle

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Nancy Wright

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Nokeisha White

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Stephen Fiscus  
306 E Walnut St  
Odon, IN 47562

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Susan Harris

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Wanda Hall

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
William Fleming

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Alecia Stsrchrr

CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Barbara Miller

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Barry Huff  
7030 Black Chapel Rd SE

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
cheryl banholzer

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Cheryl Trisler

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Cindy Shults

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Dave King  
Railroad St

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Debbie Brown

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Donna Jenkins

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Jamey alvey  
1117 S Armstrong St  
Kokomo, IN 46902

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Janet Fogel  
1500 Walnut St

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Julia Pharris

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Kathleen Hamilton

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
LeRoy Morton

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Linda Weir

**EXTERNAL EMAIL:** This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

Thank you for taking the time to consider this letter. My name is Madeline Hirschland. My husband, Lawrence Moss, and I are Duke ratepayers who live in Bloomington, zip code 47401.

I am writing in regard to Duke's proposed new Cayuga gas plants – Cause No. 46193 - and the rate increases to fund these plants for which Duke seeks your approval. I ask you to reject the proposal on the basis of the five pillars identified by Indiana's 21st Century Energy Policy Development Task Force and our own experience as homeowners.

Reliability, Resilience and Stability

By "reliability", the 21st Century Energy Policy Development Task Force refers to adequacy and operating reliability. It defines "resilience" as the ability of a system or its components to adapt to changing conditions, and to withstand and rapidly recover from disruptions or off-nominal events. "Stability", as defined by the 21st Century Energy Task Force, is the ability of an electric system to maintain a state of equilibrium during normal and abnormal conditions or disturbances... Indiana's electric system should be able to deliver a stable source of electricity with increasingly higher levels of stability." It is assumed that natural gas is a reliable source of electricity that provides resilience and stability – and that renewable resources are not reliable. Recent history does not bear this out.

Over the past 12 years, The U.S. has suffered five separate large-scale grid outages, mostly driven by the failure of gas-fired power during periods of extreme cold. The worst of them — the collapse of the Texas power grid during February 2021's Winter Storm Uri — left 4.5 million homes and businesses without power at its peak, caused billions of dollars of economic damage and led to the death of more than 200 people.

These outages challenge arguments that favor increasing reliance on fossil gas over renewable energy. Gas is frequently touted by supporters for its flexibility and reliability — especially in comparison to wind and solar — but in moments of extreme heat and cold, studies find that these purported advantages evaporate. In fact, although some politicians, regulators and fossil-fuel industry groups have blamed renewable energy policies for grid crises, in-depth research by FERC and other entities shows this to be untrue.

Over the Christmas holiday in 2022, Winter Storm Elliott caused the failure of more than

70,000 megawatts of generation capacity across the Southeast and forced Duke and the Tennessee Valley Authority to institute rolling blackouts impacting millions of customers to maintain grid reliability. From New York to West Virginia, production declined by as much as 54 percent during the storm's peak compared to the days before. Similarly, gas production shortfalls played a role in the Texas grid disaster in 2021.

On the other hand, renewables can help mitigate energy crises. In a March 2025 article, Forbes reports that:

California, which suffered rolling blackouts in August 2020 during record heat waves, made it through last summer's record heat without breaking a sweat thanks largely to storage capacity growing from .5 GW in 2018 to 13.3 GW in 2024.

Texas broke power demand records last summer amid massive data center growth and brutal heat waves, and peak summer demand is expected to soar from 85 GW in 2024 up to 148 GW in 2030. Adding 19 GW of solar and 6.2 GW of storage since 2019 helped keep the lights on – an 800% increase in solar and 5,500% increase in battery storage over that period.

As far as reliability, resilience and stability go, gas is far from a magic bullet. At a minimum, to be reliable, resilient and stable, the grid should be broadly diversified. In Indiana, Duke Energy sources 96% of its electricity from coal, gas and oil. Adding more gas would be a move away from reliability, resilience and stability.

### Affordability

The 21st Century Energy Policy Development Task Force notes that “decisions regarding Indiana's generation and resource mix and ratemaking constructs must result in retail electric service that is affordable across the residential, commercial, and industrial customer classes.” With an average current monthly electric bill of \$127, many Hoosier households already must decide between paying for basic needs and paying for electricity. From December 2023 to November 2024, 38,351 Hoosier households - nearly 1 in 200 – had their electricity disconnected by Duke because of non-payment of bills. On top of the \$19 a month increase already granted by the IURC, Duke is now requesting that ratepayers foot the bill for these proposed new gas plants, which, by 2030, will increase ratepayers' bills by an additional estimated \$15 a month. How many thousands or tens of thousands more Hoosier households will have to choose between electricity and other essentials when their bills increase by, on average, an additional \$34 a month - an average increase of 27%?

The Task Force identifies two means to help low-income customers afford their energy bills. First, it identifies “customer assistance programs, such as the federally-funded Low-Income Home Energy Assistance Program (LIHEAP), the federally-funded Weatherization Assistance Program (WAP)” and programs funded by utility companies, e.g. Duke. In April, all the federal LIHEAP staff were laid off and the administration has proposed eliminating WAP, whose funds have been frozen intermittently since February. With its energy efficiency plan, Duke expects to reduce energy use by 1.15% per year. If this reduction is compounded and projected out to 2030, it would result in an average household reducing its energy use by 7.8%. But the combination of the already-approved Duke rate hike and the proposed Duke rate hike would increase the electricity bills of an average Hoosier household by 27%. Clearly, these programs cannot be relied on to make electricity affordable to low and moderate-income Hoosiers.

As its second strategy to make utilities affordable, the 21st Century Task Force notes: The ability to draw power from multiple types of resources as part of a diverse generation resource mix allows for the mitigation of price volatility and serves as a hedge against constraints, such as those involving fuel supplies and supply chains, and against other potential future disruptions in supply.

The new tariffs increase the likelihood of price volatility and supply chain disruptions. With 96% of its resource mix coming from coal, gas and oil, Duke's energy resource mix for Indiana is far from diversified!

At the projected cost of \$3.3 billion, the proposed plant will be extraordinarily expensive. With the uncertainty in the supply chain and tariffs on steel and other imported parts, however, the cost can be expected to balloon to many times this projection. This happened with the last similarly extremely expensive project: the Edwardsport coal plant was projected to cost \$1.9 billion but ended up costing \$3.5 billion. With the proposed gas plants, ratepayers will also be on the hook for an estimated \$5.3 billion in financing costs and future rate hikes to pay for a new pipeline to serve the plant, operation and maintenance costs to run the plant and fuel costs to supply the plant.

A March 18, 2025 Forbes article entitled "Solar-Plus-Storage: The Fastest, Cheapest Way To Meet Surging Power Demand" reports:

Many utilities have embraced gas, or promoted restarting closed coal or nuclear plants, but that overlooks the cheapest and fastest-to-build option – solar energy combined with battery storage, also known as solar-plus storage... Utilities must build new generation at the lowest possible price to provide the electricity their customers need. Choosing unaffordable options that can't come online in time to meet surging demand could leave consumers footing the bill, or worse, in the dark.

Environmental Sustainability

The 21st Century Energy Policy Development Task Force states that:

Decisions regarding Indiana's generation mix must take into account both environmental regulations and consumers' demands for sustainable sources of generation. The transition to clean energy resources and innovative technologies is occurring and should be encouraged... Renewable energy generation sources are highly desirable with respect to reducing carbon emissions and are presently economically competitive with existing conventional generation resources because of technological advancements, market innovations, and federal government subsidies.

The proposed gas plants simply replace one high-emissions fossil fuel resource with another. In addition to continuing to emit carbon, the new plants would produce significant amounts of other types of harmful air pollution, including carbon monoxide, particulate matter and volatile organic compound emissions. To repeat, 96% of Duke Indiana's electricity is generated from fossil fuels. Because it would produce more electricity than the coal plants it replaces, the proposed new gas plants would actually increase the percentage of electricity that Duke sources from fossil fuels. This would be happening at the same time as the price of solar plus batteries plummets. This would make a mockery of the 21st Century Energy Policy Development Task Force's emphasis on environmental sustainability.

Furthermore, the main constituent of natural gas is methane, which is enormously harmful to the climate. Methane emissions from gas operations are much higher than earlier estimated. Over a twenty-year period, methane is about 84 times more potent as a greenhouse gas than

carbon dioxide.

Researchers have discovered massive amounts of methane leaks from natural gas facilities.

\*\*\*

On a personal note, through a combination of simple conservation measures and the replacement of old gas appliances with high-efficiency electric ones, my household has reduced our energy use, measured in BTUs, by well over 70%. Our 1960's 2000 sq. ft. home is all-electric and, year after year, reliably generates more electricity from its 29 solar panels than we use. As soon as we're able, we plan to purchase an electric vehicle with "bidirectional charging" that we can use as battery storage so that we can harmonize the timing of our demand for electricity with our solar-generated supply. Our solar panels save us thousands of dollars a year in utility bills. We know first-hand that it is possible for households to generate environmentally sustainable, affordable electricity – be it on their own roofs or through community solar or through utility-scale solar. If data centers cannot manage with clean, affordable energy, shouldn't they foot the bill rather than loading it onto the shoulders of already-stretched ratepayers? And is it fair that ratepayers should bear the enormous non-financial costs of dirty coal and gas plants that they do not need?

Thank you,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Mark Smith

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Marsha Renner

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Nancy Evans

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Randall Pennington

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Randy Choisser

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ruby Brentlinger

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Sue Murph

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Thomas Davis

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
wanda hall  
217 W Park Pl  
Jeffersonville, IN 47130

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
William Hunsucker  
1993 IN-135

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

Dear Counselor Bill Fine,

I am very concerned that Hoosiers are struggling to afford ever-increasing utility bills. Indiana now pays the 12th highest residential electric bills in the country!

Residential utility customers have an extremely limited role in controlling the cost of our utility service. With unaccountable utility regulators, an appointed Consumer Counselor, and legislation passed by the Indiana General Assembly that tips the regulatory process in favor of the utilities, it's no wonder that utility bills across Indiana have continually increased while our ability to pay those bills continues to diminish. Thousands of Hoosiers have had electric and gas service disconnected every month since September 2022, according to data reported to the Office of Utility Consumer Counselor.

Struggling to afford utility service puts Hoosiers in difficult and dangerous positions. We need policies that protect consumers and public health, like strong weatherization programs, affordable repayment plans to catch up on utility debt, and a summer disconnection moratorium to limit the number of Hoosiers enduring high temperatures without electricity. Please do everything you can to pursue affordable monthly utility bills for all Hoosier households!

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Carrie Nowak

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Carrie Nowak

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

an \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
David Carnes  
240 Meridian St  
Shirley, IN 47384

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
David Lamb

We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Heidi Anderson

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
James Lowery

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jo Shelton  
610 N Broad St  
Sullivan, IN 47882

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
John Benya

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kathy Dalton  
306 Millstone Pointe Dr  
Greencastle, IN 46135

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Keith Linville

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Kelly Greene

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Lisa Sallade

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Loren Adams

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Mary Leuck

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
melanie bruce

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Patricia Roberts

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Peter palmer

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Robert Young  
17973 Free Spirit Wy  
Westfield, IN 46074

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ron Bowers

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Steven Bowen

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Susan Ament  
1335 Crest Ct  
Plainfield, IN 46168

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Susan Stricklin

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Susan Young

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Terry Fleener

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
William Lewis

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
William Lutgens  
8296 S Ketcham Rd  
Bloomington, IN 47403

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Barb Joy

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Carol Brisentine

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Charles Beswick

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Daniel Lockhard

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Danny JACKSON  
181 N Franklin St

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Doyle Proffitt  
1712 Hunter Ave  
New Castle, IN 47362

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Eugenia Wesner

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
James Lockard  
17396 E Market St  
Westphalia, IN 47596

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
James Morgan  
716 E Main St  
New Albany, IN 47150

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jon Beasey

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Joseph Hance

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kevin Scheirmann  
3037 Lotus Ln  
Vincennes, IN 47591

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Lawrence Schuler

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Mary morrow  
3320 S Arlington Ave  
Indianapolis, IN 46203

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Megan Hale

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Phyllis Hoffman

People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Richard Cummings

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Rick Jones  
10157 E State Rd 38

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Ruth Reynard

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Sally Holz

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

If customers are to take on costs for a for profit business, the result should be sustainable, not another polluting fossil fuel. Customers don't want another outdated approach, and the huge rate hikes would cripple so many in our community. The profits of shareholders should not come on the backs of Hoosiers. Please reject Duke's request,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Syed hussain  
912 Weeping Way Ln  
Avon, IN 46123

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
T. Gumberts

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Tamara Spencer

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Valerie Hamlet  
3070 Northern Falcon Ridge Dr  
Jeffersonville, IN 47130

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Vicki Garrett

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.
