**July 2, 2019**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

**DIRECT TESTIMONY OF TIMOTHY A. ABBOTT  
DIRECTOR OF SYSTEM OPERATIONS  
DUKE ENERGY BUSINESS SERVICES LLC  
ON BEHALF OF DUKE ENERGY INDIANA, LLC  
BEFORE THE INDIANA UTILITY REGULATORY COMMISSION**

**I. INTRODUCTION**

1

2 **Q. PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

3 A. My name is Timothy A. Abbott, and my business address is 139 East 4<sup>th</sup> Street,  
4 Cincinnati, Ohio.

5 **Q. BY WHOM ARE YOU EMPLOYED AND IN WHAT CAPACITY?**

6 A. I am employed as Director of System Operations by Duke Energy Business  
7 Services LLC, a service company subsidiary of Duke Energy Corporation (“Duke  
8 Energy”), and a non-utility affiliate of Duke Energy Indiana, LLC (“Duke Energy  
9 Indiana” or “Company”).

10 **Q. PLEASE DESCRIBE YOUR RESPONSIBILITIES AS DIRECTOR OF**  
11 **SYSTEM OPERATIONS.**

12 A. My primary responsibility as Director of System Operations is to provide  
13 leadership for the Transmission Control Centers of Duke Energy Indiana, and  
14 Duke Energy Ohio / Kentucky.

15 **Q. PLEASE DESCRIBE YOUR EDUCATIONAL AND PROFESSIONAL**  
16 **BACKGROUND.**

17 A. I have a Bachelor of Science Degree from Miami University. I have over 28  
18 years of experience with Duke Energy in a variety of roles of varying

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 responsibility. I have spent the last 21 years in System Operations serving in  
2 various capacities related to control room operations, North American Electric  
3 Reliability Corporation (“NERC”) Compliance, Regional Transmission Operator  
4 policy and governance, Tariff Administration, and Energy Accounting.

5 **Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS**  
6 **PROCEEDING?**

7 A. The purpose of this testimony is to describe the various aspects of the Duke  
8 Energy Indiana transmission system, including planning, operating, reliability,  
9 and the prudence of the related costs. I also describe and support the transmission  
10 capital and operations and maintenance (“O&M”) expenditures used in the  
11 forecast.

12 **II. DUKE ENERGY INDIANA’S TRANSMISSION SYSTEM**

13 **Q. PLEASE DESCRIBE DUKE ENERGY INDIANA’S TRANSMISSION**  
14 **SYSTEM.**

15 A. Duke Energy Indiana’s transmission system is jointly owned with Wabash Valley  
16 Power Alliance, and Indiana Municipal Power Agency. It consists of 723 circuit  
17 miles of 345 kV, 653 circuit miles of 230 kV, 1,391 circuit miles of 138 kV, and  
18 2,521 circuit miles of 69 kV. The transmission system also consists of  
19 approximately 500 stations and substations, which are interconnected with a  
20 variety of transmission and distribution circuits. The transmission system,  
21 particularly at voltages greater than 100 kV, acts to transfer power from sources to  
22 loads, including the distribution system. The Duke Energy Indiana transmission

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
 DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 system is under the functional control of the Midcontinent Independent System  
 2 Operator, Inc. (“MISO”), and is part of the interconnected transmission system  
 3 that safely, efficiently, and reliably transports power to customers in the Eastern  
 4 United States.

5 **Q. PLEASE EXPLAIN HOW THE TRANSMISSION SYSTEM HAS**  
 6 **CHANGED SINCE DUKE ENERGY INDIANA’S LAST BASE RATE**  
 7 **CASE.**

8 A. Table 1 provides a breakdown of the changes to Duke Energy Indiana’s  
 9 transmission system.

10 **Table 1:**

<b>T&amp;D Asset</b>	<b>2002</b>	<b>2018</b>
Number of Transmission Substations	114	106
Number of Distribution Substations	394	394
Transmission substation MVA capacity	22193	22983
Distribution substation MVA capacity	6753	9411
Number of Transmission Circuit Miles	5361	5288

11 As can be seen in Table 1, Duke Energy Indiana continually seeks to  
 12 improve the system by identifying efficiencies and consolidating facilities, where  
 13 appropriate. An example of this may be retiring a small substation and serving  
 14 those circuits from a new or existing substation with consolidated functions.  
 15 Additionally, since 2002 the Company replaced its engineering database with GIS  
 16 data, leading to a changing in the number of transmission circuit miles.

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 **Q. PLEASE EXPLAIN HOW DUKE ENERGY INDIANA’S TRANSMISSION**  
2 **SYSTEM IS INTERCONNECTED WITH THE TRANSMISSION SYSTEM**  
3 **OF OTHER ELECTRIC UTILITIES.**

4 A. Duke Energy Indiana’s transmission system has a significant number of  
5 interconnections, with Ameren, Vectren, American Electric Power, LGE Energy,  
6 Hoosier Energy, NISource, Duke Energy Ohio, and Indianapolis Power & Light  
7 Company. These interconnections allow for the free flow of energy across the  
8 system, and contribute to the stability of all interconnected systems.

9 **Q. PLEASE DESCRIBE THE OVERALL CONDITION OF DUKE ENERGY**  
10 **INDIANA’S TRANSMISSION PLANT.**

11 A. The Duke Energy Indiana transmission system is comprised of a wide variety of  
12 equipment of varying vintage, as would be expected of a utility that is over 100  
13 years old. Duke Energy Indiana maintains the transmission system utilizing good  
14 utility practice. The system operates as designed, and provides safe, reliable and  
15 efficient service for the connected customers, including the various distribution  
16 systems. Recently, considerable capital has been invested into the transmission  
17 system via the Company’s Transmission, Distribution, and Storage System  
18 Improvement Charge (“TDSIC”) plan, which was approved by the Indiana Utility  
19 Regulatory Commission in Cause No. 44720 (“TDSIC Plan”). These  
20 improvements consist of things such as new substation equipment, rebuilt lines,  
21 and steel poles.

**III. MISO**

**Q. WHAT IS MISO?**

A. MISO is a Regional Transmission Organization, and Market Operator, that has functional control of Duke Energy Indiana’s Bulk Electric System via the MISO Open Access Transmission Tariff.

**Q. HOW DOES DUKE ENERGY INDIANA PARTICIPATE IN MISO?**

A. Duke Energy Indiana is a Transmission Owner and market participant in MISO. Duke Energy Indiana has transferred functional control of its Bulk Electric facilities to the MISO. Duke Energy Indiana is also a Generation Owner and Operator, and a Market Participant, and has load connected to the MISO system.

**Q. DOES DUKE ENERGY INDIANA RECEIVE CHARGES FOR MISO PARTICIPATION? IF SO, PLEASE EXPLAIN.**

A. Yes. Duke Energy is charged administrative fees for participating in MISO.

**Q. DOES DUKE ENERGY INDIANA RECEIVE REVENUES FOR ITS MISO PARTICIPATION? IF SO, PLEASE EXPLAIN.**

A. Yes. Duke Energy Indiana receives revenue associated with the use of the Duke Energy Indiana transmission system by other companies. The revenues are based on MISO tariffed rates, as approved by the Federal Energy Regulatory Commission (“FERC”).

**Q. HOW IS DUKE ENERGY INDIANA’S TRANSMISSION SYSTEM PLANNED AND OPERATED?**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 A. Duke Energy Indiana is a transmission owning member of MISO. MISO is  
2 largely responsible for planning the Duke Energy Indiana transmission system  
3 using processes that are compliant with FERC Order 890. As a matter of  
4 compliance with FERC order 890, Duke Energy Indiana participates in MISO  
5 stakeholder forums that provide transparency and facilitate customer feedback as  
6 a normal part of planning. Duke Energy Indiana also provides for stakeholder  
7 feedback in the development of supplemental projects (*i.e.* those not assigned by  
8 MISO), such as those being undertaken as part of the Company's TDSIC Plan.

9 Duke Energy Indiana, in conjunction with MISO, operates the  
10 transmission system in accordance with NERC Reliability Standards and  
11 requirements, and good utility practice. This allows us to provide all customers  
12 with safe efficient and reliable, and cost effective service.

13 **Q. DOES DUKE ENERGY INDIANA CURRENTLY TRACK FOR**  
14 **RECOVERY FROM ITS RETAIL ELECTRIC CUSTOMERS CERTAIN**  
15 **COSTS AND TRANSMISSION REVENUES RELATED TO MISO?**

16 A. Yes. These costs are tracked through Standard Contract Rider No. 68 ("RTO  
17 Rider"). Adjustments under the RTO Rider are made on an annual basis in Cause  
18 No. 42376.

19 **Q. WHAT COSTS ARE RECOVERED THROUGH THE RTO RIDER?**

20 A. Costs collected through the RTO Rider generally include MISO management  
21 costs, certain MISO transmission revenues, and other RTO related costs.

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 **IV. TRANSMISSION EXPENDITURES**

2 **Q. WHAT MAJOR FACTORS DRIVE THE NEED FOR TRANSMISSION**  
3 **INVESTMENT?**

4 A. Transmission investment is needed for a variety of reasons. Baseline reliability  
5 projects allow the system to be compliant with NERC criteria. Market efficiency  
6 projects provide for a more economic delivery of energy to load. Multi-value  
7 projects in MISO allow for such things as the delivery of wind energy from  
8 remote locations to load centers. Projects for operational flexibility allow the  
9 Company to enhance reliability when certain elements are out of service.  
10 Capacity enhancement facilitates serving organic load growth and customer  
11 related projects (typically related to adding new large customers to the system) are  
12 some of the major categories. Duke Energy Indiana also undertakes projects to  
13 enhance the reliability and resiliency of the system, and increase its operational  
14 flexibility.

15 **Q. IS THE NEED FOR TRANSMISSION INVESTMENT UNIQUE TO DUKE**  
16 **ENERGY INDIANA?**

17 A. No. Virtually every region in North America, is in the process of actively  
18 investing in transmission systems for the reasons mentioned above.

19 **Q. HOW IS DUKE ENERGY INDIANA SEEKING TO LEVERAGE**  
20 **TECHNOLOGY TO MORE EFFICIENTLY MANAGE TRANSMISSION**  
21 **SYSTEM ASSETS?**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 A. Duke Energy Indiana is in the early stages of implementing a Health and Risk  
2 Management (“HRM”) program for its transmission system. HRM utilizes  
3 machine learning and artificial intelligence, allowing equipment to be managed  
4 based on a statistically driven program and schedule, rather than a time and failure  
5 driven schedule. HRM will allow us to more efficiently deploy financial and  
6 human resources to address equipment, while also providing a mechanism to  
7 intelligently predict and respond to probable asset end of life, rather than react to  
8 its failure.

9 **Q. HAS DUKE ENERGY INDIANA RECENTLY REMODELED ITS**  
10 **TRANSMISSION CONTROL CENTER?**

11 A. Yes, the Company upgraded the Plainfield control center in 2017.

12 **Q. WHAT BENEFITS HAS DUKE ENERGY INDIANA DERIVED FROM**  
13 **THE REMODELING OF THE TRANSMISSION CONTROL CENTER AT**  
14 **THE INDIANA REGIONAL HEADQUARTERS IN PLAINFIELD**  
15 **INDIANA?**

16 A. The new center improves the ergonomic and environmental comfort of the  
17 System Operators, enhances access to tools, and provides more situational  
18 awareness information. The simulator and training space dramatically improves  
19 the training experience for our System Operators and the support space adjacent  
20 to the control center locates key support personnel in close proximity to the  
21 control center.

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 Q. WHAT WAS THE AMOUNT OF INVESTMENT.

2 A. The capital cost of the center for 2015-2018 was \$22.4 million.

3 Q. HAS DUKE ENERGY INDIANA INVESTED IN NEW FACILITIES FOR  
4 THEIR CONSTRUCTION AND MAINTENANCE CREWS?

5 A. Yes.

6 Q. WHAT WERE THE RESULT OF THESE FACILITY INVESTMENTS?

7 A. The facility investments increased the number of transmission crew headquarters  
8 from two to six. Prior to this expansion, transmission crews were headquartered  
9 in Columbus and Kokomo and all inventory was located in Plainfield. Simple  
10 logistics created challenges for responding to certain outages, as crews and  
11 materials could be located hours away. In our current, expanded configuration,  
12 we have transmission crews located in Columbus, Kokomo, Greencastle,  
13 Noblesville, Bloomington, and Vincennes. In addition to transmission crews,  
14 these locations have areas for “storm stock”, such as poles, cross arms, and  
15 insulators, which will facilitate faster storm restoration times.

16 Q. HOW WILL THESE INVESTMENTS PROVIDE BENEFITS TO  
17 CUSTOMERS.

18 A. Customers benefit primarily through reduced outage times, as crews and materials  
19 are now more evenly distributed throughout the service territory.

20 Q. DID DUKE ENERGY INDIANA CREATE A TRAINING FACILITY FOR  
21 TRANSMISSION CONSTRUCTION AND MAINTENANCE CREWS?

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 A. Yes, Duke Energy Indiana constructed a training facility in Shelbyville. The  
2 Company began conducting training sessions at this location in 2017.

3 **Q. WHAT ARE THE BENEFITS OF THE NEW TRAINING FACILITY?**

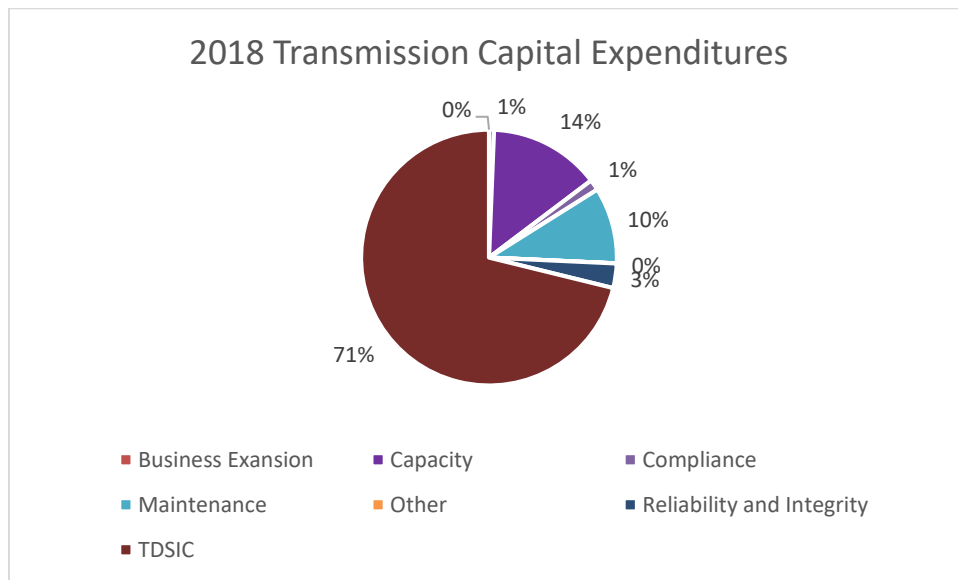

4 A. The training facility in Shelbyville provides a central location where transmission  
5 resources can gather for classroom instruction and/or field training. The  
6 classroom provides computers and audiovisual equipment, with the outdoor  
7 laboratory area providing examples of substation and line equipment for the  
8 purpose of training our technicians.

9 **Q. WHAT WAS THE AMOUNT OF TRANSMISSION EXPENSE IN 2018?**

10 A. Total transmission Operations and Maintenance (“O&M”) expenditure in 2018  
11 was \$98 million. Total capital expenditures in the transmission system totaled  
12 \$174 million in 2018. The figure below provides a breakdown of Duke Energy  
13 Indiana’s 2018 transmission related capital expenditures.

14

**Chart 1:**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 In the transmission system, approximately 71% of investment was driven by the  
2 TDSIC program, which consists of transmission substation and transmission line  
3 improvements. Examples of this investment include the replacement of  
4 deteriorated wood poles and replacement of obsolete substation and line  
5 equipment. Approximately 13% of investment was driven by reliability  
6 improvement and maintenance programs (excluding TDSIC). Examples of this  
7 type of investment include vegetation management, service restoration, line  
8 relocations and the replacement of obsolete substation and line equipment that are  
9 not part of TDSIC. The Spill Prevention, Containment and Countermeasures  
10 (“SPCC”) program is also part of this segment. Approximately 14% of  
11 investment was driven by capacity requirements to serve load and to meet the  
12 NERC Planning Standards. Approximately 1% of investment was driven by  
13 compliance projects. Examples of this type of investment include physical and  
14 cyber security projects.

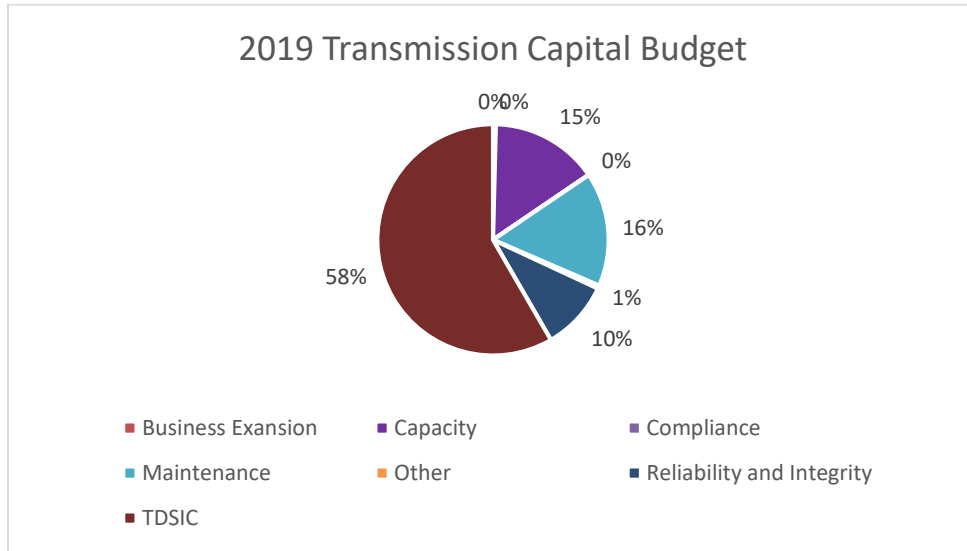

15 **Q. WHAT IS DUKE ENERGY INDIANA’S FORECASTED AMOUNT OF**  
16 **TRANSMISSION EXPENSE IN 2019?**

17 A. Duke Energy Indiana forecasts \$104 million in O&M transmission expense in  
18 2019. Total capital investment in the transmission system is projected at \$136  
19 million in 2019. The figure below provides a breakdown of Duke Energy  
20 Indiana’s 2019 transmission related capital expenditures.

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1

**Chart 2:**

2

Approximately 58% of investment is driven by the TDSIC program, which

3

consists of transmission substation and transmission line improvements.

4

Examples of this investment include the replacement of deteriorated wood poles

5

and replacement of obsolete substation and line equipment. Approximately 26%

6

of investment is driven by reliability improvement and maintenance programs

7

(excluding TDSIC). Examples of this type of investment include the vegetation

8

management, replacement of deteriorated wood poles and replacement of obsolete

9

substation and line equipment. Approximately 16% of investment is driven by

10

business expansion and capacity requirements to serve load and to meet the

11

NERC Planning Standards.

12

**Q. WHAT IS DUKE ENERGY INDIANA'S FORECASTED AMOUNT OF**

13

**TRANSMISSION EXPENSE IN 2020?**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
 DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 A. Duke Energy Indiana projects \$99 million in O&M transmission expense in 2020.  
 2 Total capital investment in the transmission system is projected at \$153 million in  
 3 2020. The figure below provides a breakdown of Duke Energy Indiana’s 2020  
 4 transmission related capital expenditures.

5 **Chart 3:**

6 For 2020 projection, approximately 55% of investment is driven by the TDSIC  
 7 program, which consists of transmission substation and transmission line  
 8 improvements. Examples of this investment include the replacement of  
 9 deteriorated wood poles and replacement of obsolete substation and line  
 10 equipment. Approximately 28% of investment is driven by reliability  
 11 improvement and maintenance programs (excluding TDSIC). Examples of this  
 12 type of investment include the vegetation management, replacement of  
 13 deteriorated wood poles and replacement of obsolete substation and line  
 14 equipment. Approximately 10% of investment is driven by capacity requirements

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
 DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 to serve load and to meet the NERC Planning Standards, and approximately 7%  
 2 of investment is business expansion to construct the new Mitchell Lehigh  
 3 substation

4 **Q. PLEASE EXPLAIN HOW DUKE ENERGY INDIANA’S TRANSMISSION**  
 5 **O&M AND CAPITAL COSTS HAVE CHANGED FROM 2018-2019 AND**  
 6 **FROM 2019-2020.**

7 A. As can be seen in Table 2 below, there is a \$6 million increase from 2018 to 2019.  
 8 This was caused by lower than anticipated spend for MISO Schedule 17 and 2.  
 9 The \$5 million decrease between 2019 and 2020 is the result of decreased funding  
 10 for MISO Schedule 2 to align with projected spend level.

11 **Table 2:**

<i>\$ in Millions</i>	2018 A	2019 B	2020 F
Transmission O&M	\$98	\$104	\$99
Increase / (Decrease)		\$6	(\$5)

12 The difference in transmission capital expenditures between 2018, 2019, and  
 13 2020, as can be seen in Table 3, is the result of project timing in the Company’s  
 14 TDSIC plan.

15 **Table 3:**

<i>\$ in Millions</i>	2018 A	2019 B	2020 F
Transmission Capital Expenditures	\$236	\$136	\$153
Increase / (Decrease)		(\$100)	\$17

16 **Q. DID YOU PROVIDE THE 2020 TRANSMISSION O&M AND CAPITAL**  
 17 **EXPENDITURES REFLECTED ABOVE TO WITNESS MR.**

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1           **CHRISTOPHER M. JACOBI FOR INCLUSION IN THE DUKE ENERGY**  
2           **INDIANA FORECASTED TEST PERIOD PROPOSED IN THIS CASE?**

3    A.    Yes, I did.

4    **Q.    PLEASE BRIEFLY EXPLAIN ANY COST SAVING EFFORTS**  
5           **UNDERTAKEN TO MANAGE COSTS.**

6    A.    Duke Energy Indiana seeks to control costs on a continuing basis. This includes  
7           more focused deployment of resources, such as the methods described in the EAB  
8           program. Utilization of HRM technology will help drive efficient deployment of  
9           resources, while reducing the potential for outages to our customers. Consistently  
10          managing project scope and properly scheduling work to maximize outage  
11          opportunities all contribute to more efficient use of capital and O&M dollars.  
12          Duke Energy Indiana has maintained essentially flat O&M expenditures over the  
13          years 2018 through 2020, even though certain fees, such as those due MISO and  
14          NERC have increased.

15                           **V. VEGETATION MANAGEMENT**

16   **Q.    PLEASE EXPLAIN DUKE ENERGY INDIANA'S TRANSMISSION**  
17           **VEGETATION MANAGEMENT PLAN?**

18   A.    Duke Energy Indiana's transmission vegetation management plan is designed to  
19          eliminate vegetation on right-of-way caused outages on circuits with voltages of  
20          200 kV and above, in compliance with NERC Reliability Standard FAC-003. For  
21          circuits with lower voltages, Duke Energy Indiana seeks to minimize vegetation  
22          related outages. In all cases, Duke Energy Indiana seeks to utilize the most cost

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 effective means to control vegetation. This includes aggressively leveraging new  
2 technologies and reclaiming transmission rights-of-way to utilize a preventive  
3 approach, rather than only reactive.

4 **Q. DOES DUKE ENERGY INDIANA ANTICIPATE AN INCREASE IN**  
5 **COSTS RELATED TO ITS TRANSMISSION VEGETATION**  
6 **MANAGEMENT PLAN? IF YES, PLEASE EXPLAIN.**

7 A. Yes. Duke Energy Indiana anticipates unit costs related to transmission  
8 vegetation management will continue to increase. The O&M for transmission  
9 vegetation management in 2018 was \$5.62 million, the projected 2019 O&M is  
10 \$7.65 million, and the projected 2020 O&M is \$7.61 million. The 2018 capital  
11 spend was \$4.3 million and of that \$1.7 million was for the emerald ash borer  
12 program (“EAB Program”). The 2019 capital budget spend is \$11.6 million of  
13 which \$7.1 million is designated for the EAB Program. The 2020 capital budget  
14 spend is \$13.3 million of which \$6.7 million is designated for the EAB Program.  
15 These costs are included in the capital and O&M expenditures described above.

16 **Q. HAS DUKE ENERGY INDIANA’S TRANSMISSION SYSTEM BEEN**  
17 **IMPACTED BY THE EMERALD ASH BORER? IF YES, PLEASE**  
18 **EXPLAIN.**

19 A. Yes. The emerald ash borer is a beetle native to north-eastern Asia that feeds on  
20 ash species. It has killed millions of ash trees in North America and is present in  
21 all 92 Indiana counties. It is estimated that there are approximately 18,000 dead,  
22 dying and living ash tree within striking distance of Duke Energy Indiana’s 69 kV

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 and 138 kV transmission lines.

2 **Q. IS THIS UNIQUE TO DUKE ENERGY INDIANA?**

3 A. No. Many areas of the midwest and approximately 50% of North America are  
4 experiencing widespread tree mortality due to the emerald ash borer. Please see  
5 Petitioner's Exhibit 25-A (TAA) for a visual of the ash tree devastation.

6 **Q. WHAT HAS DUKE ENERGY INDIANA DONE TO ADDRESS EMERALD  
7 ASH BORER ISSUES?**

8 A. Duke Energy Indiana has developed and implemented a plan to address ash trees  
9 that pose a risk to our transmission system. With the use of hyperspectral  
10 imaging technology, we are identifying ash trees that pose a risk to our facilities  
11 and implementing a systematic plan to cut these trees.

12 **Q. PLEASE DESCRIBE DUKE ENERGY INDIANA'S EMERALD ASH  
13 BORER PROGRAM.**

14 A. The Indiana EAB Program was created in 2018 with a focus on ash trees along  
15 the 69 kV and 138 kV power lines. This program is an addition to the Company's  
16 other vegetation management programs, such as maintenance, reactive, herbicide,  
17 and mowing. Hazard tree threats, which include ash tree threats, along high  
18 voltage lines are addressed through the routine maintenance program. The low-  
19 voltage transmission circuits are first aerial surveyed with fixed wing Light  
20 Detection and Ranging ("LiDAR") technology to capture the proximity of the tree  
21 threat to the power lines. LiDAR identifies the height, striking distance, tree  
22 segments, and proximity of the vegetation to the line. A second flight collects

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 hyperspectral imagery that allows for identification of different tree species and  
2 tree health based on spectral signatures.

3 **Q. PLEASE EXPLAIN BRIEFLY LIDAR AND HYPERSPECTRAL**  
4 **IMAGERY.**

5 A. LiDAR is a surveying technology that measures distance to a target by  
6 illuminating the target with laser light pulses. The sensor records the return time  
7 and location of the laser pulses to create a three-dimensional (“3D”) data  
8 representation of vegetation along the power lines. Hyperspectral imagery  
9 measures the reflectance of each pixel in five nanometer bandwidths across the  
10 electromagnetic spectrum. This results in over 100 bands of light in each pixel; in  
11 comparison to a standard photograph that detects three bands of light. Think of  
12 this as drawing a picture with a box of three crayons and then drawing the same  
13 picture with a box of 100 crayons (hyperspectral imagery). This allows for the  
14 identification of different tree species based on spectral signatures, which show  
15 reflectance at each of the 100+ bands. Each species has a unique spectral  
16 signature. An example of LiDAR and hyperspectral imagery can be seen in  
17 Petitioner’s Exhibit 25-B (TAA).

18 **Q. IS DUKE ENERGY INDIANA’S USE OF LIDAR AND HYPERSPECTRAL**  
19 **TECHNOLOGY LIMITED TO THE EMERALD ASH BORER**  
20 **PROGRAM? PLEASE EXPLAIN.**

21 A. Both LiDAR and hyperspectral technology is being used for the Emerald Ash  
22 Borer Program. The hyperspectral technology is limited to the Emerald Ash

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 Borer Program. LiDAR technology is also being used on the transmission  
2 vegetation maintenance and reactive programs. For example, in 2019, Duke  
3 Energy Indiana will be flying to collect LiDAR data on our NERC circuits for  
4 their maintenance and reactive programs.

5 **Q. WHAT IS DUKE ENERGY INDIANA'S GOAL FOR THE EMERALD**  
6 **ASH BORER PROGRAM?**

7 A. The goal of the EAB Program is to safely reduce dying ash tree impacts to power  
8 quality and long-term outages with minimum impact to customers and/or property  
9 owners.

10 **Q. WILL THIS PROGRAM IMPACT DUKE ENERGY INDIANA**  
11 **CUSTOMERS AND WHAT HAVE YOU DONE TO MINIMIZE THE**  
12 **IMPACT?**

13 A. Many property owners/customers are welcoming the program, because it helps  
14 them address their dying ash trees problem. Because we are focusing on trees that  
15 are outside of Duke Energy Indiana's right-of-way, customer consent is a  
16 necessary step for this particular program. As part of the EAB Program  
17 development, Duke Energy Indiana reviewed and created internal and external  
18 communications used to educate and inform stakeholders. Petitioner's Exhibit  
19 25-C (TAA) is the Emerald Ash Borer (EAB) Program brochure the Company  
20 used to educate external stakeholders. In addition, the Company works closely  
21 with other Duke Energy Indiana vegetation management programs to minimize  
22 the impact to customers while assisting with their problem ash trees.

**VI. TDSIC PROGRAM**

**Q. PLEASE DESCRIBE DUKE ENERGY INDIANA’S TRANSMISSION  
TDSIC PLAN.**

A. Duke Energy Indiana’s TDSIC Plan is the result of enabling legislation passed by the Indiana Legislature, and codified at Indiana Code Ch. 8-1-39. From a transmission system standpoint, Duke Energy Indiana has invested in a variety of asset-based reliability improvements, including line rebuilds, pole replacements, breaker replacements, and certain substation reconfigurations. These investments will improve the reliability and operability of the system for years to come. Although customers benefit from all reliability improvements being pursued via the TDSIC Plan, some of the more noticeable benefits will be related to pole replacements and reconductoring of the 69 kV system, as well as the reconfiguration of certain substations to contain a “ring bus” configuration, which allows for more easily maintaining multiple energy sources into that substation.

It is important to recognize that some TDSIC Plan improvements require outages to the transmission system in order to perform the identified work. While this is normal, the scale of work being done under the TDSIC Plan is large. This means that during the period where we are executing our TDSIC Plan, an historically large number of system maintenance outages are being undertaken. This increases the risk of outages to our customers, and in some cases extends the length of the outage, due to abnormal system configurations while certain portions of the system are out-of-service for construction. We work diligently to mitigate

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 these risks, but they do exist. The benefits, although significant, may not produce  
2 a step change in reliability statistics on a system-wide level, but may do so on a  
3 local level.

4 **Q. WHAT TRANSMISSION LINE AND T&D SUBSTATION PROJECTS**  
5 **ARE INCLUDED IN THE TDSIC PLAN?**

6 A. Duke Energy Indiana identified, scoped and estimated a total of 615 potential  
7 projects at 357 T&D substations and 87 Transmission Lines. From these, we  
8 have selected 323 projects at 280 T&D Substations and 144 projects on 81  
9 Transmission Lines for inclusion in the T&D Plan.

10 Additionally, Duke Energy Indiana jointly owns its transmission system  
11 with Indiana Municipal Power Agency (“IMPA”) and Wabash Valley Power  
12 Alliance (“WVPA”). Duke Energy Indiana manages and maintains the  
13 transmission system and plans to complete 46 projects at 42 T&D substations, and  
14 8 projects on 8 transmission lines on behalf of the Joint Transmission Owners.  
15 These projects are not included for cost recovery in the TDSIC Plan, but remain  
16 an important component of continued reliability of the joint transmission system.  
17 The remaining 36 projects at 35 T&D Substation and 58 projects on 26  
18 Transmission Lines were not included in the initial cut of the 7-year T&D Plan.  
19 Rather, we have identified these projects as “Alternate” projects, which are  
20 available to substitute into the TDSIC Plan at a later date if system conditions  
21 were to elevate these projects’ priority to be higher than other work that is  
22 currently included in the plan, or if actual project costs are lower than originally

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1 estimated and would therefore allow additional work to be performed within the  
2 same approved total plan cost.

3 **VII. RELIABILITY**

4 **Q. PLEASE GENERALLY DESCRIBE YOUR UNDERSTANDING OF THE**  
5 **RELIABILITY OF DUKE ENERGY INDIANA'S TRANSMISSION**  
6 **SYSTEM IN SERVING ITS RETAIL ELECTRIC CUSTOMERS.**

7 A. Duke Energy Indiana's transmission system is reliable. The highest voltages (138  
8 kV and above) would be best described as very reliable. The 69 kV system has  
9 more challenges from a reliability standpoint, and we are addressing those  
10 challenges via the TDSIC Plan reliability work and the EAB Program, which is  
11 described in this testimony.

12 **Q. WHAT ARE THE PRIMARY CAUSES OF TRANSMISSION OUTAGES**  
13 **IN DUKE ENERGY INDIANA'S SERVICE TERRITORY?**

14 A. Over the last four years, the three major causes of outages have been vegetation  
15 related outages, equipment failure, and planned outages to perform system  
16 upgrades. For example, in 2018, 10.10% of all transmission outages were related  
17 to vegetation and 42.76% to equipment failure.

DUKE ENERGY INDIANA 2019 BASE RATE CASE  
 DIRECT TESTIMONY OF TIMOTHY A. ABBOTT

1

**Table 4:**

Outage Cause	% of Total Number of Outages Excluding Planned Outages & MEDs			
	2015	2016	2017	2018
<b>Vegetation</b>	13.03%	11.50%	12.19%	10.10%
<b>Wildlife</b>	4.89%	2.88%	3.75%	4.38%
<b>Public Accident/Damage</b>	10.75%	10.54%	7.19%	18.18%
<b>Unknown Cause</b>	20.52%	17.89%	20.63%	15.49%
<b>Equipment Failure</b>	43.97%	43.45%	30.31%	42.76%
<b>Other Cause</b>	0.00%	9.90%	21.25%	5.39%
<b>Weather</b>	6.84%	3.83%	4.69%	3.70%

2 **Q. WHAT IS DUKE ENERGY INDIANA’S MAIN GOAL FOR ITS**  
 3 **TRANSMISSION SYSTEM?**

4 A. The main goal of Duke Energy Indiana’s transmission system is to provide safe,  
 5 reliable, and affordable power to satisfy our customers’ needs.

6 **VIII. CONCLUSION**

7 **Q. WERE PETITIONER’S EXHIBITS 25-A (TAA) THROUGH 25-C (TAA)**  
 8 **PREPARED BY YOU OR AT YOUR DIRECTION?**

9 A. Yes, they were.

10 **Q. DOES THIS CONCLUDE YOUR PREFILED DIRECT TESTIMONY?**

11 A. Yes, it does.

Agriculture

# Cooperative Emerald Ash Borer Project

Initial county EAB detections in North America

June 3, 2019

## Identifying Ash Trees Through Remote Sensing

### Remote sensing technology

- LiDAR capabilities for vegetation management
  - Identify: height, striking distance, tree segments, proximity of the vegetation to the line
- Hyperspectral Imagery capabilities for vegetation management
  - Identify: tree species, relative tree health

Combined, these layers of information can tell us the threat of an ash or dead tree to nearby utility assets

## How Duke Energy Is Responding

### How does Duke Energy's Emerald Ash Borer Program work?

The Emerald Ash Borer Program is in addition to Duke Energy's routine Vegetation Management Program in the Midwest, which involves cutting, removing and/or preventing vegetative growth from interfering with electric lines to provide safe and reliable operation of the Duke Energy power system for our customers.

Duke Energy representatives will visit specific neighborhoods to talk with affected landowners and/or residents who may have one or more ash trees on their property that could disrupt the power system.

Our employees and contractors will carry identification and will attempt an in-person visit to schedule a time to cut the ash and/or hazard tree(s) that could disrupt the power system.

### How do you determine which trees to cut down?

Once we identify an ash tree, we then assess its health and risk of disrupting the power system. After careful review, a tree is either identified for action or left untouched on the property.

### Can the trees be treated instead of cut down?

Duke Energy recommends that infested trees along power lines be cut down. Once the emerald ash borer infests a tree, it is only a matter of time before the tree begins to show signs of decline. As a part of this program, Duke Energy is willing to cut down ash trees at its expense if the trees could potentially impact

Duke Energy's system. However, a customer may desire to treat the trees on his/her property and not have Duke Energy cut them down. This is acceptable in areas where the trees do not have a potential impact to Duke Energy's system. Trees outside of Duke Energy's rights of way are the sole responsibility of the property owner, and therefore customers shall be solely responsible for the cost of treating any infested trees in addition to the cost and expense for the future cutting down of such trees if the customer refuses to take advantage of this program. If you desire to treat your trees, we recommend that you contact your local extension service, certified arborist or professional nursery for recommendations.

### More Information

## Emerald Ash Borer (EAB) Program

Proactively managing ash trees  
in transmission rights of way

BUILDING A SMARTER ENERGY FUTURE™

Dead and dying ash trees are becoming a widespread problem in the Midwest due to the emerald ash borer, a little green pest that has invaded ash trees. These dead and dying trees pose a serious danger to people, property and power lines because they are structurally unstable and may fall at any time.

Providing safe, secure and reliable energy to all our customers is at the heart of what we do at Duke Energy. Trees that grow too close or are in danger of falling onto power lines must be pruned or cut down to help prevent outages or service interruptions. To help provide reliable power to all our customers, we have implemented the Emerald Ash Borer Program in our Midwest service territory, a proactive approach to reducing the risk of trees falling onto power lines and our facilities.

Our methods are based on widely accepted standards established by the American National Standards Institute for tree care maintenance and operations.

### What is an emerald ash borer?

The emerald ash borer is a beetle native to Asia that was first detected in Michigan in 2002. Researchers think it arrived several

years earlier, most likely in wooden packing materials aboard a ship. Since then, the beetle has been detected in several other states. The emerald ash borer is able to kill ash trees, regardless of their health, age or size and has already killed hundreds of millions of ash trees already in the U.S.

### What does an emerald ash borer look like?

Adult beetles are metallic green and about one-half inch long. When adults flare their wings, you can see their violet abdomen. Larvae are cream-colored and are approximately 1 inch long.

### How do emerald ash borers kill ash trees?

Like many insects, the emerald ash borer has four life stages: adult, egg, larva and pupa. Adult beetles lay eggs on the bark of ash trees. Larvae emerging from the eggs bore into the bark and feed on the tree's trunk that lies just below. This cuts off the flow of water and nutrients and eventually kills the tree. The larvae emerge as metallic green beetles between April and June.

### How can I identify an ash tree?

Ash trees can be recognized by their

branches that grow directly across from one another, by the presence of five to nine leaflets, which are arranged opposite of one another on the branches and its diamond patterned bark.

### Emerald Ash Borer Quick Facts

- Trees weakened by this beetle can fall and hit power lines, resulting in power outages.
- In the United States, only ash trees are at risk for infestation.
- Signs of infestation include:
  - Dead tree branches near the top of a tree
  - Bark splitting
  - Zigzag tunnels under the bark
  - D-shaped exit holes
  - Extensive woodpecker activity
  - Leafy shoots sprouting from the trunk

**VERIFICATION**

I hereby verify under the penalties of perjury that the foregoing representations are true to the best of my knowledge, information and belief.
