**RE: Duke Energy Indiana Cayuga Power Plant Application (IURC Cause. No. 46193)**

AARP Indiana on behalf of its members and older Hoosiers across the state who are Duke residential customers appreciate the opportunity to submit comments on Duke Indiana's Cayuga power plant application.

Many of the Hoosiers most impacted by this request are on limited incomes, which makes rising electricity bills a challenge when combined with higher grocery, housing and medical costs. This request is also following Duke's 2024 rate increase, which authorized them to collect an additional \$244.4 million annually from customers.

Before discussing AARP Indiana's concerns on the request, we would like to first acknowledge Duke's rapid response in restoring power to those affected by the storms in Indiana earlier this month. Much like its efforts after hurricanes in Florida and North Carolina, Duke had the power back on in a timely manner thanks to bringing in crews from its neighboring states as well as assistance from other utilities. While other Indiana utilities have struggled with similar outage responses, Duke has shown a knack for getting the power back on.

Further, we want to express appreciation that the plant is utilizing an existing location and transmission which will avoid the MISO queue problem. As the Commission knows, the substantial backlog of interconnections in the MISO queue is further complicating the already challenging task of bringing new generation online.

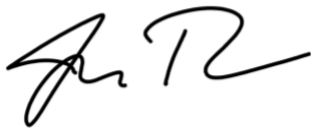

That being said, we have several concerns about the filing.

As mentioned previously, coming on the heels of a 16% rate increase, spending another \$3.3 billion on the two proposed Cayuga units makes a bad affordability situation worse. AARP Indiana opposes using yet another new surcharge to recover costs. This time around it is the proposed "Generation Cost Adjustment." Duke – and Indiana utilities in general – already have too many surcharges and trackers which avoid traditional, thorough regulatory scrutiny. It is AARP Indiana's belief that every new spend proposal does not warrant its own tracker.

Furthermore, AARP Indiana opposes use of construction work in progress (CWIP), the pay-as-you-go financing structure which forces customers to pay for the plant before it is finished and before a prudence review is done.

Finally, we urge the IURC to remain vigilant and ensure that it considers the affordability crisis that has arisen in our state due to soaring utility rates. This includes scrutinizing MISO's \$34 billion spend plan – 15% of which is paid for by Hoosiers. The comments of MISO's own market monitor found the spending to be uneconomic and that local solutions, like local generation, would be cheaper.

We appreciate the opportunity to comment.

A handwritten signature in black ink, appearing to read 'J. Tomcsi'.

RE: Duke Energy Cayuga Project Case # 46193

To Whom It May Concern,

I am writing in support of the proposed Power Generating Stations Expansion currently under review. As a representative of an Indiana-based mechanical construction company with over 140 years of continuous operation, I can attest to the importance and urgency of investing in our state's power-generating infrastructure.

Our company has been directly involved in the construction, maintenance, and retrofitting of power-generating assets across the Midwest. This experience has given us a front-row seat to the evolving demands placed on energy systems and the critical need for forward-thinking investments to meet growing reliability, regulatory, and sustainability standards.

This expansion not only aligns with long-term reliability and energy availability for Indiana consumers but also stands to create highly skilled jobs and stimulate local economic activity. Projects of this nature help maintain and modernize vital infrastructure while preserving the operational integrity of the grid.

We believe this initiative represents a sound investment in Indiana's energy future. It will reinforce reliability, support economic growth, and maintain the high standards of safety and performance expected by both regulators and consumers.

Thank you for your commitment to serving the public interest. I encourage the Consumer Counselor to support the proposed expansion for the good of Indiana's energy security and economy.

Kind Regards,

Stephen Snyder

Business Development Director

Freitag-Weinhardt 765-715-0443

Re: Cause No. 46193

Dear Commissioners of the Indiana Utilities Regulatory Commission,

Thank you for taking the time to consider this letter. My name is Madeline Hirschland. My husband, Lawrence Moss, and I are Duke ratepayers who live in Bloomington, zip code 47401.

I am writing in regard to Duke's proposed new Cayuga gas plants – Cause No. 46193 - and the rate increases to fund these plants for which Duke seeks your approval. I ask you to reject the proposal on the basis of the five pillars identified by Indiana's 21<sup>st</sup> Century Energy Policy Development Task Force and our own experience as homeowners.

### **Reliability, Resilience and Stability**

By “reliability”, the 21<sup>st</sup> Century Energy Policy Development Task Force refers to adequacy and operating reliability. It defines “resilience” as the ability of a system or its components to adapt to changing conditions, and to withstand and rapidly recover from disruptions or off-nominal events. “Stability”, as defined by the 21<sup>st</sup> Century Energy Task Force, is the ability of an electric system to maintain a state of equilibrium during normal and abnormal conditions or disturbances... Indiana's electric system should be able to deliver a stable source of electricity with increasingly higher levels of stability.” It is assumed that natural gas is a reliable source of electricity that provides resilience and stability – and that renewable resources are not reliable. Recent history does not bear this out.

Over the past 12 years, The U.S. has suffered five separate large-scale grid outages, mostly driven by the failure of gas-fired power during periods of extreme cold. The worst of them — the [collapse of the Texas power grid](#) during February 2021's Winter Storm Uri — left 4.5 million homes and businesses without power at its peak, caused billions of dollars of economic damage and led to the death of more than 200 people.

These outages challenge arguments that favor increasing reliance on fossil gas over renewable energy. Gas is frequently touted by supporters for its flexibility and reliability — especially in comparison to wind and solar — but in moments of extreme heat and cold, studies find that these purported advantages evaporate. In fact, although some politicians, regulators and fossil-fuel industry groups have blamed renewable energy policies for grid crises, in-depth research by FERC and other entities shows this to be untrue.

Over the Christmas holiday in 2022, Winter Storm Elliott caused the failure of more than 70,000 megawatts of generation capacity across the Southeast and forced Duke and the Tennessee Valley

Authority to institute rolling blackouts impacting millions of customers to maintain grid reliability. From New York to West Virginia, production declined by as much as 54 percent during the storm's peak compared to the days before. Similarly, gas production shortfalls played a role in the Texas grid disaster in 2021.

On the other hand, renewables can help mitigate energy crises. In a March 2025 article, Forbes reports that:

California, which suffered rolling blackouts in August 2020 during record heat waves, made it through last summer's record heat without breaking a sweat thanks largely to storage capacity [growing](#) from .5 GW in 2018 to 13.3 GW in 2024.

Texas broke power demand records last summer amid massive data center growth and brutal heat waves, and [peak summer demand is expected to soar](#) from 85 GW in 2024 up to 148 GW in 2030. Adding 19 GW of solar and 6.2 GW of storage since 2019 helped keep the lights on – an 800% increase in solar and 5,500% increase in battery storage over that period.

As far as reliability, resilience and stability go, gas is far from a magic bullet. At a minimum, to be reliable, resilient and stable, the grid should be broadly diversified. In Indiana, Duke Energy sources 96% of its electricity from coal, gas and oil. Adding more gas would be a move *away from* reliability, resilience and stability.

### **Affordability**

The 21st Century Energy Policy Development Task Force notes that “decisions regarding Indiana’s generation and resource mix and ratemaking constructs must result in retail electric service that is affordable across the residential, commercial, and industrial customer classes.”

With an average current monthly electric bill of \$127, many Hoosier households already must decide between paying for basic needs and paying for electricity. From December 2023 to November 2024, 38,351 Hoosier households - nearly 1 in 200– had their electricity disconnected by Duke because of non-payment of bills. On top of the \$19 a month increase already granted by the IURC, Duke is now requesting that ratepayers foot the bill for these proposed new gas plants, which, by 2030, will increase ratepayers’ bills by an additional estimated \$15 a month. **How many thousands or tens of thousands more Hoosier households will have to choose between electricity and other essentials when their bills increase by, on average, an additional \$34 a month - an average increase of 27%?**

The Task Force identifies two means to help low-income customers afford their energy bills. First, it identifies “customer assistance programs, such as the federally-funded [Low-Income Home Energy Assistance Program](#) (LIHEAP), the federally-funded [Weatherization Assistance Program](#) (WAP)” and programs funded by utility companies, e.g. Duke. In April, all the federal LIHEAP staff were laid off and the administration has proposed eliminating WAP, whose funds have been frozen intermittently since February. With its energy efficiency plan, Duke expects to reduce energy use by 1.15% per year. If this reduction is compounded and projected out to 2030, it would result in an average

household reducing its energy use by 7.8%. But the combination of the already-approved Duke rate hike and the proposed Duke rate hike would increase the electricity bills of an average Hoosier household by 27%. **Clearly, these programs cannot be relied on to make electricity affordable to low and moderate-income Hoosiers.**

As its second strategy to make utilities affordable, the 21<sup>st</sup> Century Task Force notes:

The ability to draw power from multiple types of resources as part of a diverse generation resource mix allows for the mitigation of price volatility and serves as a hedge against constraints, such as those involving fuel supplies and supply chains, and against other potential future disruptions in supply.

The new tariffs increase the likelihood of price volatility and supply chain disruptions. With 96% of its resource mix coming from coal, gas and oil, Duke's energy resource mix for Indiana is far from diversified!

At the projected cost of \$3.3 billion, the proposed plant will be extraordinarily expensive. With the uncertainty in the supply chain and tariffs on steel and other imported parts, however, the cost can be expected to balloon to many times this projection. This happened with the last similarly extremely expensive project: the Edwardsport coal plant was projected to cost \$1.9 billion but ended up costing \$3.5 billion. With the proposed gas plants, ratepayers will also be on the hook for an estimated \$5.3 billion in financing costs and future rate hikes to pay for a new pipeline to serve the plant, operation and maintenance costs to run the plant and fuel costs to supply the plant.

A March 18, 2025 Forbes article entitled "Solar-Plus-Storage: The Fastest, Cheapest Way To Meet Surging Power Demand" reports:

Many utilities have embraced gas, or promoted restarting closed coal or nuclear plants, but that overlooks the cheapest and fastest-to-build option – solar energy combined with battery storage, also known as solar-plus storage... **Utilities must build new generation at the lowest possible price to provide the electricity their customers need. Choosing unaffordable options that can't come online in time to meet surging demand could leave consumers footing the bill, or worse, in the dark.**

## **Environmental Sustainability**

The 21st Century Energy Policy Development Task Force states that:

Decisions regarding Indiana's generation mix must take into account both environmental regulations and consumers' demands for sustainable sources of generation. The transition to clean energy resources and innovative technologies is occurring and should be encouraged... Renewable energy generation sources are highly desirable with respect to reducing carbon emissions and are presently economically competitive with existing conventional generation resources because of technological advancements, market innovations, and federal government subsidies.

The proposed gas plants simply replace one high-emissions fossil fuel resource with another. In addition to continuing to emit carbon, the new plants would produce significant amounts of other types of harmful air pollution, including carbon monoxide, particulate matter and volatile organic compound emissions. **To repeat, 96% of Duke Indiana's electricity is generated from fossil fuels.** Because it would produce more electricity than the coal plants it replaces, the proposed new gas plants would actually **increase** the percentage of electricity that Duke sources from fossil fuels. This would be happening at the same time as the price of solar plus batteries plummets. This would make a mockery of the 21st Century Energy Policy Development Task Force's emphasis on environmental sustainability.

Furthermore, the main constituent of natural gas is methane, which is enormously harmful to the climate. Methane emissions from gas operations are much higher than earlier estimated. Over a twenty-year period, methane is about 84 times more potent as a greenhouse gas than carbon dioxide. Researchers have discovered massive amounts of methane leaks from natural gas facilities.

\*\*\*

On a personal note, through a combination of simple conservation measures and the replacement of old gas appliances with high-efficiency electric ones, my household has reduced our energy use, measured in BTUs, by well over 70%. Our 1960's 2000 sq. ft. home is all-electric and, year after year, reliably generates more electricity from its 29 solar panels than we use. As soon as we're able, we plan to purchase an electric vehicle with "bidirectional charging" that we can use as battery storage so that we can harmonize the timing of our demand for electricity with our solar-generated supply. Our solar panels save us thousands of dollars a year in utility bills. We know first-hand that it is possible for households to generate environmentally sustainable, affordable electricity – be it on their own roofs or through community solar or through utility-scale solar. If data centers cannot manage with clean, affordable energy, shouldn't they foot the bill rather than loading it onto the shoulders of already-stretched ratepayers? And is it fair that ratepayers should bear the enormous non-financial costs of dirty coal and gas plants that they do not need?

Thank you for your consideration.

Madeline Hirschland

Indianapolis, IN 46204

Subject: Support for the Proposed Cayuga Energy Complex

Dear Commissioners,

On behalf of the Indiana State Building and Construction Trades Council, which represents more than 77,000 skilled trades workers across the State of Indiana, I am writing to express our strong support for Duke Energy's proposed Cayuga Energy Complex in Vermillion County.

This important project, which consists of two 1x1 natural gas combined-cycle generating facilities with a total capacity of 1,476 megawatts, will significantly enhance Indiana's energy infrastructure by adding 470 megawatts of dispatchable electricity to the site's current output. The new units will be constructed on the existing Duke Energy Cayuga Station property, reflecting a strategic investment in a known and proven energy-generating site.

From the perspective of Indiana's construction workforce, this project represents a major economic opportunity. It is expected to generate approximately 550 construction jobs at peak, providing hundreds of Hoosiers with high-quality employment and helping to sustain local families and communities. These are precisely the kinds of jobs that allow our union members to apply their skills, contribute meaningfully to Indiana's energy future, and earn a living wage in safe, stable working conditions.

Beyond construction, the Cayuga Energy Complex will support long-term operations jobs and deliver a notable increase in property tax revenue for Vermillion County—benefits that will be felt across the region in schools, public services, and infrastructure.

For these reasons, we respectfully urge the Indiana Utility Regulatory Commission to grant timely and favorable approval for this project. The Cayuga Energy Complex is a win for Indiana's economy, labor force, energy reliability, and future development.

Thank you for your leadership and for your continued support of Indiana's skilled trades workforce.

Sincerely,

Rob Henderson  
Executive Director  
Indiana State Building and Construction Trades Council

Comments on IURC Cause No. 46193 sent to [uccinfo@oucc.IN.gov](mailto:uccinfo@oucc.IN.gov)

My name is Darrell Boggess from Bloomington IN 47408. I am a Duke Energy customer and retired attorney with an industrial engineering background. These comments supplement my previous comments at the April public hearing. My interests are lower cost, climate change mitigation and public health. I agree that closing the expensive 1970s coal-burning Duke units near Terre Haute is overdue.

In my view, burning methane gas on the proposed scale is unjust, unreasonable, not necessary, not affordable or sustainable and is not in the public interest. Actual cost could increase by additional \$ billions for tariffs, cost overruns and cost of financing and operation. Future demand from AI data centers and electric vehicles may be more perceived than real.

Methane is a temporary source of electric power. Known gas domestic reserves may be depleted in a few decades. Gas prices have a history of price volatility. Possible future gas imports from Canada, Russia, Iran or other sources are unreliable. Methane has significant adverse effects on the atmosphere and severe weather trends. We want to see proposals for affordable and sustainable wind, solar and batteries.

Gas is too expensive according to NextEra Energy CEO John Ketchum, "The need to add to the country's power infrastructure is no longer in doubt. Our industry's mandate is to deliver new generation and capacity solutions at the lowest cost possible. As a leading American energy producer, at NextEra Energy we know all forms of energy will be required to meet that mandate. If we don't build new generation to keep up with increasing demand for electricity, power prices are going to go up. But we need to be practical about when technologies will be available at scale and how much they'll cost."

"Renewables and storage are ready now to meet that demand and will help lower power prices. Gas-fired generation is moving forward but won't be available at scale until 2030. In addition, gas power is more expensive than it's been, with costs having more than doubled over the last five years due to the limited supply of gas turbines, a constrained supply chain, and much higher EPC costs. Nuclear continues to be a much longer-term option in our opinion due to first-of-a-kind risks and uncertainty, with nearer term opportunities centered on recommissioning projects."

"Our mission is to provide our customers with the lowest cost, most reliable energy no matter where they are located. We've been doing it for decades in Florida and across the country and are positioned to keep doing it for years to come. Our scale and experience tells us that all forms of power generation and capacity will be needed as the U.S. tries to keep up with demand."

"And that same scale and experience also tells us that renewables and storage should continue

to be a critical source of new energy and capacity across the country because they are lowest cost and can be deployed now. The tables have turned in the world of energy politics, with wind power, solar energy and battery storage displacing natural gas as the nation's bridge fuel."

Ketchum said gas will play a key role in helping meet a surge of power consumption in the coming years. But new gas-fired power plants will come at a higher cost and won't be available soon enough to meet the initial wave of electricity demand.

In extreme weather, distributed solar is more resilient than a large power plant on one site. Duke has built a solar parking canopy and rooftop solar for low income housing in past years. In contrast, the City is funding solar power for Habitat for Humanity homes. Solar canopies on top of several City and County parking garages provide shade and protect cars from hail damage. Duke could be funding battery installation to make the grid more resilient if they wanted to increase customer goodwill.

Extreme weather and its effects are becoming more frequent. Last year was the hottest on record. The number of heat related deaths is more than the total caused by tornadoes, hurricanes, and flooding. The number of electric service disconnections may increase if more customers are unable to pay their bills. People can die when their electricity is shut off in the summer during 95 degree days without air conditioning or electric fans for cooling. Corn and soybean yields are inverse to temperature. More heat means higher food prices when crop yields are lower. Low income customers are being squeezed financially from multiple directions.

Conflicting market signals are being sent to customers. At my house we have converted the gas furnace, water heater and clothes dryer from gas to electricity. Today we use an electric cold weather heat pump for heating and cooling. 120 volt plug-in heat pumps heat our water and dry the wash. We have on-site solar energy. Federal tax credits reduce the cost of heat pumps. Duke has rebates for appliances that use electricity rather than gas.

Now the electric company wants to burn mega methane gas to provide electricity for heat pump operation.

Growth of customer owned distributed generation located near its point of use should be encouraged. Most of the energy from parking canopies and rooftop solar is used on site. Much of the electricity from large power plants is lost before it reaches customers. Transmission lines are vulnerable to tornadoes and terrorist attacks. The Ukraine experience is an example of how power grids can be a target.

Duke's climate action plan is to burn more coal and gas, polluting the air, land and water. Including more wind, solar and battery storage are reasonable alternatives when corporate earnings are high and executive pay is excessive. This North Carolina company is not pursuing a more balanced Indiana portfolio with environmentally sustainable sources of electric generation that is more affordable and with less financial risk to customers.

I support encouraging Duke Energy to adopt policies and take action supporting customer owned distributed renewable energy. Community solar with virtual metering can benefit renters and leverage marginal properties such as brownfields and parking lots without compromising vast acreage of productive farmland.

The DUK stock price is near all time highs and their annual dividend to shareholders is more than 3 percent. Electric utility companies operate in a low risk market.

Excessive overreach by a regulated utility company is not in the best interest of the public. Energy affordability can be improved by having lower Return on Equity. Regulators in several states are considering mid-single digits (4% to 6%) as a reasonable Return on Equity for a business in a low risk market.

TO: Indiana Office of Utility Consumer Counselor

From: Joan Middendorf, Bloomington IN 47404

RE: Cause No. 49163 Public Comments

Texas is #12 in the country for low electricity costs and one of the reasons is that it allows for the development of alternatives to fossil fuel electricity. Wind, solar, and nuclear are increasing. In 2023, Texas generated nearly 40% of its total energy needs from carbon-free sources, including renewable energy like wind and solar.

Utilities like our own Duke is keeping Indiana a backwaters of energy growth. Indiana is #48 for electricity costs, in other words, IURC is continuing to support expensive electricity generation. By funding new gas plants, IURC will allow Duke to keep us in the dark ages for decades.

Does the Indiana Utility Regulatory Commission want to limit economic development in Indiana by NOT allowing us to get cheaper (and healthier) sources of electricity? Hoosiers don't like that our utilities are not investing in clean energy and are stuck at 96% fossil fuel based electricity!

Finally, people like the cheap electric rates and thus, Texas gets about 1,000 people a day moving to the state. More people are leaving Indiana than coming here.

Today I went to my second IURC hearing in a year. Overwhelmingly, the public spoke in favor of renewables and NOT building more gas plants. When will the IURC listen to what Hoosiers want?

To Whom It May Concern,

I am a Duke Energy customer in Bedford, Indiana. I am also an Indiana native and now retired business executive. I want to note that I am very much in favor of allowing Duke to build new gas fired electric generating stations for Indiana. Many of our old coal generating stations are in need of replacement or updating. Wind and solar electrical generating capacity are not reliable, nor are they sufficient to meet the future needs of our state. We need much more capacity to allow for growth of industry, and we are already behind in our ability to meet the needs pertaining to energy use for datacenters related to growth expected for artificial intelligence research, development and functionality. Please move these projects forward. Thanks for your consideration.

Utilities: Duke Energy Case #46193

Type of Inquiry: Case Comment

Comments: I am contacting you about Duke Energy's case before the IURC, #46193, to provide you with more information about an alternative to replacing coal plants with natural gas plants. As I have already expressed in my testimony before the IURC in Bloomington, IN, I am in favor of closing the coal plants, but opposed to replacement of that generating capacity with plants fueled by gas, another fossil fuel.

By proposing to build gas plants to replace coal plants, Duke leaves out an alternative that is cleaner, faster, and less expensive.

I am asking the IURC and Duke Energy, to consider DISTRIBUTED CAPACITY PROCUREMENT as a means of quickly ramping up the supply of renewable electricity (and batteries) in Duke's territory, faster than it could be done with large utility scale developments (or gas plants), to meet the projected rapidly increasing demand.

Here are some Key Points of why I think Distributed Capacity Procurement would benefit Duke Energy as well as ratepayers:

- It puts utilities in the driver seat for Distributed Energy Resources procurement, especially renewables/batteries .
- Utilities can procure DER like they procure any other energy resource, and it costs them less and is faster than upgrading substations, fixing transformer overload or building new transmission lines, or building utility scale facilities.
- Utilities are good at planning and capitalizing, recovering, and earning on infrastructure investments. They are not good at building lots of small projects.
- In the model of Distributed Capacity Procurement, the work of actually putting DER in communities will be done by an "ecosystem" of local competitive DER companies and vendors, with utilities as wholesale customers.
- After the DER are installed, they are dispatchable for the utility.
- Distributed Capacity Procurement can be viewed as a type of VPP (Virtual Powerplant) that is utility-led, utility-planned, utility-capitalized.
- Clean energy /batteries and other DER become INFRASTRUCTURE, which is just there in the background and individual customers don't have to worry about it.

These are the basic parts to Distributed Capacity Procurement

1) The utility plans and capitalizes DER where they are most valuable (how many and what type..). They put out RFPs establishing where they need what kind of equipment.

2) A middle layer of companies offers deployment services. They go and knock on doors, and instead of trying to sell people a battery or a solar panel, they ask a customer to host a utility asset.

People are offered an annuity from the utility to host the asset.

3) The middle layer companies then make agreements with vendors for the purchase and installation of the equipment. The middle layer companies oversee that work.

I first encountered a detailed exploration of Distributed Capacity Procurement in an almost 2-hour long Volts Podcast from Dec. 18, 2024, entitled "Should we put utilities in charge of distributed energy?" where host David Roberts speaks about this topic with Pier LaFarge of Sparkfund.

The link to the podcast is here: [https://protect.checkpoint.com/v2/r01/\\_\\_\\_https://www.volts.wtf/p/should-we-put-utilities-in-](https://protect.checkpoint.com/v2/r01/___https://www.volts.wtf/p/should-we-put-utilities-in-charge___YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkNThiMmJjOTVhYjZlNTUyMWNjNzg5OGlyYWJkOTNjMjo3OmVmNjU6YjQ1YjFhMGE0NTE4ZTBjODViYjQwMGU1Zjc5ZDhhZW5YmVhZDMxMzVjYzBjYTMzMmM1OTg3NjUwM2NhMTQwNjpwOIQ6Tg)

[charge\\_\\_\\_YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkNThiMmJjOTVhYjZlNTUyMWNjNzg5OGlyYWJkOTNjMjo3OmVmNjU6YjQ1YjFhMGE0NTE4ZTBjODViYjQwMGU1Zjc5ZDhhZW5YmVhZDMxMzVjYzBjYTMzMmM1OTg3NjUwM2NhMTQwNjpwOIQ6Tg](https://protect.checkpoint.com/v2/r01/___https://www.volts.wtf/p/should-we-put-utilities-in-charge___YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkNThiMmJjOTVhYjZlNTUyMWNjNzg5OGlyYWJkOTNjMjo3OmVmNjU6YjQ1YjFhMGE0NTE4ZTBjODViYjQwMGU1Zjc5ZDhhZW5YmVhZDMxMzVjYzBjYTMzMmM1OTg3NjUwM2NhMTQwNjpwOIQ6Tg)

A PDF of the transcript (77 pages) is also available there.

Additional things discussed in the podcast besides what I summarized above:

- o Distributed Capacity Procurement fitting into IRP with no need of enabling legislation.
- o Utility-led DER will focus a lot on batteries
- o Solar /battery systems will be sized to what a building can hold, not to the energy needs of the particular building.
- o How this benefits local vendors of solar and other equipment.
- o How it benefits people/households/companies who host solar and batteries.
- o Software utilities need to do modeling to identify where they need DER.
- o Where in the US this has been used.
- o And more...

Type of Inquiry: Case Comment

Comments: I applaud the plan to eliminate coal-fired power plants. The damage has been both to our climate and health as many suffer from respiratory ailments. However, I strongly feel the replacement should not be another fossil fuel that is not renewable and produces methane gas that is hazardous. The proposal of a cost of \$3B+ is alarming. Alternatives of renewable sources would be less expensive, quicker to implement and, of course, renewable. Asking that the cost be borne by the consumer prior to receiving any benefit after a recent enormous hike in rates is unconscionable. Thousands had their power disconnected in the past year due to inability to pay, and now must deal with not only one but two rate hikes. The current proposal ignores options that are less hazardous, less expensive, and renewable. In so doing it ignores the future health of our environment and children's children. Thank you for examining and questioning this proposal that has deleterious effects on all of us in so many ways.

To whom it may concern:

This most recent request by Duke Energy to raise rates is without merit. Building 2 gas fired plants, using fossil fuels once again, while making converting to solar energy less economic for individual homeowners and business owners, especially after 2032, makes no sense. Let's stop the madness now. Do not approve this expenditure.

Comments: I urge you to grant Duke Energy Indiana's rate increases to cover the cost of changing from coal-fired generation to gas-fired and renewables. I'm not currently a rate-payer to this company; I own its debt instruments, and it is vitally important that the company get rate increases in order to provide robust, clean sources of electricity to its customers.

Thankyou very much for the rate increase for Duke Energy & taking their bribes. On 1000 kilowatts that's \$45 a month & 2000 kilowatts is a \$90 dollar increase a month or \$1080 increase a year. I know each of you got bribed more than that though. I want you to think about senior citizens, the elderly, & disabled. But that's OK as there won't be any AC in hell when you people get there. Oh yeah plus we are going to have to flip the bill for nuclear energy research companies as well!!!!!! But stuff like this is to be expected in Republican controlled states; Republicans only care about themselves & rich corporations. And how much billions in our taxes excess does Indiana have?????!!!!!! The so called Rainy Day fund?????!!!!!! You are out of touch with your people. I long for the day when stupid Indiana residents figure this all out & put the Democrats back in power.

Dear Counselor Bill Fine,

It is hard to believe this massive company cannot find the funds to replace their two coal fired units! Look a little better at your budget and salaries/bonuses of upper management! The public has had to tighten their belt to adapt to this economy, you should too!! I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Vickie Stemper

Dear Counselor Bill Fine,

I am not a rich woman, but I saved for a couple years to put solar panels on my house. They will not pay themselves off for a decade at least, but it was the right thing to do. And now my house is generating more clean energy than we even need.

Duke and its parent company have astronomically more money than I do. Not only could they pay for their own dirty gas plant, they could afford clean energy options like I did. They could easily save everyone money, protect the environment, and diversify their energy portfolio.

Duke hiking our rates AGAIN isn't fair. They'll tack on fees that I'll have to pay even though I won't use any of the power from their gas plant.

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Type of Inquiry: Case Comment  
Comments: My name is Jane Walter, I am a Duke Energy customer, and I live in Bloomington, IN 47401. I am writing to state my **OPPOSITION** to Duke's request to build a new natural gas-fired plant at the Cayuga Generating Facility as detailed in IURC Cause No. 46193.

This new project at Cayuga will NOT be affordable for Indiana consumers for several reasons. Despite the expression of many Hoosier ratepayers' concerns about Duke's proposed 2024 rate increases, the average Indiana consumer must now pay \$19 more for electricity every month. Now Duke wants even more hard-earned Hoosier money that could be better spent on essential needs like food, housing, and healthcare. Moreover, according to Duke Energy estimates the new gas-powered plant at Cayuga will cost at least \$ 3.33 billion and perhaps up to 30% more. This figure is HUGE, and it is comparable to Duke's infamous Edwardsport boondoggle a decade ago! For me, the hardest and least affordable costs for the consumers of a new natural gas-fired plant will be the increased medical bills for Hoosier consumers and their loved ones by continuing Duke's reliance on **DIRTY FOSSIL FUELS** to generate electricity in Indiana. What is the incentive for Duke Energy to ever invest more in Hoosiers' health and well-being by increasing its use of **RENEWABLE ENERGY** to generate electricity in our state?

In sum, I **RESOUNDINGLY OPPOSE** Duke Energy's proposal for a new natural gas-fired plant at Cayuga.

Utilities: Duke Energy

Type of Inquiry: Case Comment

Comments: I am a Duke Energy customer writing in **STRONG OPPOSITION** to Duke Energy's request to build two new gas-powered plants at the Cayuga Generating Facility as outlined in Cause #46193.

Under current Indiana law, Duke Energy must adhere to the Five Pillars of Electric Utility Service: reliability, resilience, stability, affordability, and environmental sustainability.

With a projected 35-year lifespan, the proposed gas-powered plants cannot be considered "reliable, resilient, or stable" due to the growing availability and volatile cost of fossil fuels. It is stupid and irresponsible for Duke and Indiana to invest in utilities that will only become more expensive and difficult to operate as shortages of fossil fuels increase.

The proposal is also not affordable nor is the proposed rate of recovery reasonable. Duke just raised customer rates in 2024 and now they are proposing to raise rates again making customers foot the bill even before the units are finished. By their own admission the cost of \$3.33 billion could increase by 30% over the multi-year construction period. Why should we consumers subsidize this risky initiative when their shareholders and CEOs continue to reap enormous profits? We have no guarantee from them that OUR investment in THEIR future will even be completed. At this point, they are asking us to pay for a phantom when many customers are already struggling to pay for the reality of their current energy needs.

Lastly, the project is not environmentally sustainable. Definitely, the aging coal plants must be retired as soon as possible, but the proposed gas-fired units would be just as bad since they will release carbon monoxide, particulate matter, and VOCs into the air. The IURC should not even consider ANY gas utility construction by Duke until it has increased its solar and wind energy utilities which currently make up less than 2% of their portfolio. With the global climate crisis we are facing and with new, advanced green energy technology available, it is not only irresponsible but also immoral for the IURC to even consider Duke's request. The IURC should sharply rebuke Duke for wasting the taxpayer's time with this unacceptable proposal and demand that they expand their wind, solar, and battery storage options as their sole and immediate course of action.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
John Blevins  
1312 S 16th St  
Richmond, IN 47374

Dear Counselor Bill Fine,

Remember 75° summers? I do.

But it's been a while since comfortable summer days were the norm.

Look around, call it what you will. Our climate is changing and we have an opportunity to slow the decline in our quality of living, but

\*we have to actually do something.\*

Storms are getting worse and more frequent. Who ever heard of an atmospheric river in the Midwest??

I am fundamentally outraged that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant short term profits for Duke's shareholders, but in the long term, they and their grandchildren still live on this warming globe.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with

\*solar, especially as parking lot shade structures,

\*wind turbines

\*battery storage, as electricity or as pure heat like the sand silo projects in Finland

\*geothermal heat pumps for homes and business campuses

There's a real opportunity here to help the global situation, for your own comfort and for the health and safety of your family.

Please do everything you can to stand up for 75° summers and REJECT Duke's request in Cause Number 46193.

Most sincerely yours,

Judy Owens  
Monroe County Republican

Dear Counselor Bill Fine,

As utility companies rake in healthy profits, many Hoosiers are forced to make tough decisions every day. Our Governor is putting in helipads, Lieutenant is purchasing Tesla trucks and our taxpayers are continuing to take the brunt of their wreckless choices. Nearly every bill you all vote on today will remove more and more of Hoosiers ability to survive.

People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels. Please reject any bills brought forward by utility lobbyists and listen to your constituents!! We live in Indiana for our green space, our low key lives, our small business friendly environment and our low cost of living. Today you must realize you face upending all of that and continuing to line billionaires pockets.

Dear Counselor Bill Fine,

This is the definition of insanity! Everyone knows that renewable wind and solar resources are plentiful in Indiana, yet Duke insists on lining their friends' pockets by continuing the invest in EXPENSIVE and DIRTY fossil fuels. It's time to move Indiana into the 21st century, away from fossil fuels and toward renewable, sustainable energy!

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am strongly in favor of clean renewable energy sources in Indiana. I oppose the building of a new gas plant in Indiana! The time for renewables is now!

The climate crisis is REAL. Your actions now will affect the lives of our children and grandchildren. We must all do everything we can to protect the beautiful Earth and our children's future.

Thank you, Susan and Pat Medland

Dear Counselor Bill Fine,

I am very disappointed to have my electric bill go up this year, when my house is powered by all my own electricity that I create with solar power. I create more than I can use. To their benefit. They got rid of net metering which is incomprehensible! We do not need more gas or coal power. We have tried it and it's gross. Bring back net metering and make them use renewable sources. NO MORE INCREASES.

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Abigail Reamer

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Brian Reynolds

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Catherine Elstun

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Danny Salyers  
14658 Chesterville Rd

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Dave Burton

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Eugene Martin

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Greg Rambicure  
13214 Dunwoody Ln

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
John Conrad  
361 N Meridian St  
Marengo, IN 47140

Dear Counselor Bill Fine,

Not good! My bill just went up over \$100 a month and we have worked hard to use less energy. People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Jon Leach

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Mark Kesner

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Melissa mount

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Penny Leach

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Randy Fletcher

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Rebecca Walls

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Tamra McCullough

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Wayne Johnson  
400 W Terrace Dr Trlr 14  
Bloomington, IN 47403

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
William Stanton

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Cherri Seals

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Chris Quillen

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Cynthia Blevins

CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Douglas Poindexter  
347 N County Rd 25 W  
New Castle, IN 47362

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
James Nunamaker

CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jim Rosebrough  
613 Conner Creek Dr  
Fishers, IN 46038

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kimberly Kirkwood

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Lauren julian

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Michael Douglas  
321 E Glendora Dr

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Paul Holmes

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Rachel Croucher

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ruth Bowman  
601 E Indiana Ave  
Spencer, IN 47460

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Sally Lewis

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Timothy Robinson  
354 S California St  
Jasonville, IN 47438

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Tina Pannone  
13999 Livingston Rd  
Aurora, IN 47001

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
ANNITA MASON

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme over-reliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Antonia Matthew  
1307 S Grant St

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Carol Dunfee

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Carolyn Long  
307 Birch Dr

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Daniel Sprouse

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Danny JACKSON

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Erlinda Bailey  
706 W Conwell St  
Aurora, IN 47001

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Gregory Wood

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Judi Culy

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Judy Welke  
1506 Michigan Rd  
Franklin, IN 46131

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,

With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Km Mk  
187 Charlotte Ave  
Switz City, IN 47465

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Lana Mitchell

I am not against Duke replacing one fossil fuel with another as this approach appears to be in line with what we have the most of. However, if they elect to make the change it should be on their dime and not ours. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. If Duke's overreliance on fossil fuels generates significant profits for Duke's shareholders that is great but again it should be on their dime and not ours. It should NOT be passed on the customer's wallet.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Mary Ellenbrand

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Mary Morgan

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Michael bell

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Rachel Ford  
3838 S 9th St  
Lafayette, IN 47909

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Sharon Lilley  
317 W Front St  
Cambridge City, IN 47327

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Shelley Chandler

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Sherri Mitchell

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

Before Duke undertakes any further expansion it must submit to a DOGE type audit and agree to trim down identified waste and or inefficiencies. Further a legitimate and honestly study currently of available solar, wind and nuclear technology as compared to natural gas and Clean coal technology including solar, wind and nuclear maintenance disposable and recyclable cost at end of life of solar panels and turbine parts.

Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Duke must submit to a ongoing audit of expenses including contract completion dates, penalties for beyond completion dates and closely monitored payments.

CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Todd Vostry

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Tom Meyer  
2721 N County Rd 875 E  
Poland, IN 47868

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Tomilyn Venaglia

Dear Counselor Bill Fine,

No. No. No. No. I'm sick and tired of all these requests for rate increases. Take the money out of the CEO pay. Do you think my SS will go up \$19 a month to cover this? No. I keep turning my thermostat down and even shutting off my water heater for days at a time, and yet my bills keep increasing. So No. No. No.

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Beverly Schulz

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Bob Cook  
630 N 600 W  
Greenfield, IN 46140

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Colleen Gibbons  
307 Hickory Hill Dr  
Terre Haute, IN 47802

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Douglas Whallon  
2374 W Dugger Ave  
West Terre Haute, IN 47885

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ernest Martin

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jaline Spurgeon  
621 S Sugar St  
Brownstown, IN 47220

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
James Brown

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Jo James

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Kara cradic

Dear Counselor Bill Fine,

It is RIDICULOUS to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Karen Darnell

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Linda Warner  
5811 N Pennsylvania St  
Indianapolis, IN 46220

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Lisa Boring

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Melisa OConnor

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Michael Rinehart

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Misty Tuttle

Also, look into the contract for the last few years with Wright Tree Service and now a new company to constantly trim and cutdown trees anywhere near powerlines. I suspect DUKE is giving the Tree Trimming companies a kickback to contract with them for annual tree trimming. Never in the past did DUKE own/hire a tree company annually to proactively trim every year.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
richard olvera

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Rick Phillips

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Robert Matlock

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Ryan Pettit

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Sheila Battle

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Taylor Jefferson

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Teresa VerMaas

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Thomas Devlin  
211 S 5th St

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Barbara McKinney

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Beth Trzcinski

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Christin Nevins

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Christopher Lehman  
1582 Mona Vista Ct

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Claudia haaning

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
David Quinn

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Gloria Sitzes  
2323 W King St  
Kokomo, IN 46901

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Greg Riker

Dear Counselor Bill Fine,

No more rate hikes! Duke is a successful business and can use it's money to pay for new projects. They reap the financial rewards, yet want Hoosiers to foot the bill. We can't. Hoosiers are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jim Persinger

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

Now and then, the fact that we pay our electric bill to Duke--which relies on fossil fuels--smacks of irony! Yet, never so much as now, with Duke proposing another coal plant, costing more than \$3.3 billion. With the state legislature complicit, we will pay for it before it's built causing more pollution, health risks and damage to the earth. Now is the time to propose renewable sources of energy such as wind and water, not new ways to contribute to climate change with the good people of Indiana stuck with the bill on top of last year's \$19/month rate hike. Duke should hear a resounding NO at the hearing next week! Enough is enough!  
Please reject Duke's request in Cause Number 46193.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Kenneth Kish

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kim Piazza  
7251 E Devonald Ave  
Terre Haute, IN 47805

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Kresha Hicks

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Laura Parker

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Dear Counselor Bill Fine,

I want to lend my voice to all of the folks who are already financially tapped out, due to the rising costs of living. I believe there could be a third alternative to Duke's plan to convert and modernize their power generating facilities, which would include spending within their means and purchasing power from partner generators, during peak demand periods.

If their request is approved, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Mark Cripe

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Markus Coonce

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Mike Thomas

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Misti Carmina  
5250 Berkshire North Blvd  
Greenwood, IN 46142

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Phyllis Keene

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Richard Gawthrop

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Rosie Dunasky

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Susan Edmondson

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Suzanne Scheidler  
1091 Latonia Ln  
Indianapolis, IN 46280

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
BOBBY KILLEBREW

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Brenda Barrett  
500 E 8th St

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Brenda Masters

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Cheryl Nichols  
2714 Farrington St  
Terre Haute, IN 47803

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Christina Hall  
109 Ravine St  
Lafayette, IN 47905

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Christine Traylor

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Dawn Green

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Dawn Hillebrand

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Went to a play lastnight ! The Duke Show Starring Vermilion County Commissioners & guests appearance by Tim Yocum. Vermillion county school superintendent. Black Diamond Fire Chief & Wives of Duke Employees ! They told Indiana utility Regulatory Commission That the people of vermilion county would gladly pay for Dukes new \$ 3.3 billion project ! Yes friends about 15 people spoke for you !!!! All for Duke.

I don't know about you but they just gave duke a \$395 million that I didn't want to pay for ! A week later they filed for 3.3 billion more !!! Did you know that duke is worth \$77.77 billion ! If you could actually make your voice heard would you ? I would like to know ? It's not too late. ! \$395 millon raised your bill \$20 Just Think what \$3.3 billion is gonna raise it ?

This is what I saw at Your Meeting that was held at IV Tec Terre Haute !! Not one rebuttal from Vigo & Vermilion County's ??? It was not publicised no one knew about this meeting as you can tell ! I think you should have Another One in TH & Make it known ! This was a fraud meeting ! Travesty Of Justice. I am a Concerned Citizen !!!! Donald Bohannon. People have a right to know & express their opinion ! 15 people do not make up 2 countys ! I bet 94% people are against this !!!! If you have conscience in a heart you should vote no I vote no

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Frederick McGuire  
1322 E Victoria St  
South Bend, IN 46614

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Gail Parish  
1233 Ridgeway Dr  
Jeffersonville, IN 47130

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Gayle bowers

Please reject Duke's request in Cause Number 46193.

They already charge "delivery fee" that is higher than the gas bill.

WE ALREADY PAY FOR THEIR ELECTRIC METER. Last I checked was \$10 a month. I pay for them to NOT HAVE A METER READER. That should be illegal. Don't mind the meter, but why do I have to pay for their not having people read it?

Thank you,

With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Janet Demyan

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Jean Minter

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Katherine Atkinson

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Kaye Rish  
123 W Coal St  
Bicknell, IN 47512

I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Lynn Howell  
3423 S Parkside Dr

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Marcia Burnett

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Michael Feighner

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Monica Cannaley

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Regina Watson  
2324 Morris Rd  
Indianapolis, IN 46217

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

To whom it may concern:

I am writing both as an elected official and a lifelong resident of Vermillion County. Since coming to Vermillion County beginning with construction in the 1960's, Duke (formerly Public Service Indiana) has been a blessing to Vermillion County providing many high paying jobs, a great retirement provider for many of our residents, and a substantial contributor to our property tax income for the county. If this plant can be saved, along with all the benefits it has for Vermillion County, there should be no reason to obstruct the gas fired project going forward.

Those who oppose this upgrade in favor of "green" energy have no idea what it is for residents to live in and around the wind farms and solar farms. The cost and very short life span of windmills and solar panels - especially the clean up and disposal of equipment cost in 20 or 30 years including the unrecoverable damage to the land - make green projects of this nature, with the current technology, proven track records of failure, and poor performance, just dumb.

I understand a new rate went into effect - that was for infrastructure - very, very outdated and unprotected infrastructure that needed to be secured for the safety of our country. The rate increase for the investment and amount of energy produced will be minimal - at this point in time : expected to be less than two dollars a month (\$2.00 per 1 month!).

We cannot - must not - saddle future generations with technology that outdates itself as fast as it is built. Someday we may be ready and can provide undisputed long term plans for renewable energy - but not now. Everyday there is new information in the news about newer, better, more efficient technology than what wind mills, solar panels, and battery farms offer at this time. We are not ready to convert to long term green energy.

Please approve the project.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Samantha Ostler

Dear Counselor Bill Fine,

As Duke Energy and their parent company rake in healthy profits, many Hoosiers are forced to make tough decisions every day. People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

Regards,  
Sandra McClain

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Sarah Herron

People have to choose whether to pay for groceries, medicine, or their electric bill. Whether to run their air conditioning or suffer through the heat. Whether to pay their landlord or Duke. We heard as much throughout the public hearings for Duke's 2024 rate case, and that was before folks saw their Duke bills increase by \$19/month from the rate hike they just got.

It's appalling that Duke is already back at the IURC asking for even more of our money, a whopping \$3.3 billion. And it's alarming that the \$3.3 billion is the floor and not the ceiling.

First off, since Duke wants to build a huge gas plant, we know that customers will be on the hook for additional future rate hikes to pay for pipelines, operations & maintenance for the plant, and the fuel to run it.

But that's not all, thanks to Construction Work in Progress, granted to Duke by the Indiana General Assembly. CWIP shifts construction risks away from utilities and their shareholders and onto the backs of captive customers like me. With CWIP, Duke has no incentive to keep costs low because they can pass costs directly onto customers. We've already seen the impact of CWIP with Duke's own Edwardsport plant: cost overruns totaling \$1.5 billion. Please don't force us to repeat that experience!

Please reject Duke's request to hike our bills for a dirty gas plant in Cause Number 46193. Please push Duke to adopt cheaper, cleaner options that will help reduce its extreme overreliance on dirty and expensive fossil fuels.

When you live on a fixed income like disability, every penny counts. My rent went up \$100 more this year and that made things even harder. There is no help for gas to get to all my Drs appointments, so Duke raising their costs will also cut into that.

Dear Counselor Bill Fine,

People are already having a tough time coping with huge increases in the cost of everything we need to survive: energy, food, housing, and healthcare.

Now, Duke customers will be forced to pay another \$19/month due to the rate increase approved earlier this year. I am anxious about how much bills will increase if Duke's newest \$3.3 billion request is approved as well. I am urging you to please do everything you can to reject Duke's request in 46193.

We all know that this huge gas plant could end up costing dramatically more than \$3.3 billion because of Construction Work in Progress (CWIP) approved by the Indiana General Assembly. CWIP means that Duke gets to pass construction costs onto customers like me before the plant produces any energy, which means they have no incentive to keep costs down.

We also all know what happened the last time Duke used customers as a blank check with CWIP: the Edwardsport power plant went \$1.5 billion over budget and ended up costing a whopping \$3.5 billion. I am not looking forward to seeing how much Duke will go over budget with this new gas plant.

Please stand up for Duke customers like me by rejecting Duke's \$3.3 billion request. Please push Duke to adopt cleaner and more affordable options that move Duke away from their extreme overreliance on fossil fuels.

Investments in energy efficiency, renewable energy, and battery storage will help Duke to diversify its generation portfolio and save us money. We simply can't afford any more increases. Unlike Duke and their parent company - one of the largest energy holding companies in the entire country - Hoosiers aren't rolling in the dough.

Please reject Duke's request in Cause Number 46193.

Thank you,  
Terry Dorsett

Dear Counselor Bill Fine,

I am troubled to see Duke file for a \$3.3 BILLION project right after receiving approval to collect another \$244 million from us every year. If a \$244 million rate increase raises my bills by \$19/month, I am horrified to imagine what a \$3.3 billion request will do.

I am also really disappointed by the fact that Duke wants to replace one fossil fuel with another. This makes no sense. Duke is already almost exclusively reliant on fossil fuels: 96% of their electricity generation came from coal and gas in 2023. This stubborn overreliance on fossil fuels may generate significant profits for Duke's shareholders, but it's harming customer wallets and our environment.

I would like to see the OUCC and the IURC push Duke to increase investments in energy efficiency and replace the Cayuga units with solar, wind, and battery storage. This would help save us all money and help our environment. Unlike fossil fuels, renewables and efficiency do not require fuel to operate, which generates cost savings and reduces a big affordability risk to Hoosier households, as natural gas prices are notoriously volatile.

On top of everything said above, some of us cannot afford to pay any more than we already are.

Please do everything you can to stand up for Hoosiers and REJECT Duke's request in Cause Number 46193.

Respectfully,  
Tonya Drew
