Public Comments
Indiana Office of Utility Consumer Counselor
115 W. Washington St., Suite 1500 South
Indianapolis, IN 46204

To Whom it May Concern;

We, the undersigned, are writing to express our deep concern regarding the pending rate request submitted by AES Indiana to the Indiana Utility Regulatory Commission. As state elected officials representing portions of Marion County, we believe it is our responsibility to voice the concerns we are receiving from our constituents.

Over the past several weeks since the rate request was submitted by AES, our offices have received an influx of calls and messages from those who are frustrated and in disbelief. AES has held the people of central Indiana captive to their surging energy bills, forcing people to choose between their medication, groceries, and childcare expenses in order to keep their lights on. As a state policy, we prioritize five pillars of electric service: reliability, resilience, stability, affordability, and environmental sustainability. The proposed rate increase does not substantively target any one of these pillars, least of all affordability. The financial burden added to ratepayers will not add more reliable, resilient, stable or environmentally sustainable service by modernizing infrastructure.

Everyday Hoosiers should not have to go into debt to pay their energy bills, nor should AES have the ability to continually increase their rates exorbitantly in order to boost their shareholder value. We urge those on the IURC to consider all comments submitted and to perform their duties in the best interest of the public as required by state statute.

As the consumer voice, we urge you to demand more and demand better from AES. We demand that ratepayers see a return on their current investment before AES asks for even more out of their pockets. Deny this unwarranted rate increase.

Thank you for your time and consideration.

In service,

Justin Moed
State Representative
House District 97

Andrea Hunley

Public Comments
Indiana Office of Utility Consumer Counselor
115 W. Washington St., Suite 1500 South
Indianapolis, IN 46204

To Whom It May Concern;

I am writing to express my deep concern regarding the pending rate request submitted by AES Indiana to the Indiana Utility Regulatory Commission (IURC). As a state elected official who represents portions of Indianapolis, it is my duty to voice the concerns of my constituents.

Since AES submitted its rate request, I have received an outpouring of calls and messages from individuals in my community who are frustrated and angry. Hoosiers' energy bills spiked by 17.5% this year, with AES bills increasing an average of nearly $17 per month. Now, the company seeks an additional estimated increase of $21 per month from its ratepayers.

I adamantly agree with Indiana's consumer advocacy organizations, which are calling these rate hikes a "crisis of affordability." AES maintains a monopoly over household electricity in Indianapolis. Consumers must swallow the rising costs since they cannot forgo this necessity. Surging energy bills have forced many to choose between keeping their lights on and other needs, like medication and groceries.

I adamantly oppose the requested rate hike that will cost hard-working Hoosiers between $21 and $30 more per month. AES should not have the ability to continually increase its rates exorbitantly to boost shareholder value. The company has the highest-approved profit margin among Indiana's investor-owned elctric utilities at 9.9%. If approved, this proposal would increase its profit margin to 10.7%, putting profits above people.

I urge the members of the IURC to consider all comments submitted and to perform their duties in the best interest of the public as required by state statute. Thank you for your time and consideration. Do not hesitate to reach out if you have any questions regarding the comments above.

In service,

Gregory W. Porter
State Representative

Chairman Jim Huston
Indiana Utility Regulatory Commission
101 West Washington St.
Indianapolis, IN 46204

September 2, 2025

Dear Chairman Huston,

I am writing today in regards to IURC case number 46258. I am deeply opposed to the rate increase proposed by AES Indiana because of the impact it will have on Hoosiers from my district and across AES' service area. On behalf of these constituents, I strongly urge the IURC to listen to the feedback of the community and reject this proposal.

This rate increase proposal comes before the IURC less than a year after the approval AES' previous rate increase. AES Indiana is the sole provider of electricity in Marion County and consumers do not have other options for this essential service. Ratepayers are struggling to keep up with already high utility rates. Another increase will put further stress on the finances of Indianapolis families who are working hard to make ends meet in a difficult economic environment.

Since the announcement of AES' rate increase petition, I have received a large number of calls and emails from constituents in opposition to their proposal. The IURC must take this feedback from the community into consideration. I am grateful to the OUCC for holding field hearings across Marion County to allow everyday citizens to make their voices heard. At the field hearings, those voices spoke loudly and clearly: The approval of Case Number 46258 would be harmful to our citizens and community.

I stand with the many worried constituents who called, wrote letters, and testified at the field hearings. It is my job to advocate for those in my district and support policies that benefit them. The proposed rate increase from AES does not benefit my district or Indianapolis; only an investor-owned utility company that already has the highest profit margin of all investor-owned utility providers in Indiana.

I ask that you to keep my constituents and all Hoosier ratepayers in mind when considering this rate increase, and I urge you to reject this proposal. I appreciate your consideration of this letter, and I am happy to answer any questions you may have.

Sincerely,

La Keisha Jackson, MBA
Indiana State Senate

RE: AES Indiana Rate Case (IURC Cause No. 46258)

AARP Indiana on behalf of its members and the older Hoosiers in Central Indiana who are AES residential customers submits the following comments on the utility's rate case filing.

COMMENTS OF AARP INDIANA

Many of the Hoosiers most impacted by this request are on low or set incomes, which makes rising electricity bills a challenge when combined with higher grocery, housing and medical costs.

Under AES's proposed phase one rate adjustment, average residential customers consuming 1,000 kWh per month would see a monthly bill increase of approximately $21, or 14.3%. Phase two would add a further $9.24 per month, representing an additional 5.5% increase. Taken together, these increases appear excessive. We respectfully urge the Commission to prioritize the impact on residential customers in its evaluation of AES's request.

Our other specific comments are as follows:

The proposed $957.3 million 2026 projected capital additions must be scrutinized.
A rigorous assessment of AES's proposed $957.3 million in capital additions for the 2026 test year is necessary to confirm their prudence, cost-effectiveness, and customer value. Likewise, the projected $952.9 million in 2025 bridge period investments should be reviewed to ensure each is justified and beneficial to customers.

The customer charges should not be increased.
AES has proposed to increase the monthly residential fixed customer charge for smaller residential customers (using <325 kWh/month) from its current level of $12.50 per month to $15.00, or an approximate 20% increase. Similarly, AES has proposed to increase the monthly residential fixed customer charge for larger residential customers (using >325 kWh/month) from its current level of $17.00 per month to $20.00, or an approximate 17.6% increase. These increases in monthly fixed charges for customers make controlling their energy bill more difficult.

The requested 10.7% return is excessive.
The requested 10.7% requested return on equity is excessive and out of line with what Commissions are authorizing in other states. The national average is 9.6%.

Residential rates should not be increased more than the system average.

AES proposes to increase residential revenues more than the system average increase. This is unfair. Residential customers cannot afford and should not pay more than the system average.

The proposed property tax rider should be rejected.
AARP opposes single issue riders and surcharges like the proposed property tax rider. Such riders ignore offsetting cost decreases. Such costs should be recovered in base rates.

The IURC should order AES to tell MISO to reduce its spending. It should also support the FERC complaint filed by 5 other states.
AARP supports the Section 206 FERC complaint filed by five MISO state commissions urging rejection of MISO's proposed $33 billion transmission plan, which its own market monitor deemed uneconomic. This spending is estimated to cost Midwest households approximately $2,600 each. Indiana ratepayers would bear 15% of the plan's cost despite much of the investment benefiting other states including those with costly mandates that Indiana does not have. MISO should follow its independent market monitor's recommendations, including eliminating inflated benefit assumptions and not approving uneconomic long-distance transmission lines.

We appreciate this opportunity to comment.

Strong Concern Regarding Proposed 19% Electric Rate Increase | Cause No. 46258

To Whom It May Concern,

I am writing on behalf of BMO Plaza, located at 135 N Pennsylvania Street, a high-rise commercial property located in downtown Indianapolis and is a longstanding customer of AES Indiana. We are writing to express our strong opposition to the proposed 19% rate increase currently under review.

This proposed increase poses the possibility of a significant financial burden for many buildings in downtown Indianapolis. Our average monthly electricity cost in 2025 thus far has been approximately **$80,000**. A 19% increase would raise our monthly expense by **an additional $15,000**, amounting to a staggering and unjustifiable escalation in operating costs.

This is not just a line-item increase, it represents a major economic pressure on commercial buildings across Marion County. It directly affects our tenants, our ability to remain competitive, and our contribution to the local economy. Approving such a sharp increase without a thorough and transparent justification would be both irresponsible and harmful to the broader business community.

We strongly urge AES Indiana and relevant regulatory bodies to conduct a **more rigorous review** of this proposal. Additionally, we request a **detailed breakdown** of what is driving this rate increase and how such a decision is being evaluated in the context of current market conditions.

We expect to be engaged more proactively before changes of this magnitude are considered. Our organization—and others like ours—deserve a seat at the table when decisions with such sweeping financial consequences are proposed.

We look forward to your prompt response.

Sincerely,
BMO Plaza Property Management
Zeller Management Corporation

To whom it may concern:

I am a resident of Indianapolis (46240 Zip Code), and a customer of AES Indiana. I received notice from AES Indiana that they have requested permission for the following rate increases:

> If AES Indiana's request is approved by the IURC, a residential customer using 1,000 kWh per month will see an increase of about 13.5% - or up to $21 - in two phases:
>
> - Up to 7.5% in Q2 of 2026 and
> - Up to 6% in January 2027
>
> In addition to this requested rate review, AES Indiana customers will see a 6% bill increase in 2026 compared to bills in 2025 due to approved projects, such as the Pike County Battery Energy Storage Solution, Petersburg Energy Center and grid improvements forecasted to be complete through 2026.

I am a rational consumer, and consider myself a responsible homeowner. I am growing increasingly concerned with increases, generally speaking, given the state of affairs in our economy. I feel like any increases I have in my pay at work are directly sucked into increased fees from vendors like AES. A $21/month increase may not seem like a lot of money, but combined with other increased expenses - namely healthcare, groceries, education, daycare, and the like - it all adds up and frankly is more than the modest increases in pay at work. If my family, which I consider a comfortable middle class family, is going to feel this pinch, I can only imagine how such an increase would be taken by my fellow Indy neighbors who aren't as comfortable with their economic situation.

This is my first time writing to the commission, and I hope that I am doing things the proper way. Please consider my comments as you weigh the decision to approve these rate increases for the sake of my family and the thousands of families in Central Indiana that would be impacted by the weight of these rate increases.

Sincerely yours,
Jayme Little (& Joel Wendland)

Indiana Office of Utility Consumer Counselor
115 W. Washington St., Suite 1500 SOUTH
Indianapolis, IN 46204

Indiana Utility Regulatory Commission,

I am writing as an existing AES customer with concerns regarding how AES is using their currently available funds from customers. Particularly in concerning their additional ask for funds due to tree trimming costs.

Over a period of one year, AES sent three separate tree crews to my neighborhood to trim the same trees on the same line. The evidence of these visits are attached. The first crew came in August of 2024. I did not keep the tree trimming notice tag for the first visit, because I felt it was normal. Attached is a screenshot of a photo I took at the time, I also have a text conversation with my neighbor for this visit, as a tree cited is on our shared property line. The text conversation is not attached, but can be provided if necessary. The trees were trimmed, brush stacked by the street, and then collected. The work was completed for the marked trees.

Next, we received a letter regarding the tree trimming in October of 2024 (attached). Which I thought was odd as the previous work had already been completed. I then received the second set of tree tags (attached dated November 11, 2024). These tags cited the same two trees from the first crew that came through, plus two more. Again, the crews came out, trimmed, stacked the trimmings by the street, collected the trimmings, and the work was again done.

The third crew came through in April of 2025, see attached tree tags. This time they had a mini-bucket. I had an in-person conversation with 2 members of this tree crew due to the concerns I had with the extreme trimming that had been done to the trees on the previous two visits, and the health of my trees. The third crew then came out, trimmed, stacked the trimmings by the street, collected the trimmings, and the work was again done again.

Why does it take three crews to trim the same trees on the same lines in less than one years time? It does not appear that AES is being good stewards of the funds they already have, and should look into lean processes rather than just asking for more money.

I would also ask if these additional funds for 'improvements' are for current, in-place customers and utilities; or are the improvement funds to support new data centers, stadiums, billion-dollar hospitals, etc. If the 'improvement' fund request is to support such customers, then that burden should be placed on the companies necessitating those expansions, and not residential customers.

Sincerely,

Katie Hull
Indianapolis, IN 46220

TREE TRIMMING NOTICE

If there are no overhead power lines adjoining your property, you may disregard this notice.

Dear Customer,

This is a notice to inform you of upcoming vegetation management near overhead electrical facilities. Trees growing too close to electric power lines may pose a serious threat to public safety. Furthermore, trees making contact with electric power lines are responsible for a significant percentage of electrical outages and other power quality issues. Therefore, to provide you with safe and reliable electric service, AES Indiana vegetation management practices will consist of the periodic removal of tree branches and, in some instances, whole tree or brush removal near electric equipment. Some situations may also warrant removal of branches above the wire to provide a minimal clearance of 15 feet.

In the next few weeks, our contractor, Eocene, will be notifying you about the upcoming tree pruning that will be taking place in your neighborhood. When these representatives come to your door to answer questions and deliver door hangers, they will all have a picture I.D. that identifies them as an AES Indiana contractor. For more information about Eocene, go to https://eocene.com/. Within a few weeks after you are notified by Eocene of the upcoming line clearing, our Tree Contractor will be pruning trees in your neighborhood. All AES Indiana-Tree Contractor employees will have a picture I.D. that identifies them as an AES Indiana contractor.

Receipt of this notification begins the process for implied consent. After 2 weeks, if the occupant does not deny consent, trimming will occur. If you do not want any line clearance work to be done on your property at this time, please contact the AES Indiana Line Clearing Office to discuss options and or to schedule a meeting with an AES Indiana Arborist.

Any debris associated with scheduled vegetation management will be chipped and hauled away within 48 hours after work is complete. If you want to keep the mulch or wood, please contact us and we will be more than happy to make arrangements with you.

It is not necessary to call to schedule tree pruning. However, if you have additional questions or special circumstances such as a dog in the yard or a locked gate, please contact the AES Indiana Line Clearing Office at (317) 261-8128, between the hours of 7:00 a.m. and 4:00 p.m., Monday through Friday.

If you are a non-property owner living or working at this property, we strongly encourage you to notify the property owner as soon as possible that vegetation management is scheduled to occur.

For information regarding AES Indiana's Line Clearing Program and to learn more about AES Indiana's commitment to the urban forest go to http://www.AESIndiana.com. Furthermore, information can be found on the Indiana Utility Regulatory Commission (IURC) website https://www.in.gov/iurc and the specific Tree Trimming Rule can be found at https://www.in.gov/iurc/files/RM10-04_08292012.pdf

Thank you for your patience and understanding as AES Indiana works to improve power quality and reliability in your area.

Sincerely,

AES Indiana

Subject: Dan Mullendore - Comments on AES Rate Case 46258
Date: Sunday, August 17, 2025 6:49:20 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear OUCC,
I have been retired from IPL (AES Indiana) for 7+ years now, but as an employee of 12 years, the rumor was that AES Indiana sent so much in profits to corporate headquarters, AES Indiana, was known the AES "cash cow". Before AES acquired DPL (AES Ohio), the public financial reports used to break down very explicitly how much money flowed out of Indiana to corporate headquarters. Back then, almost $1,000,000 a day went to AES Headquarters as profit..

I also suspect that the recent botched customer computer system upgrade, which AES Indiana outsourced to another AES division in Brazil to the tune of $40,000,000, was another clever way to transfer money out of AES Indiana to another AES division as an "expense". In addition I think AES Indiana was charged the full purchase and development price of the system that, now that it has been debugged, is going to be used by other AES divisions. When I worked in the AES Indiana IT department, the estimate to replace this old mainframe based CRM system was only $10 million and it kept getting postponed
because that dollar amount was "too expensive".

As an AES rate payer, I am strongly opposed to granting AES Indiana another rate increase. There is no way to justify even higher profit margins on top what are already the highest of any investor owned utility in Indiana and Indiana citizens shouldn't continue to pay to feed the AES "cash cow".

Thanks.

Subject: ROBIN RYAN - AES INDIANA Rate increase
Date: Wednesday, August 27, 2025 8:30:43 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To whom it may concern

good morning. My name is.
Robin Ryan, I was a former employee of AES Indiana as of 3 months ago I retired. I see, they're asking for another rate increase. Which, in my opinion, they do not deserve. The reason is that new system that they implemented back in November of 23 is still not working correctly. People still do not get their bills on a regular basis if they are on auto pay. Their auto pay is not deducting. 30 days it's deducting 60 days. It should be doing it in 30 days and not 60. Peoples budgets will go up anywhere from 34 or 5 times the amount after 3 or 4 months. Have they been on the budget if? AES is telling you that these errors have been corrected that is not true. They cannot correct these problems until they have part 2 of the sap system in part 3 of the sap system and they cannot afford to buy either one of those parts. Are they wanting us customers to pay for those? Because I don't feel like we should have to pay for something that they messed up on that. They did not research or did their homework on because if they had they would have known the system would not work for AES and would not do what we needed to do I was employed with them for 10 years. I know back in 18 or 17. We switched over to sales force. We only worked on it for 10 months and then we went back to our regular system, which was hats. Hats was working.
Just fine, it might have been old system or an old program but it was working and people were getting their bills like they should not get this rate increase. I feel that they have not done anything in the past. To make things better and the onl. Y reason I say that is because I work there and I didn't see where they did. Anything better we still have outages like we do I had one the other night and no rain. No win. D why did I have an outage? They're just wanting us customers to pay for that.Part 2 and part 3 for the sap system that they need.It's so d*** expensive as they can afford it.Lay off some of your high-paid employees.That should have retired 15 years ago and still working there.You force other people out of there.Why don't you force them out of there. In addition to this brandy devis, I would not believe anything she says about AE. S she does not work on the system and she doesn't know that if it works or doesn't ask the reps that have to work on the system every day, I hope that you take this inconsideration and I hope and pray that you don't give them their rate increase they. Don't need it and they have not deserved it, especially when they even have switch meter on customers. And then they tell me to tell the customer to tell that customer to continue to pay somebody else's bill. And then they want a rate increase. They're not even doing. Their job to see to it that things are corrected. They have so many people working there and not enough people to do the job. Wow, makes a lot of sense done it. You'd like to contact me Phil. Free too at 3172476412. I'll be glad to talk to you more about this. If you'd remember I worked there for 10 years and I know what's going on inside and I can tell when they're lying and when they're telling the truth and right now they're lying, especially brandy Davis, she's our biggest liar we have.

Type of Inquiry: Case Comment
Comments: Cause Number 46258 - Rate Increase
I would like to say on behalf of my community, that the practice of raising rates for all of the tax payers, renters, property owners that actually live in this city on behalf of ANY corporate entity goes against what good governance should be. The governing bodies that put forth regulations and laws, and also enforce them, works for the PEOPLE of the communities they serve. Not some corporate interest.. Contrary to corrupt supreme court rulings, corporations are not people. They don't watch their rates for ANYTHING go up. Like ever. Anytime they do see higher expenses on their end, what do they do? That's right! Pass it on to the consumer or reach out to politicians that want to stay in power to work out some shady deal to make the PEOPLE subsidize the corporate costs through higher tax rates or lessened regulations (less community safety) for the corporation to cut costs. Please make this one of the very few good stories to be told to our grandchildren that our community stood firm together, politician, citizen, neighbor, law enforcement, and governing bodies. We stood together and told a giant corporation that if you build here, you WILL pay your fair share of the costs of you being here. Taxes, infrastructure development, community outreach, and following the unspoken rule of doing what's TRULY best for the whole community you break ground in. Without we the people, you don't exist. Lets please stop this rate hike, and for one time in my life, in this time, make the corporation pay their fair share WITHOUT further breaking the backs on the dwindling middle class and the poor. No company that is currently building a data center anywhere in this country has a market cap valued at less than 10s of BILLIONS of dollars. What are we doing here?! Why is this even a discussion at all?! AES along with every other power company out there made a deal with the government long ago on their pricing structure and that it SHALL include the setting aside of funding to keep up on the infrastructure. Instead of commercials and advertising, AES should have spent that money on the infrastructure. Like, why do they even advertise?! They're a literal monopoly for this community. Should be illegal. They're the ones making crappy business decisions with their revenue and now we the people are expected to subsidize the cost of the infrastructure they need to build for a corporation's pet data center project. And don't fall for the whole, "creates jobs for the community" line! The VAST MAJORITY of any jobs a data center creates go away at the ribbon cutting ceremony. A typical data center has between 20-40 full time employees. A hyperscale data center (very large scale data center) might employ between 100-120 full time employees. And the construction jobs aren't filled from within our community. They're giant construction companies from out of state/country that are building all these data centers. Last I checked, Indiana doesn't have any giant scale companies that specialize in data center construction. Maybe the gas stations, hotels, and restaurants will see a 6-12 month bump in business, but after the construction is over and the data center is up and running, our community will at best see 100-120 more full time jobs introduced at the expense of EVERYONE paying more for their electricity. All because of the irresponsibly handling of money from our monopoly utility and from a giant corporation yet again asking for government welfare.

Re: Case No. 46258 (AES Indiana's petition to increase rates)

To Whom It May Concern,

The Indiana Utility Regulatory Commission should NOT allow AES Indiana to raise rates for residential customers. To do so while the number of Hoosiers experiencing poverty and/or nearing poverty increases is to confirm to residents and the rest of the country that Indiana leaders want to see people suffer and struggle.

This is a state where minimum wage remains at $7.25 AND has laws limiting local governments from raising minimum wages in their community, so who is supposed to afford these extra costs being shifted onto customers while Big Business / Big Data gets more tax breaks and holds little accountability to Hoosiers?

This is especially concerning because AES Indiana looks at trying to power a possible new data center that would offer little-to-nothing long-term to the community while also risking major environmental and health wreckage against neighbors. AES Indiana has no business trying to power a big data center that is far more harmful than the pitiful 10- 50 "potential" jobs it could bring when those same jobs could shorten the lifespans of Hoosiers. We're already seeing examples of how (increasingly) bad it can look in neighboring states (i.e. Oldham County, KY) , we shouldn't try to replicate something we know fares poorly for the people.

The Indiana Utility Regulatory Commission should deny AES Indiana's request to raise residential rates and should instead require any businesses that seek to come here to pay their fair share on utility costs. It is beyond unethical for AES Indiana to even think to request such a thing when they can easily see what Hoosiers are going through. It's transferring the costs and debts of Big Data onto Hoosiers who are gaining little-to-nothing from Big Data's presence, while carrying all of the risks.

Thank you,

Tylyn Johnson

Subject:	Edward Holly - URGENT: Wrongful Power Disconnection, Health Hazard Due to Heat – Immediate Action & Compensation Required
Date:	Monday, June 23, 2025 6:17:36 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear AES Indiana,

I am writing to demand immediate action regarding the wrongful disconnection of my electricity, which occurred on June 21, 2025, due to your internal error—specifically, the misassignment of meter numbers on your end. I just returned home on June 23, 2025, to discover this issue and the serious consequences it caused.

Despite having paid my bill, my service was disconnected. As a direct result of your negligence, I experienced the following:

- I was forced to sit in my car from 2:00 PM to 5:30 PM just to access air conditioning, during an active Heat Advisory, with real-feel temperatures over 100°F.
- I lost approximately $200 worth of perishable and frozen food, which had spoiled due to the power being off since June 21.
- I endured physical discomfort, emotional distress, and unnecessary expense, including the use of gas to stay cool.
- I was exposed to a hazardous environment, with no ventilation or relief available inside my home.

This occurred during extreme heat conditions in Marion County. Your mistake placed me in a situation with genuine health risks, especially considering the overnight heat retention with no cooling period.

—

I am demanding the following:

1. Immediate reconnection of my electric service and confirmation in writing.
2. Full reimbursement of $200 for spoiled food.
3. Compensation for gas expenses incurred while using my vehicle to stay safe, including a $20 gas card to cover additional fuel and inconvenience.
4. A formal written apology acknowledging AES's error and the hardship caused.
5. Documentation proving that my meter is now correctly matched to my account, with a guarantee this will never happen again.

If I do not receive a full resolution within 24 hours, I will escalate this matter to:

- The Indiana Utility Regulatory Commission
- Local media outlets
- Legal counsel, to pursue a formal damages claim

Your negligence created a dangerous, avoidable emergency. I expect this to be taken seriously.

Sincerely,
Edward holly

Comments: Subject: Oppose AES Indiana Rate Hike – Unjust Burden on Consumers

Dear Members of the Indiana Utility Regulatory Commission,

I am writing as a concerned resident and customer to express my strong opposition to AES Indiana's proposed rate increase.

At a time when many Hoosiers are struggling with rising costs of living, it is unacceptable to ask consumers to pay more for essential utilities—especially when AES's CEO receives over $14 million in annual compensation. This glaring disparity calls into question the company's financial priorities and whether it is acting in the public's best interest.

Public utilities have a responsibility to serve, not exploit. Before approving any rate hikes, I urge the Commission to demand transparency and accountability from AES, including a thorough review of executive compensation and corporate expenditures. Any financial shortfalls should be addressed through internal reforms—not by increasing costs for hardworking Indiana families.

I respectfully request that the IURC deny this rate increase and stand with consumers who deserve affordable and fair access to basic services.

Thank you for your consideration.

Sincerely,
Jared Jackson

Utilities: AES
Type of Inquiry: General Inquiry
Comments: Good afternoon,

My name is Jessica Murphy, and I am resident of Marion County and a customer of AES. I am writing to share that I am DEEPLY opposed to the proposed rate increases from AES, and to urge to you not vote in favor of their request.

When combined with recently approved rate increase of 6%, this newest request to increase rates by 13.5% is AES increasing rates by almost 20%! This is so deeply inappropriate. This significantly increases the costs for consumers while not providing efficient or effective services, and increases rates at exponential levels from changes to the cost of living.

Every line technician or customer service agent I have interacted with has been kind and hard-working, however the quality of service from AES has been poor. I was one of the many folks caught in the absolute clown show of transferring to the new billing system - I had multiple bills per month, all for different prices, and had been on budget billing (the costs averaged over the year) and auto-pay. A customer service agent recommended canceling auto-pay and paying only the budget-billing amount, and directed me to ignore any other bills (none of which was able to be documented officially). My neighborhood has power outages at what seems to be an almost weekly basis. The quality of service is not at a level that would indicate the business owners are good stewards of the revenue they already generate.

At a time when inflation is rising, rents are through the roof, and many people are losing their jobs due cuts to the federal workforce or grant cancelation, raising rates is poor leadership. ASKING for rate increases is tone-deaf and (with the cuts to emergency energy assistance programs) cruel. Please do not approve AES's request to continue to pay their leaders tens of millions of dollars while every-day folks suffer under increased rates and decreased services. We are seeing this happen at the federal level, but the people of Indianapolis deserve better. The millionaires will be fine without this increase, whereas working-class Hoosiers will suffer at this egregious rate hike.

Sincerely,
Jessica Murphy

BEFORE THE INDIANA UTILITY REGULATORY COMMISSION

IURC Cause No. 46258

PETITION OF INDIANAPOLIS POWER & LIGHT COMPANY D/B/A AES INDIANA FOR AUTHORITY TO INCREASE RATES AND CHARGES

PUBLIC COMMENT IN OPPOSITION AND REQUEST FOR COMMISSION SCRUTINY

To the Indiana Office of Utility Consumer Counselor, IURC Commissioners, and Elected Representatives:

Please accept this formal public comment from an AES Indiana customer in Indianapolis. I strongly oppose this request and urge the Commission to subject it to the most rigorous possible scrutiny to protect ratepayer interests and ensure any approved rates are truly just and reasonable.

Introduction

AES Indiana seeks to raise its annual revenues by approximately $192.9 million, following a $71 million base rate increase approved in April 2024, along with ongoing recovery through its Distribution Investment Rider (DIR). The Company's Petition, filed June 3, 2025, justifies this request based on a speculative forward-looking test year and billions in planned capital expenditures.

As a stakeholder, I urge the Commission to critically evaluate the prudence, necessity, and fairness of this duplicative and premature request.

Background and Context

Contradictions Between Petition and AES' Own Financials

- Earnings Strength: AES reported net income of $441 million in Q2 2025, up from $331 million in Q1【Q2 2025 10-Q, p. 5】. Adjusted EBITDA grew to $681 million, up from $658 million in Q2 2024【Transcript, p. 3】. Adjusted EPS rose to $0.51, up from $0.38【Transcript, p. 9】. AES reaffirmed full-year guidance of $2.65–$2.85 billion Adjusted EBITDA and $2.10–$2.26 Adjusted EPS, describing itself as "in a uniquely strong position"【Transcript, p. 1–2】.
- Cash Flow: Q2 2025 operating cash flow reached $976 million, more than double the prior year's $392 million【Q2 2025 10-Q, p. 34】. Over the past 12 months, AES disclosed $1.78 billion in distributions from subsidiaries to the parent company, including from Indiana【Q2 2025 10-Q, p. 35】.
- Dividends Maintained: AES confirmed continuation of its quarterly shareholder dividend of $0.17595 per share【Q2 2025 10-Q, p. 36】. If Indiana rates were truly "confiscatory" as claimed (Petition ¶24), maintaining shareholder payouts would not be defensible.
- Aggressive Expansion: AES highlighted the largest investment program in AES Indiana's history, including the Pike County battery project (200 MW/800 MWh), the Petersburg Energy Center (250 MW solar + 180 MWh storage), and coal-to-gas repowering at Petersburg by 2026【Transcript, p. 7】. Simultaneously, AES signed 1.6 GW of new PPAs this quarter alone, 100% with data centers such as Meta【Transcript, p. 2–3】.

Taken together, AES' SEC filings and earnings call disclosures confirm financial health and aggressive expansion — directly at odds with its claim that current Indiana rates are "unjust" or "confiscatory."

Concerns and Grounds for Commission Scrutiny

1. *Potential Double Recovery and Unproven Future Costs*

AES must reconcile this request with revenues already recovered through the 2024 Base Rate Order and the ongoing DIR rider. Its reliance on a forward-looking test year (ending Dec. 31, 2026) risks charging ratepayers for speculative costs — projected at $957.3 million in 2026 alone【Petition, ¶30】 — without enforceable guarantees of benefits.

2. *Lack of Demonstrated Customer Benefit*

While AES testifies (Petition ¶39) to supporting its "Five Pillars," it has not demonstrated measurable improvements in SAIDI/SAIFI reliability indices or customer service from the hundreds of millions already collected. Its vegetation management program has exceeded budget, yet no proportional reliability improvements have been documented. Ratepayers are being asked to pay more without verified value.

3. *Significant Affordability Concerns*

A nearly 10% cumulative increase — raising an average 1,000 kWh bill to $177.60/month【Petition, ¶¶45–47】 — presents a severe burden on low-income families, seniors, and small businesses. The proposal to increase the fixed monthly charge (Witness Rimal) disproportionately harms low-use and low-income customers, undermining AES' own stated "Affordability" pillar.

4. *Question of Necessity and Profitability*

AES is seeking a 10.7% Return on Equity (ROE) — the high end of U.S. regulated utility benchmarks — while reporting strong net income, $976 million quarterly cash flow, and nearly $2 billion distributed upstream【Q2 2025 10-Q, p. 35】. The Commission must question whether this request serves Indiana customers or AES' global shareholder strategy.

Requested Information and Disclosures

To ensure transparency, I respectfully request the Commission require AES to:

- Provide a detailed reconciliation proving no overlap with the 2024 Base Rate Order or DIR rider revenues.

- Conduct a prudence review of the Petersburg Repowering Project and other large capital expenditures cited in the Petition.
- Publish a customer-class bill impact study showing combined effects of volumetric and fixed charge increases on low-income, fixed-income, and small business customers.
- Disclose all federal/state grants and financing sources considered before shifting costs to ratepayers.
- Establish a binding reliability performance plan with SAIDI/SAIFI/CAIDI targets and financial penalties for missed metrics, particularly for vegetation management.
- Reject the proposed Property Tax Adjustment Rider (PTA), which would bypass Commission review and erode ratepayer protections.
- Require an enhanced low-income assistance program to mitigate hardship from any approved increase.

Conclusion

AES Indiana's petition is excessive, premature, and unsupported by its own financial disclosures. The company has not met its burden to prove this request is just and reasonable.

At a minimum, the Commission must:

1. Require AES to reconcile new revenues with existing recovery mechanisms,
2. Tie any approved revenues to measurable, enforceable customer benefits, and
3. Provide robust protections for vulnerable households.

Approval of this request as filed would prioritize global shareholder returns over Indiana ratepayers, contrary to the compact of a regulated monopoly.

Respectfully submitted,

/s/ Kristy Schaler

From: Jeffrey Oaks
To: UCC Consumer Info
Subject: Jeffrey Oaks - Formal Complaint and Opposition to Proposed AES Indiana Utility Rate Increase
Date: Monday, June 23, 2025 10:47:51 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Commissioners:

I am writing to you as a concerned citizen, customer of AES Indiana (formerly Indianapolis Power & Light), and member of the Indianapolis community, to formally express my opposition to the proposed utility rate increase recently filed by AES.

This proposed increase—occurring during a time of ongoing economic hardship for many households—places an undue and unjustifiable financial burden on customers who are already struggling to meet basic living expenses. Many Hoosiers are still recovering from the economic aftermath of inflation, housing shortages, and rising healthcare costs. For AES to request a rate hike at this time reflects a disconnect from the realities facing the public they are entrusted to serve.

Lack of Justification
AES has not sufficiently demonstrated a public need for this rate increase. While AES claims the additional funds are necessary for infrastructure upgrades and operational sustainability, the details provided to consumers have been vague, lacking transparency and accountability. Customers deserve clear documentation of how these funds will be used and why existing revenues are insufficient.

Disproportionate Impact on Low-Income and Working-Class Families
Raising electric rates during the summer—when usage naturally spikes—will disproportionately harm low- and moderate-income residents, many of whom are already facing increased eviction rates and high energy burdens. It risks exacerbating energy insecurity and pushing vulnerable families further into crisis.

Request for Regulatory Oversight and Denial
As a public utility, AES operates under a mandate to serve the public interest. I am urging the IURC to:

Reject the current proposed rate increase until a full, independent audit can be conducted into AES's budgetary practices and claimed justifications.

Mandate greater transparency from AES on how customer funds are allocated and how rate increases will impact diverse communities across the state.

Require AES to present alternative funding proposals that do not rely on additional financial burdens to customers, such as cost reductions in executive compensation or redirecting non-essential capital expenditures.

The role of the IURC is to act as a safeguard against exploitative practices. I trust you will uphold your responsibility and carefully scrutinize this rate case to protect the interests of

Indiana residents.

Thank you for your time and for considering the needs of consumers.

Respectfully,
Jeffrey Oaks

Utilities: AES proposed rate hike
Type of Inquiry: Case Comment
Comments: I am writing to request that this proposed rate hike be denied.

I am writing to voice my strong opposition to the proposed utility rate hike. According to the company's own reporting, my household is already one of the most efficient in my neighborhood, yet my monthly bill is still unreasonably high. I built this home in 1986, when I had far greater electricity use than I do now, and yet today my pared-down usage costs nearly three times what it did under IPL.

It is my understanding that much of this increase is being driven by funding for an "experimental" nuclear plant mainly to supply power for large data centers being built to support AI. There are numerous other energy options available that are faster, less costly to build, and present fewer environmental concerns. If the true driver of this demand is the power needs of large-scale data centers, particularly those serving artificial intelligence operations, then the corporations creating that demand should bear the cost—not Indiana's citizens. These companies will consume the most resources, including electricity and water, while the financial burden is shifted to ratepayers who see no benefit.

I do not support asking everyday Hoosiers to subsidize projects that are neither guaranteed to be efficient nor environmentally responsible. If the utility needs funding, it should come from those demanding increased capacity, from corporate profits, or from trimming excessive executive compensation—not from hard-working residents. For example, the CEO's salary of over $13 million per year could easily offset some of these costs.

My income is fixed, like that of many in Indiana, is not increasing to meet these higher bills. In fact, it is declining under current economic pressures. This proposed rate hike disproportionately harms poor and middle-class households who are already struggling.

I urge you, as elected officials, to stand with your constituents rather than corporate lobbyists and reject this unjustified rate increase. Indiana residents deserve fair treatment and responsible energy policy—not higher bills to underwrite corporate profit or risky experiments.

Sincerely,
a life long IN resident and not happy with the way we are being treated by our governmental representatives.

To the OUCC,

I would like to share my comments from the perspective of small business owners. My partner and I own Uptown Pup on 54th Street just south of Broad Ripple, and we provide dog daycare, boarding, grooming, and training services to over 400 households. In our nine years we have faced some obstacles to opening and expanding our business. We know what it's like to ask a zoning board for permission to operate where and how we want, to have the local impacted residents express their concerns about it, and to be denied our requests and have to change the plan. We know what it's like to be told "no," even when we were offering jobs, services, and economic improvement to our community. And we understand as a business that that is how the process works, and that residents have a right to oppose certain business actions that could impact their quality of life. It is on us as a business to figure out another way of doing things if our initial plan doesn't work out. We have done this several times, and our small business has been fine - thriving, in fact. If you say "no" to AES's rate hike and profit increase, they will also be fine. More than fine, with hundreds of millions of dollars in profit. If they want to preserve or increase that profit, they should pass their costs on to the massive corporations that want to build these massive data centers. It is wild to me that AES would even think of passing those costs on to residential rate payers. It is unconscionable for them to request MORE profits on the backs of people who are bordering on homelessness.

If our business utility bills go up, we can handle it. Our AES bill at Uptown Pup is usually less than 1% of our revenue. An increase in our rate will never send us into bankruptcy. When looking at residential cost of living in Indianapolis, utilities make up more than 4% of the $50k a year estimated overall cost of living, at $212 per month. For people making minimum wage, it's closer to 20% of their gross wages. As a business, when our costs go up, we can increase our prices. We can figure out different revenue streams and ways to streamline operations in order to stay profitable. If rising costs take our profit from 10% to 5% - that's still a profit - our basic needs are covered and our bills are paid with more to spare. There are thousands of people in Indianapolis who don't know what that feels like. Yet AES wants to raise rates on residential over commercial? When the residential costs go

up, it’s a different story. The people who are already struggling to pay the bills simply can’t struggle any harder. They are already giving everything they have just to survive. And when people can’t pay for air conditioning or heat, they die. When people end up homeless, they die. This request by AES is heartless and morally indefensible. You truly have a life and death decision on your hands - I hope it’s an easy one. It would be for me.

Regards,
Kathleen Schonsheck
Co-owner, Uptown Pup LLC

Date: Tuesday, August 12, 2025 3:06:38 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Way back in 2003, when AES bought IPL,
Mitch Daniels was quoted, "The sadness is that profit was not retained by every shareholder over the long term and that, of course, bothers me."
Yeah, it "bothers" him as much as someone who makes $1.4 million in the same deal can understand.
Indiana Toll Roads have been contracted out, a "Right To Work" law has been passed, and Indiana is now on Daylight Savings Time.

My point is that executives and people at the top end of big business have been exploiting Indiana residents and workers for 20 years
and it has got to stop. In a world of shrink-flation where Quaker oats both raised prices and reduced the size of granola bars,
now we have AES Indiana saying they are "facing higher costs for materials, labor, and services due to inflation and market conditions."
What they're not saying is they are wanting to charge more for pared-down services; (have you tried to talk to an AES Rep in person? Whatever happened to having a window with a human employee where you
could walk in and pay your bill, rather than the invasive practice of cameras at "kiosks," almost-mandatory direct-links to bank accounts,
a pared-down office staff, and an up-charge (er, penalty) if you want to maintain some of your privacy and pay by credit card.

With the availability of solar, wind, and geothermal energy, AES "proposal" to make utilities unaffordable / even more expensive
is nothing more than their own version of ***cheating Hoosiers into paying more for even less so executives can line their pockets***.

Instead of rate hikes, why not show leadership and re-hire humans to work at your payment centers?
Why not offer how-to clinics on making your own solar panels? Why not shade parking lots of
big-box stores with solar panels? Why not put solar farms in the parking lots of mostly abandoned
shopping malls (Some cities are turning vacant malls into urban farms; the idea of generating affordable
food and clean energy at the same location fits well). Why not work with CTE classes to have students
build and install solar panels for elders?

If a school district in Arkansas can install solar to save $$ and not only pay off student

lunch debt
(how is that even a thing?), but to run a surplus and sell power back to the state,

AES DOES NOT NEED A RATE HIKE; ***instead, compel its executives to show servant leadership***
by demonstrating they value humanity; hire more humans at your payment centers, make sure employees
have fully-funded 401ks / pensions and ample time off, make sure seniors stay warm in the winter
and kids have a leg up on a career...

Stop exploiting Indiana residents and show some respect for God's creation by partnering with
people to harness renewable energy.
NO NEW RATE HIKES!!!!

IURC Cause No. : 46258

Email: silverstream7l@gmail.com

City and Zip: Indianapolis, Indiana; 46235

Hello to all it may concern in regards to the public hearing of AES Indiana's rate hike proposal,

I am a 25 year old man that has moved recently into my own place last year. My experience regarding AES so far has been alright, however soured concerning how rates are adjusted especially how they are calculated during extreme weather conditions/months.

I have went through the outlets regarding the IURC, AES, news outlets, and the BBB (for which my testament remains on the BBB) on my disdain and skepticism towards my anecdotal (and other people's) experiences in relationship to how AES Indiana, in my eyes, has not gained the utmost good faith for myself.

Now with the positives, my electrical use is of relatively low consumption as I am one person with a small west Boston terrier residing within a 1000sqft, single family residence (keep in mind it is an all electric unit, so higher bills can be expected from time to time). AES bills as they have began last year (and as they began as of March or so this year) have been seemingly favorable averaging $70 approx. on low usage to $120 approx. on higher usage (more or less). So for most of the months from what I can track from a one year basis is decent at best.

What sours my attitude towards AES Indiana was how the estimates had skyrocketed on my electric bills pertaining to months they have said were due to the most intense winter weather we had experienced in years. I understand how electricity usage variation works in extreme months...and I disagree how they were evaluated for myself and as I've heard from other customers online that allegedly propose the same as I do now. It doesn't add up and no amount of meter evaluation will justify against my skepticism towards how I was charged (for which the IURC had conducted research into the matter and AES Indiana had read and

checked my meter, but I would also say 1.) I don't trust the company's validity in telling me that after the bills I have received and 2.) the evaluation was after the fact, so to me it seems like a false equivalency and I still believe more should have been done to resolve this issue).

That was a lot of words, but let me paint it this way, starting from my billing period on 12/10/2024 - 3/10/2025 I have been billed a total of $1,146.59 for the year already in electric bills alone. My highest adjusted billing period was from 1/10/2025 - 2/10/2025 totalling $549.38 (mind you I live with myself and my small west Boston terrier in a 1000sqft single family residence, working full-time.)

Now, that alone is an average of $95.55/mo just between 4 months alone...but for the year 2025. My TOTAL AVERAGE YTD in 2025 is a whopping $1,671.28 or $139/mo with 4 months to go for the year. That doesn't read well to me and likewise what of the people that have families who have had their bills allegedly skewed higher and including residences larger than mine? I can only imagine.

If anyone can explain to me from my 1/10/2025 - 2/10/2025 billing period, of how I used 4347.27/kWh of power/electricity (and I have the billing statement to prove that) based on my 1000sqft all-electric residence and personal usage I would implore them to do so. I don't think anyone can. AES Indiana hasn't, the IURC has not though they'd both like to propose to me they have and you expect me to be complacent with a 13% approx. rate hike on top of this? Just like the $550 approx. I spent from the 1/10/2025 - 2/10/2025 period alone? I don't think so.

I did not choose to be an AES Indiana customer because if I had the ability to choose, I would probably try to go with another utility company just on rates and estimates averaging alone, but there is no other choice to my knowledge in Indianapolis; within Marion County so I guess I just accept the costs no matter what? Perhaps so, but to have me agree to this rate hike in good faith...it will not come from me and speaking for myself my disdain towards AES Indiana will not diminish until proven otherwise in good faith and I hope they do and I hope there is a compromise now that would be beneficial to all parties. As it stands, I disagree and do not want the rate hike proposal to pass.

Thank you for everyone's time and for hearing me out.

Sincerely,
Lonnell Jones

Utilities: AES
Type of Inquiry: Case Comment
Comments: Per The IndyStar: Hoosiers hit with historically high electric bill increases, consumer watchdog study shows
Karl Schneider Indianapolis Star 7-24-25:Hoosiers are paying historically high energy rates from Indiana's investor-owned utilities, according to a new analysis by a consumer watchdog group.

Citizens Action Coalition collected and analyzed 20 years of data from five of the state's monopoly utilities — NIPSCO, CenterPoint, Duke Energy Indiana, AES Indiana and I&M — and found residents were hit this year with the highest year-over-year price increase since at least 2005.
The group's key findings show a statewide average energy bill increase of more than $28 per month — a 17.5% jump.
Per the United Way of Central Indiana's Report of ALICE (Asset Limited Income Constrained, Employed) Households In Central Indiana 2024 Update ALICE IN THE CROCURRENTS- AN UPDATE ON FINANCIAL HARDSHIP IN INDIANA: "In 2022, household costs in Marion County were well above the Federal Poverty Level of $13,590 for a single adult and $27, 750 for a family of four."

"In Indiana during 2022, 51% of households headed by people age 65+ were below the ALICE Threshold for Financial Survival. By 2022, 32% of families with children in Indiana were below the ALICE Threshold, including 75% of single-female-headed households and 52% of single-male-headed households. Between 2021 and 2022, the number of households in poverty in Indiana increased by 17,868 (13% of households) and the number of ALICE households increased by 18,255 (27% of households). In 2022, of the 2.7 million households in Indiana, 40% (over 1 million households) earned incomes below the ALICE Threshold of Financial Survival.

Simply put, the monthly utility cost increase sought by AES is an onerous and unnecessary burden for economically struggling households in Marion County and Central Indiana, especially for Senior Households aged 65+; and single female and single male households in Central Indiana and across the state.

Re: Opposition to AES Indiana Rate Increase Cause No. 46258. **To:** Indiana Utility Regulatory Commission
From: Current AES Customer Melissa Wilkerson **Address:** 9132 Wilshire Glen Dr., Indianapolis, IN 46234 **Date:** 08/31/2025
Email: mccollummd19@gmail.com

I respectfully urge the Commission to **deny** AES Indiana's requested rate increase or, at minimum, require strict **cost causation** protections so that ordinary households are not forced to subsidize new, large-scale electricity users.

Bills are already up 42% in five years. According to the IURC's Residential Bill Surveys, the typical AES Indiana residential bill at 1,000 kWh rose from **$111.55 (2020)** to **$158.26 (2025)**—an increase of **$46.71**, or roughly **41.9%** in five years. The Commission's 2024 survey also shows AES's new base rate approved in 2024 and the continued upward pressure on bills. Many Indianapolis families cannot absorb another hike on top of these increases. Government of India+1Indiana Government

Large new loads are driving costly build-outs, those loads must pay their way. AES Indiana has openly sought bids for **new gas-fired generation** to serve "**large-scale customers**," while the Commission adopted **large-load interconnection rules** in 2025 to handle data-center hookups. If AES must spend billions on new plants, substations, and transmission to serve these loads, the **full incremental cost**—including financing and risk—should be borne by the **cost causers**, not residential or small-business ratepayers. Indianapolis Business JournalUtility Dive

Meanwhile, Big Tech receives decades long tax breaks on electricity. Indiana's **Data Center Sales & Use Tax Exemption** waives **sales tax on power and equipment** for **25–50 years** for qualifying data centers. In 2025 alone, the state approved **about $168 million** in incentives for four data-center projects (most in the Indy area), and public reports estimate **hundreds of millions** more in foregone sales-tax revenue on equipment purchases. It would be inequitable to **compound** these subsidies by shifting utility infrastructure costs onto families through higher electric rates. Indiana Economic Development CorpIndianapolis Business JournalData Center DynamicsMirror Indy

Requested conditions if any increase is considered:

1. **Cost-Causation:** Require tariffs and interconnection agreements that ensure **new large loads** (e.g., hyperscale data centers) pay **all** incremental generation, transmission, and distribution costs—including contingencies—so residential customers are held harmless. Utility Dive

2. **No hidden discounts:** Prohibit special-contract discounts or riders that shift costs to other customer classes, and require public reporting of any such agreements. (Note: AES Indiana's own **Economic Development Rider** shows

no executed customers as of 12/31/2024; any change should be transparent and cost-neutral to others.) iurc.portal.in.gov

3. **Affordability guardrails:** Tie any allowed increase to measurable service improvements (outage duration/frequency, customer service metrics) and expand low-income protections.

4. **Resource prudence:** Require AES to demonstrate the **least-cost** portfolio for serving incremental load, prioritizing demand-side management and non-wires alternatives before new thermal build-outs. Government of India

Indianapolis households have already carried substantial bill increases in recent years. Before raising rates again, the Commission should ensure that **corporate mega-load,** not families, pay for the new infrastructure they make necessary.

Thank you for considering my comment.

Sincerely,
Melissa Wilkerson

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

My info:
Patricia Scott, Indianapolis, 46260

I am an AES customer and want to express my concern about pending rate increases by AES. I am expressing a hard NO to any additional rate increases. Ever since AES took over from IPL, it has been a mess. Billing has been messed up, communication and customer service has been messed up, and more power outages than ever before - including random ones, not due to storms. I totally understand that when the weather is extra hot there is more usage. Yet in comparison to prior years during comparable weather, current rates are untenable. I am 70 yrs old, in a single family home, and I have kept my thermostat at 75 degrees during these very hot weeks.

As a consumer, I am concerned about where the money has been spent from prior rate increases. The public has no idea where it goes. How many executives have had pay increases on the backs of the general public? The need for "infrastructure" is pretty general. Is it truly infrastructure that will ultimately provide more efficiency to decrease usage and costs? Likely not. I appreciate that there is a forum for public comments online and in person. An increased rate would create a hardship for me - and I'm able (at this point) to pay my bill monthly. Yet there are so many people, especially older people on fixed incomes, for whom it has simply become unaffordable, and I fear that for my future as well. An additional (up to) 13.5% in rates is scary.

Thank you!
Patricia

Subject: Proposed AES Rate Increase
Date: Wednesday, June 4, 2025 8:20:33 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I am writing to formally express my concern and strong opposition to the proposed rate increase by AES Indiana. This decision comes at a time when many in our community are already grappling with the financial impacts of inflation, rising housing costs, and stagnant wages. Increasing utility rates now would place an undue burden on households and small businesses that are struggling to stay afloat.

In particular, this rate hike feels especially tone-deaf in the context of the recently announced proposal to support a data center in the city. While economic development is important, it is unacceptable for the cost of such ventures to be passed on to everyday ratepayers—especially when those projects often benefit private corporations more than the communities that host them.

Our electric bills should not become a subsidy for speculative corporate partnerships. Any infrastructure improvements or energy capacity expansions needed to support this new data center should be funded by the developers and corporate stakeholders behind it—not by working families.

The timing and justification for this rate hike seem out of step with the economic realities faced by customers. I urge you to reconsider this proposal and prioritize affordability, transparency, and fairness in AES's operations and pricing structures.

Sincerely,
Michael Thompson

From: Amanda Studor Bond
To: UCC Consumer Info
Subject: Public Comment Opposing AES Indiana Rate Increase
Date: Friday, June 6, 2025 10:34:29 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear OUCC Consumer Services,

My name is Amanda Studor Bond. I am both a residential customer of AES Indiana living in Indianapolis, 46220, and professional working on behalf of local commercial real estate firms. I am writing to strongly oppose AES Indiana's petition for a massive 14% rate increase by 2027 (**Cause No. 46258**). This proposed increase is excessive, poorly timed, and places an unfair burden on residential and business customers.

Timing and Financial Impact
This rate increase comes at the worst possible time. AES Indiana just received a 1.5% increase in May 2024 and now seeks an additional 14% - creating a cumulative impact devastating for households. As a residential customer expecting our first child in January 2026, this increase would add $45-75 to my monthly bill, making electricity service increasingly unaffordable when my family needs financial stability most.

AES Indiana's Operational Failures
My concerns extend beyond rates to AES Indiana's fundamental management problems. The company's $84 million billing system upgrade in late 2023 failed nearly 62,000 customers, including my household. For approximately 8 months, I received no bills or incorrect bills, then was hit with a sudden $1,500 bill when their system caught up. Despite spending $84 million on this failed upgrade, they now expect customers to fund another massive rate increase.

From my professional work with commercial real estate firms on utility data management, AES Indiana is consistently problematic compared to other utility providers. We regularly request data for client compliance and financing requirements, including HUD and Green Loans. AES Indiana is consistently unresponsive, missing critical deadlines that impact clients' ability to secure financing. This poor service record raises serious questions about their ability to manage the massive capital investments they're seeking to fund.

Misplaced Priorities
Most concerning, this rate request focuses primarily on infrastructure cost recovery rather than addressing service quality issues. The petition emphasizes capital expenditures but provides no plan for improving customer service, billing reliability, or responsiveness. While citing "Five Pillars" including affordability, their request contradicts this principle with increases far exceeding inflation and wage growth.

The proposed rate structure changes shift more costs to fixed charges customers

cannot control through conservation, undermining energy efficiency incentives and forcing customers to pay more regardless of usage patterns.

Request for Commission Action
AES Indiana has not justified this massive increase given their operational failures and poor service record. The petition focuses on cost recovery for already-approved projects rather than new environmental initiatives to reduce fossil fuel reliance. A utility that cannot reliably bill customers or respond to basic data requests should not be rewarded with massive rate increases.

I respectfully request that the Indiana Utility Regulatory Commission:

- **Deny** this proposed rate increase
- **Require AES Indiana to demonstrate** genuine operational necessity for any increases beyond normal inflation adjustments
- **Mandate better cost management** and efficiency improvements before approving customer rate increases
- **Consider the cumulative impact** of recent and proposed increases on customer affordability
- **Ensure any approved increases are phased** over a longer period to reduce customer impact

Thank you for considering these comments in your review of this case.

Verified Direct Testimony of Kimberly Aliff . This document has outdated and incorrect information

Analysis of Information Accuracy in AES Indiana Regulatory Documents

The search results contain multiple documents related to AES Indiana's rate case and regulatory filings. Upon careful review, **several areas present potential accuracy concerns** or outdated information that warrant examination.

Outdated Bill Information

The Citizens Action Coalition document presents the most significant accuracy issue, as it displays AES Indiana bill information dated February 22, 20242. Given that the current date is June 4, 2025, this billing breakdown is over a year old and no longer reflects current rates. The document shows a total monthly bill of $117.31 for 896 kWh usage, but this calculation was based on rates that have since been superseded by the April 2024 rate approval mentioned in the regulatory proceedings310.

Estimated vs. Actual Rate Impacts

The AES Indiana rate review website contains estimates that may not accurately reflect the final approved rates11. The site projects Phase 1 increases of "up to $12 or 7.5%" and Phase 2 increases of "up to $9 or 6%" for residential customers using 1,000 kWh monthly. However, the regulatory testimony filed simultaneously shows a revenue deficiency of $192.9 million1, which represents a substantial increase that may not align precisely with these customer-facing estimates. These estimates are explicitly labeled as subject to regulatory review and may change significantly.

Regulatory Asset Amortization Periods

The testimony contains several instances where regulatory asset amortization periods have been modified from previously approved timeframes1. For assets forecasted to be fully amortized before the end of 2026, AES Indiana proposes extending amortization to three years "for ease of administrative burden," even though this results in longer recovery periods than previously authorized. This represents a departure from established regulatory precedent and may not accurately reflect the Commission's final determination.

Timeline Inconsistencies

While most timeline information appears consistent, there are potential discrepancies in project completion dates. The Petersburg Units 3 & 4 repowering project is referenced with completion "by end of 2026"11, but the regulatory asset treatment suggests uncertainty about meeting this deadline, with alternative recovery

mechanisms proposed if the project is incomplete1.

Conclusion

The most significant accuracy issue involves the outdated billing information from 2024, which no longer represents current customer costs. Additionally, the estimated rate impacts presented to customers may not precisely align with the revenue requirements detailed in the regulatory filing. While the regulatory documents themselves appear internally consistent, several proposed changes to previously approved amortization schedules represent modifications that require Commission approval and may not reflect final determinations.

On Wed, Jun 4, 2025 at 9:48 AM Stephen Jones <stephendanieljones@gmail.com> wrote:

Response to Price Increase Notification Cause Number 46258

Residential Affected Customer

Dear Indiana Office of Utility Consumer Counselor.

I am writing to express my strong disappointment regarding your recent price increase announcement. After careful consideration of the current economic environment, I find this increase both unjustified and poorly timed.

Inflation Is Moderating, Not Accelerating

According to the latest data from the U.S. Bureau of Labor Statistics, the annual inflation rate has decreased to 2.3% for the 12 months ending April 2025, down from previous rates17. In fact, projections indicate inflation may drop further to 1.9% for May 20258. This downward trend in inflation contradicts any justification for raising prices based on increasing costs.

Consumer Purchasing Power Is Already Strained

While wages have grown nominally by 4.1% over the past year9, many consumers continue to face financial challenges in this uncertain economic climate. The Federal Reserve has maintained interest rates at 4.25%-4.5%1417, which keeps borrowing costs high for average Americans who are still recovering from the inflation surge of 2022-2023.

Economic Uncertainty Looms

The Federal Reserve has explicitly noted that "uncertainty about the economic outlook has increased further" and that "the risks of higher unemployment and higher inflation have risen"14. In this precarious environment, your price increase places additional financial burden on loyal customers who are already navigating economic uncertainty.

Your Increase Exceeds Market Norms

The Cleveland Fed's inflation nowcast estimates only a 0.12% month-over-month increase in the Consumer Price Index for May 202515. Your proposed price increase significantly exceeds these moderate inflation projections, suggesting you're attempting to expand profit margins rather than simply covering higher costs.

Recent Legislative Context

The introduction of the Raise the Wage Act of 2025 highlights ongoing concerns about income inequality and purchasing power for American workers3. While this legislation aims to increase minimum wages to help workers gradually, your immediate price hike works directly against these efforts to improve financial stability for average Americans.

I urge you to reconsider this increase in light of these economic realities. At minimum, I request that you delay implementation until economic conditions stabilize or consider a more modest adjustment that aligns with actual inflation rates.

As a loyal customer who values your products/services, I hope you will prioritize customer relationships and long-term loyalty over short-term profit gains during these uncertain economic times.

Sincerely,

Stephen Jones, 317-696-1324

AES Indiana is planning for a more resilient future

horizontal line with AES gradient colors

Dear AES Indiana customer,

For over a century, AES Indiana has proudly delivered safe, reliable, and affordable electric service to homes and businesses throughout Central Indiana. Today, we're planning for a future that continues to meet the evolving needs of our

more than 530,000 customers while accelerating the energy transition to cleaner and more efficient energy solutions. AES Indiana has filed a Regulatory Rate Review with the Indiana Utility Regulatory Commission (IURC) to ensure we can continue delivering the safe, reliable electric service you count on while preparing for the future.

Why did AES Indiana file a rate review?
We're making important investments to better serve you, including:

- More reliable service during storms and extreme weather
- Stronger infrastructure to reduce outages and speed up restoration
- Addressing rising costs for materials, labor, and maintenance like trimming trees away from our power lines and storm response

Just like many businesses, our costs have gone up, and this allows us to continue delivering the value and service you expect and deserve. For example, from 2022 to 2025, the costs to trim one mile of trees away from our power lines has increased by 185%.

What does this mean for your bill?
If AES Indiana's request is approved by the IURC, a residential customer using 1,000 kWh per month will see an increase of about 13.5% - or up to $21 - in two phases:

- Up to 7.5% in Q2 of 2026 and
- Up to 6% in January 2027

In addition to this requested rate review, AES Indiana customers will see a 6% bill increase in 2026 compared to bills in 2025 due to approved projects, such as the Pike County Battery Energy Storage Solution, Petersburg Energy Center and grid improvements forecasted to be complete through 2026.

AES Indiana is here to help you take control of your energy use and your bill. Use our bill calculator to estimate the impact based on your electricity use and find more information about ways to save energy and money on our website.

Stay Informed

1. Bookmark our dedicated rate review webpage and check back for updates
2. Follow us on our social media channels on Facebook, X, Instagram, and LinkedIn
3. Make sure your contact information in your online account is updated

Thank you for being an AES Indiana customer. We're committed to reliably powering your home and supporting the growth of our community – now and for years to come.

Type of Inquiry: Case Comment
Comments: Hello. As an Indianapolis citizen and (forced) customer of AES, I am writing to strongly oppose the next series of rate increases by AES. It egregious proposal is the WRONG answer to this problem. We all obviously understand the need for increasing disaster prevention and recovery resources, but once again, AES is making it a problem of the citizens of Indianapolis, when it is their problem to solve. They are a necessary utility or the PUBLIC; therefore, they should be solving their own problems. This is the laziest and most egregious attempt at scraping money from citizens when there are plenty of other opportunities and avenues for them to achieve this. Not to mention, they haven't been proving to us—their customers—that the previous increases have helped us in any way. Their executive suite brings home salaries of millions of dollars a year. They recorded profits of nearly $700,000,000 in 2024. They haven't proved that they are invested that in us, only that they are investing that in their shareholders and their executives' pockets. I work in business and there is a clear difference between shareholders and stakeholders. We, the citizens who have no other choice than to use AES, are the stakeholders. They are responsible to us.

These rate increases are impacting real people across this city who are struggling already to make ends meet. The people who continually and historically are hit the hardest by this are the people who struggle the most. We already have a housing and homelessness crisis.

We cannot be a world-class city that we claim to be if we continually prioritize corporate profits over CITIZENS and basic human rights.

We cannot let these corporations walk all over us. We cannot constantly give them longer leashes to walk all over us with. We cannot let this continue. We have to stand up for THE PEOPLE OF THE CITY and not the executives. Especially when the executives of AES are based out of Arlington, Virginia, which is, in fact, historically not part of Indianapolis nor the state of Indiana.

Type of Inquiry: Case Comment
Comments: I tried to comment about this now for several days, yesterday 8-30 I was at the Ft. Ben library and had 45 minutes to comment but it was not saved, the pc shut down without me getting a complete thought expressed about this.
I am Against This rate increase in IURC Cause N. 46258.

It seems very excessive since the company has been making a profit off of its customers as I was told at the last meeting of the IURC and OUCC at the old Ft. Benjamin Harrison Officers and Civilians clubs dining hall. That was a packed meeting, SRO), and I had to stand, but the room could have been opened up to allow more space, its partition wall was closed off, WHY?

However, AES should be told of its customers that are too job and income poor yet have a paid for house with already too high utility rates, which the company is apparently got state government legislators to write into the state law codes that people are forbidden from generating their own electric power and having their excess power sold off to the electric grid, as one of the testifiers said late at the meeting which I was the last of the AES customers, the IURC members, and the OUCC members or media workers to leave the building. I wrote my info above in the spaces provided here on this internet form as best as I could, but without home, or work, or auto internet, or smart phone service internet, I have no accessible internet for you workers at the AES, or IURC, or OUCC to try and contact me about this written testimony. Your form requires an internet EMAIL address, as I have no access to it, I said so in the "EMAIL" field I was required to fill in to leave this comment. I hope this does not irritate any of you who read this. I will attempt to print out a hard copy of this form and comment, to maybe send to each of the 3 of you, IURC, AES, and OUCC. I might send printed out copies of this comment form to the other "additional parties have intervened in this case, including the Citizens Action Coalition of Indiana, City of Indianapolis, ..."

I also want you all to know that I ride a bicycle everywhere I need to and have to go. I believe I may be unemployable, I have not had paid employment since election day worker in 2012. I worked the elections starting in 1982, and was a precinct inspector in the elections years 1984 to 2006. I refuse to submit my own head to a boss for them to order around on his/her whims as a slave anymore, that I have almost zero income, less than 7 dollars a year I find as loose coins on the streets, sidewalks, bicycle paths, parking lots, and sometimes in my own end of my driveway near the street. I perhaps believe that a congressional order or law could be written to make the fossil fuel burning businesses not charge us all for what they may be get out of the ground, under pressure for free, otherwise known as mother earth, which we all own as residents of her. Yes their equipment to drill and collect and transport the fossil fuel is not free. They deserve to make a small highly regulated profit of of their work. That being the case, exactly what and how much profit should I get for helping to save our mother Earth by bicycling, and picking up everyone who tosses out of their autos trash? I sometimes get hit by the glass bottles and sometimes cans of urine I

get hit with while riding!

Utilities: AES Rate Case Cause #46258
Type of Inquiry: Case Comment
Comments: Will any of this rate increase be used to improve service for those of us on smaller neighborhood lines that run through trees? I've lived in my house for 26 years. Service has gotten progressively worse. I'd encourage you to review outage information for the line that runs on the west side of Melbourne Road South Drive between 42nd and 46th St. I've been told by a linesman that the line is made of material not used since the 1990s. The tree trimming is a joke. It is common for our power to go out on bright sunny days because a branch snaps. Doesn't take a very large branch to snap the line. Restoration is slow. Frequently the linesmen have to do the tree removal because no tree service shows up. Very poor use of the skilled linesmen. I am not supportive of this rate increase unless AES is required to publish a plan/schedule showing how they are going to improve service to areas/lines like the one I live on. Rate increases should only be approved incrementally as improvements to these types of areas are made. Otherwise, we are being forced to pay for improved service we will never receive.
Thank you.

OUCC Public Comments
115 West Washington St., Suite 1500 South
Indianapolis, IN 46204

To Whom It May Concern,

I am writing as a concerned resident and utility customer to express my strong opposition to AES Indiana's latest proposal to raise electric rates by an additional 13%. This increase comes directly on the heels of last year's significant rate hike, which has already left households like mine paying nearly double what we did previously.

For ordinary Hoosiers, this is not just an inconvenience — it is an impossible burden. In recent years, families have been crushed by rising costs: skyrocketing property taxes (mine alone have increased 250% since 2017), food prices, health insurance premiums, and homeowners' insurance rates, and now doubling in nearly every aspect of daily life due to pointless tariffs. Adding another double-digit percentage increase in utility bills is simply unsustainable.

The stories I've personally witnessed illustrate the devastating impact. At a recent hearing you held, I listened as elderly residents shared how they cannot afford to keep their lights on. One woman, fresh from dialysis, described returning home to find that her electricity had been shut off. This is not hypothetical. These rate hikes are forcing people to choose between survival and basic dignity.

At the same time, Indiana is seeing a surge in interest from large-scale data centers and other energy-intensive industries. These facilities consume massive amounts of electricity and require significant upgrades to the grid. It is only fair and just that any new data centers or similar operations be required to cover the full costs of infrastructure additions and the energy they demand, rather than shifting those costs onto families, retirees, and small businesses who are already struggling. Everyday Hoosiers should not be asked to subsidize corporate expansion, particularly when they are already receiving significant tax incentives that are also being carried by residents.

Meanwhile, AES's CEO earns a whopping $13 million per year. That's 250% what an average employee makes – and all while people are losing their homes because they're being priced out of being able to

afford basic necessities. It is unconscionable that corporate executives continue to profit like this while Indiana residents are asked to sacrifice more.

I urge the OUCC to recognize that these increases are not only excessive but fundamentally unjust. The cumulative effect is crushing the elderly, middle-class families, and working households. Approving another 13% hike would accelerate a crisis that many Hoosiers are already living. I can tell you for certain that my 3% annual raise has absolutely not covered the increases I've been hit with in every direction.

Please reject AES Indiana's request for this additional increase. We cannot continue to absorb these costs — and we should not have to.

Respectfully,

Lynette Rowland

8/23/25

TO WHOM THIS CONCERNS

IN REGARDS TO THE AES SITUATION. HOW LOW CAN YOU ALLOW THIS UTILITY CO. TO GO? AES IS USING US FOR THEIR GAIN, NOT OURS. THEY BEING ALLOWED TO DO WHATEVER THEY WANT TO, AND GET AWAY WITH IT. AES IS SUCKING THE LIFE OUT OF US, LIKE A BUNCH OF HOOVERS. THEY ARE LIARS, CHEATERS, THEY ARE TRIFLING, AND DEPLORABLE.
WE ARE HUMAN BEINGS, NOT JUST NUMBERS FOR THEM TO USE LIKE ATM'S WHEN THEY WANT MORE MONEY FOR THEIR HIGH LIVING LIVES. AES HAS NO CONCERN OR CARE ABOUT US AS CUSTOMERS. THEY NOT ONLY MESSED UP THE SYSTEM, THEY HAVE CUT OFF ALL HUMAN CONTACT WITH THE COMPANY. THEY CLOSES THE OFFICE ON 21ST AT N. ILLINOIS. PUT IS OUT SIDE TO PAY OUR BILLS IN ALL KIND OF WEATHER, WITH TWO KIOSKS THAT DIDN'T HALF WORK IN THE COLD WEATHER WHILE WE WERE OUT THERE FREEZING! TRIFLING!
WELL SO NOW I FOUND OUT THAT NOW THE 'KIOSKS ARE CLOSED AS WELL!! WHAT NOW? WILL THEY SHUT DOWN THE PHONE LINES, ALREADY RUN BY MAINLY A.I.'S.
OK, NOW TO THE PRICE RAISES. THIS SHOULD NOT BE ALLOWES, AT ALL! HOW MUCH MORE CAN AES SUCK US DRY. ANY TIME THAT THEY WANT MORE MONEY IT'S ON US. AND NO ONE HAS EVER EXPLAINED TO US ABOUT THE 17$ SCAM CHARGE CALLED A 'CUSTOMER CHARGE', IT IS ANOTHER SCAM TO

GET MONEY FROM US! I HAVE THE FIRST BILL THAT THAT CHARGE CAME ON THE BILLS, SO THEY NEED TO STOP LYING AND SAYING THAT IT WAS ALWAYS THERE. TRIFLING! SO NOW THEY WANT TO RAISE THE PRICE ON US AGAIN? WITH WHAT THEY WANT TO DO, WHATEVER IT IS, IT IS CORRUPT! WE AS CUSTOMERS ARE NOT RESPONSIBLE FOR AES PROJECTS, THEY NEED TO FIND A WAY TO SUPPORT WHATEVER THEY NEED. WE SHOULD BE ABLE TO VOTE AND CHOOSE IF WE WANT TO DONATE TO THEIR CASE. NOT FORCE US TO GIVE THEM MORE MONEY THAT A LOT OF DON'T HAVE. EXAMPLE: LIGHTING UP THE CIRCLE DOWNTOWN AND MAKING DESIGNS AND PICTURE WITH LIGHTS IN THE EAS BUILDING WINDOWS. I'M SURE THAT A LOT OF US, ESPECIALLY SENIORS, WOULD HAVE VOTED TO WASTE OUR MONEY ON THAT CRAP.
THERE NEED TO BE LIMITS ON WHAT AES CAN FORCE US TO DO WITH OUR MONEY. THE ONLY THING THAT WE ARE RESPONSIBLE FOR TO PAY AES IS FOR OUR ELECTRIC USAGE AND TAX! NO MORE. I AM A SENIOR AND SOCIAL SECURITY DOES NOT SEND US ANY EXTRA MONEY TO PAY BILLS WHEN DISPICABLE CORPORATIONS LIKE AES WANT TO RAISE THE RATES! A LOT OF US ARE BARELY LIVING DECENTLY AS IT IS. WE GET ONE LITTLE RAISE (MAYBE) A YEAR, WHICH AMOUNTS TO NOTHING FOR US, ESPECIALLY WHEN PEOPLE LIKE AES RAISE RATES MORE THAN THE RAISE WE GET FROM OUR SOCIAL SECURITY!

ON TOP of THAT, 2 OR 3 OTHER bills will go up AS WELL, COMPETING TO GET THAT ONE LITTLE S.S. RAISE. THEN WHAT, WE HAVE TO FIGURE OUT how IN HELL WE will PAY All THAT! AES, GET SOME BRAIN CELLS, WE ARE NOT ATM'S. BETWEEN YOU, RENT, FOOD & DAILY NEEDS like MEDS, THAT WE RELY ON TO LIVE, WHAT ARE WE TO DO.? THERE ARE MORE HOMELESS SENIORS OUT THERE NOW THAN I HAVE EVER SEEN. BECAUSE of THE VULCHERS OUT HERE like EAS, AND PEOPLE CANIT AFFORD TO PAY TO HAVE SOME WHERE TO LIVE AND HAVE UTILITIES ON. THERE ARE MORE HOMELESS PEOPLE ALL OVER THIS CITY of ALL AGES, A LOT of WOMEN WITH CHILDREN WITH NO HOMES.
AES, WE ARE HUMANS JUST LIKE YOU, NOT TO BE TAKEN ADVANTAGE of TO FOOT YOUR NEEDS AND WANTS, TREAT US AS YOU WANT TO BE TREATED LIKE A LOWER FORM of LIFE, PEOPLE ARE TRYING TO GET off THE GRID SO AS NOT TO HAVE TO DEAL WITH BUSINESSES like EAS. (NOT A BAD IDEA)
EAS NEEDS TO GET A NEW MIND SET. TREAT US FAIR, do NOT USE US FOR YOUR PERSONAL ATM'S. RESPECT US, BECAUSE without US YOU will HAVE NOTHING.
DO NOT RAISE OUR BILLS, AND GET RID of THAT 17$ SCAM CHARGE. WE DID NOT ASK FOR THAT! DO UNTO OTHER AS YOU WOULD DO UNTO YOURSELFS.

Indiana Utility Regulatory Commission, Cause No. 46258

citact.org/aes-rate-hike-2025

Introduction:

My name is M A R C E L L A T A Y L O R.

I am a residential electric customer of AES Indiana.

I request that the Commission deny AES's proposal, which will increase the monthly cost for electricity by another $30 a month – a significant burden for ALL Indiana households – working poor, families, retired residents especially.

Why This Rate Hike Would Be Unaffordable:

AES's proposed electric rate hike would be harmful to me as well as my community.

As a retiree, my monthly budget is extremely tight with little to no indulgences – temptations for which bombard the public constantly. I practice economy tightly and practice conservation in every way available.

Specific Requests of the Commission:

I request that the Commission reduce the burden on residential customers by taking the following actions.

<!--[if !supportLists]-->● <!--[endif]-->First, I ask that the Commission examine with scrutiny the financial records of AES and determine why it is asking for a rate increase AGAIN. What is their current profit margin and WHY are the asking for another increase?

<!--[if !supportLists]-->● <!--[endif]-->Second, please deny AES's proposed residential fixed charge increase. AES's proposed fixed charge of $20 would be an 18% increase from their current fixed charge of $17.

- Third, what is this business about residential customers subsidizing the electric rates of large industrial and commercial customers? If that is what is being proposed, NO! I ask that you deny AES's request that residential customers like me subsidize the electric rates of large industrial and commercial customers, including data centers.

- WHAT IS THE JUSTIFICATION for residential households to pay a much high rate increase than corporate customers. According to online info these are the proposed rates:

  Households rate increase would be 13.45%. It further states that large corporate customers rate large corporate customers 6.18%, and small commercial customers, 6.18%, 8.72% for medium commercial and 2.5% increase for large industrial customers. Explain those inequities.
  <!--[if !supportLineBreakNewLine]-->
  <!--[endif]-->

- Finally, AES just got an electric rate hike last year, and they have put their customers through the ringer. It is well known what hardships residents in various parts of the city experienced in the past year with prolonged power outages.

Just because the citizenry of our country is being abused from within by the current federal and state governmental administrations, it does not follow that corporations should – or can -- have the right to follow suit.

I attended the public hearing on at the Garrison at Ft. Harrison. There were many eloquent speakers who presented varied perspectives and analyses. I supported and respected their research and personal perspectives. I had these (herein written) comments ready to present, but I heard their voices with more passion than mine. But here are mine to go into the file AGAINST the rate hike.

Conclusion:

In conclusion, please deny AES's rate hike. Please protect consumers and prioritize affordability when deciding this case.

Response to Price Increase Notification Cause Number 46258

Residential Affected Customer

Dear Indiana Office of Utility Consumer Counselor.

I am writing to express my strong disappointment regarding your recent price increase announcement. After careful consideration of the current economic environment, I find this increase both unjustified and poorly timed.

Inflation Is Moderating, Not Accelerating

According to the latest data from the U.S. Bureau of Labor Statistics, the annual inflation rate has decreased to 2.3% for the 12 months ending April 2025, down from previous rates17. In fact, projections indicate inflation may drop further to 1.9% for May 20258. This downward trend in inflation contradicts any justification for raising prices based on increasing costs.

Consumer Purchasing Power Is Already Strained

While wages have grown nominally by 4.1% over the past year9, many consumers continue to face financial challenges in this uncertain economic climate. The Federal Reserve has maintained interest rates at 4.25%-4.5%1417, which keeps borrowing costs high for average Americans who are still recovering from the inflation surge of 2022-2023.

Economic Uncertainty Looms

The Federal Reserve has explicitly noted that "uncertainty about the economic outlook has increased further" and that "the risks of higher unemployment and higher inflation have risen"14. In this precarious environment, your price increase places additional financial burden on loyal customers who are already navigating economic uncertainty.

Your Increase Exceeds Market Norms

The Cleveland Fed's inflation nowcast estimates only a 0.12% month-over-month increase in the Consumer Price Index for May 202515. Your proposed price increase significantly exceeds these moderate inflation projections, suggesting you're attempting to expand profit margins

rather than simply covering higher costs.

Recent Legislative Context

The introduction of the Raise the Wage Act of 2025 highlights ongoing concerns about income inequality and purchasing power for American workers3. While this legislation aims to increase minimum wages to help workers gradually, your immediate price hike works directly against these efforts to improve financial stability for average Americans.

I urge you to reconsider this increase in light of these economic realities. At minimum, I request that you delay implementation until economic conditions stabilize or consider a more modest adjustment that aligns with actual inflation rates.

As a loyal customer who values your products/services, I hope you will prioritize customer relationships and long-term loyalty over short-term profit gains during these uncertain economic times.

Sincerely,

Stephen Jones, 317-696-1324

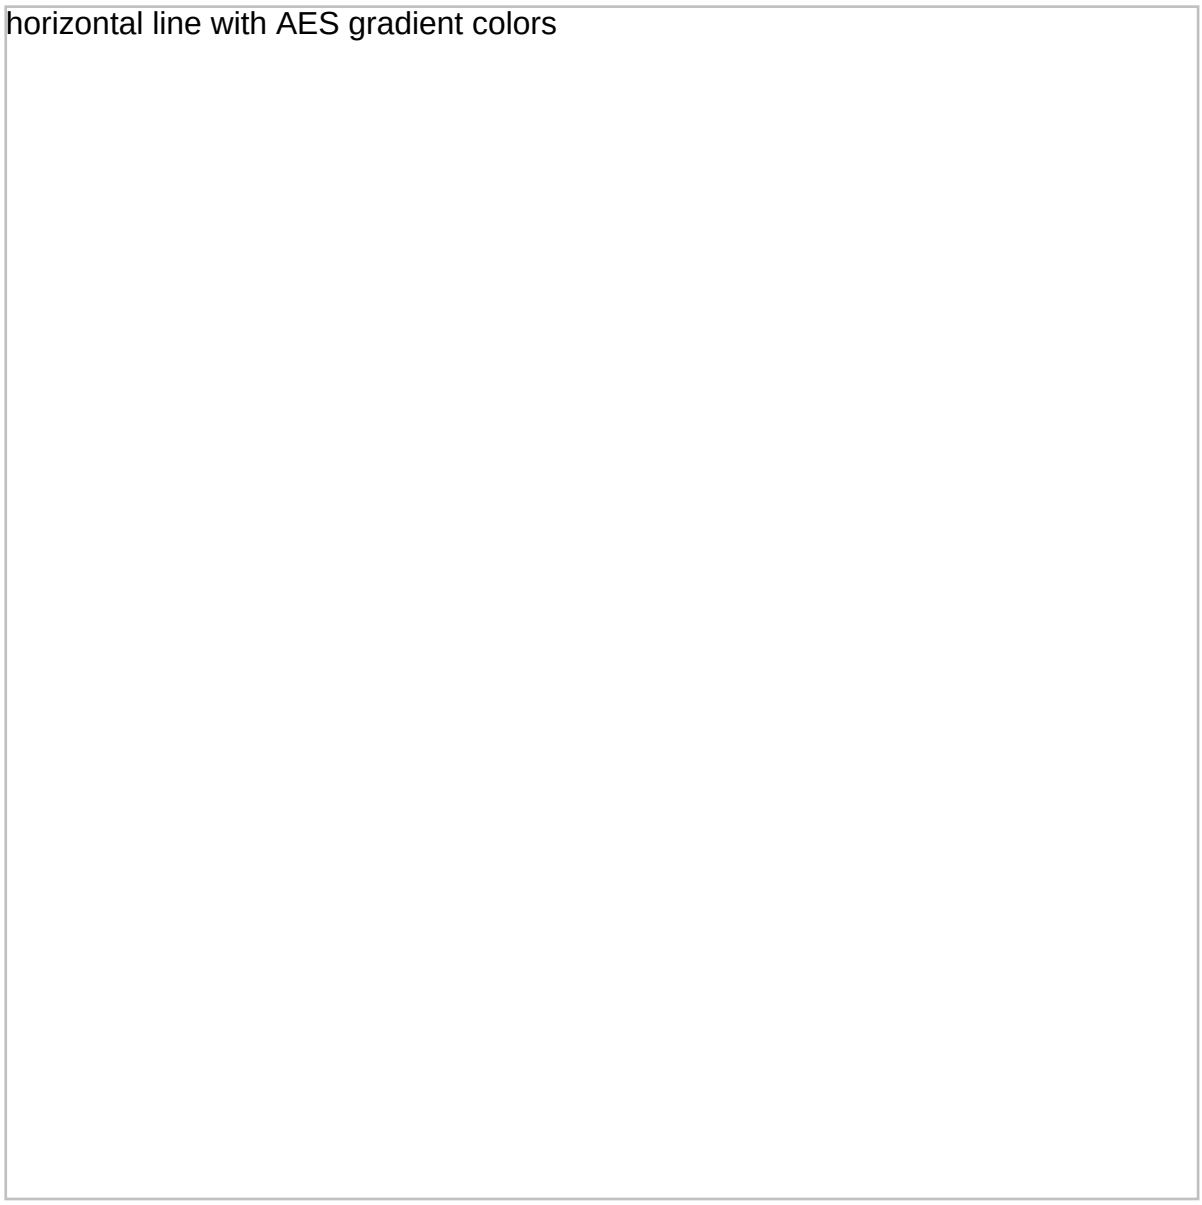
AES Indiana is planning for a more resilient future



Dear AES Indiana customer,

For over a century, AES Indiana has proudly delivered safe, reliable, and affordable electric service to homes and businesses throughout Central Indiana. Today, we're planning for a future that continues to meet the evolving needs of our more than 530,000 customers while accelerating the energy transition to cleaner and more efficient energy solutions. AES Indiana has filed a Regulatory Rate Review with the Indiana Utility Regulatory Commission (IURC) to ensure we can continue delivering the safe, reliable electric service you count on while preparing for the future.

Why did AES Indiana file a rate review?
We're making important investments to better serve you, including:

- More reliable service during storms and extreme weather
- Stronger infrastructure to reduce outages and speed up restoration

- Addressing rising costs for materials, labor, and maintenance like trimming trees away from our power lines and storm response

Just like many businesses, our costs have gone up, and this allows us to continue delivering the value and service you expect and deserve. For example, from 2022 to 2025, the costs to trim one mile of trees away from our power lines has increased by 185%.

What does this mean for your bill?
If AES Indiana's request is approved by the IURC, a residential customer using 1,000 kWh per month will see an increase of about 13.5% - or up to $21 - in two phases:

- Up to 7.5% in Q2 of 2026 and
- Up to 6% in January 2027

In addition to this requested rate review, AES Indiana customers will see a 6% bill increase in 2026 compared to bills in 2025 due to approved projects, such as the Pike County Battery Energy Storage Solution, Petersburg Energy Center and grid improvements forecasted to be complete through 2026.

AES Indiana is here to help you take control of your energy use and your bill. Use our bill calculator to estimate the impact based on your electricity use and find more information about ways to save energy and money on our website.

Stay Informed

1. Bookmark our dedicated rate review webpage and check back for updates
2. Follow us on our social media channels on Facebook, X, Instagram, and LinkedIn
3. Make sure your contact information in your online account is updated

Thank you for being an AES Indiana customer. We're committed to reliably powering your home and supporting the growth of our community – now and for years to come.

To Whom It May Concern:

Seniors are always the one impacted when there is any type of rate increase. Most seniors including myself are retired, on a budget and have no increase of income yearly. The proposed COLA will not cover the rate increase, plus increase to the Medicare premium. This means for seniors that are struggling financially will be a hardship. Please as you consider this increase think of your seniors that will be impacted.

I understand that the utilities need to sometimes be upgraded and it comes at a cost, but to who? Personal assistance over the phone is no longer available. You have to speak to the robot first in order to speak to an agent. There is cost saving because there is no longer a need for as many costumers service agent. Apply that savings toward your upgrade.

Companies need to take the brunt of increases instead of looking to the people. For middle class $21 may not seem as much, but for seniors it is a matter of food, meds or paying the increase for AES. Yes, I'm an AES customer.

Thank you for your consideration.

Concerning the:
AES Indiana rate case
reference: # 46258

Many of the citizens or all cannot afford another increase. Especially being on a fixed income Social Security. I don't have enough money now to last from month until the next. And its seems we are having more and more outages then ever before. And when we loose food because of the outages we get no money for it. That's not right. A whole fridge & ice box ruined no power.

Years, years ago at least you gave out vouchers to replace your foods. If you stop that, Now what are we ~~supp~~ supposed ~~to~~ to do now. No money to replace the lost foods and just keep increasing more and more. Something got to give. Inflation is killing us off and gets not getting better. Winter coming high electric bills. I froze last year. And still couldn't pay my bill.

Carmen Williams
Indianapolis, Indiana

IURC Cause No. 46258

with regards to AES claiming they "need" to raise customer rates I provide following points to consider for rejection of their request.

- As a former voting shareholder of the garbage stock in AES, the executives can stop asking for a yearly raise. AES executives are doing very little to justify a pay raise while paying less than $0.18 a share per quarter in dividends.

- They don't engage owner's of Apartment complexes. Instead they constantly barrage renters to make changes to reduce consumer usage.

- Unintentional participation in Stock Manipulation, which is a Felony. Enphase is an American (California) based manufacturer of solar cells. AES has willfully allowed the orange blob in the White House to attack solar energy ~~useage~~ usage.

- They preach about smart thermostats, yet ignore the existence of window tint that will reduce the impact of sunlight and high UV levels. A concept that could be applied across residents, business, churches/religious buildings, hospitals, and government.

- They have 2.7 million customers. Share the cost evenly

Re: AES Rate Increase Requsts

I am strongly against this increase. With inflation, high food costs, housing and taxes, this much of an AES increase is toomuch.

Electricity is something we cannot do without. AES is my only power source. I cannot shop around for better rates.

Therefore I ask the Indiana Regulatory Commission to approve a much lower rate increase if any.

Please give this your consideration before your final decision next spring.

Sincerely,
Shirley A. Boyd

RE: Utility Rate Increase

I am writing to oppose the increase that is being considered. I feel that this would put a burden on elderly people living on Social Security payments. With the cost of food, gas and everything else going up, it will be a real hardship to manage an increase in our utility bills.

We, as elderly people, are trying hard to keep our bills paid and keep our usage of electricity low. We do not run our air conditioner lower than 75 and keep the lights off as long as possible.

If an increase is necessary, I hope you will take into consideration that many elderly people are living on social security only and don't get an increase in earnings every year. This increase should not be imposed on elderly people over the age of 70.

I would appreciate a response to this letter. You can mail a reply to the address above, send an email to g.clouse6420@comcast.net or send a text or phone call to 317-509-2778.

Gerald Clouse

Gentlemen:

Under "No" circumstances are you to "O.K." the latest rate increase to AES! It is out of the ??! We should "NOT" have to beg you for rate increases that render our budgets, cause for utility cut-offs, etc. (excessive bills)

Over the years you have always granted these utility increases for electricity, gas + water this time you are to Vote "No"! You have a boss and we will contact them or "Him". Maybe this Council should have new leadership and members!

Rosalind Coleman

P.S. - Recently I've had my EAP benefits messed up by AES, after "No" resolution in ~~Easter~~ Easter. WAKE-UP we are not going away!

RE: AES rate increase ~~=~~ 46258

This rate increase is unconscionable given their financials and the financials of similar electric utilities. Some of this rate increase will, by definition end up in the pockets of the shareholders. Please see the information enclosed; AES dividend yield as of 8/12/25 is 5.5 %. Note that this is 38% higher than Duke and 40.5% higher than Con Ed. What do these companies know that AES does not? Plus CD's are paying on average 4.5% and the average dividend for an electric utility is 2.62%. therefore, AES's dividend is more than double the average dividend for an electric utility. And the average for all S&P 500 companies is only 1.21% dividend yield. Since this is a monopoly, we get a say in the rate increase however as a publicly traded company we have no say in the dividend paid by AES. Like I said some of this rate increase will end up in the pockets of the shareholders with no benefit to the rate payers. If they need money for infrastructure take it out of the dividend and not on the backs of the ratepayers.

Kind Regards

David Dessauer

August 20, 2025

Good morning,

I am writing this letter because of the projected increase of $21 to all homeowners and renters of AES IN monthly energy usage.

I am opposed to the homeowners and renters AES IN electric bills increasing. I sent an email yesterday with all that I have done to make my house more energy efficient. Last month's electric bill was $88.05, and I do not ever use my air conditioning. It was hot outside, but it was also hot in my house with 80-85 degrees on my thermostat the entire month. I think the bill was ridiculously high for me being hot, and in a hot house.

This letter is being written to propose an idea for AES IN to find a different way to raise electricity rates. I am a resident of Lawrence, and I have Lawrence Utilities for water and sewage. There is a baseline rate for usage. When water usage goes above the base level, then there is a higher charge for that usage.

AES IN could charge a baseline rate for kilowatt usage. One set of standards for homeowners and renters. Have a second set of standards for everyone else. Keep usage rates current or perhaps lower the rates slightly. All of this is known as a progressive pricing policy. Employ tiered rates for electricity usage. The cost per kilowatt-hour (kWh) changes as consumption increases.

Very Respectfully,

Ms. Patricia A Waite

7551 Pennycroft Dr.

46236

To the Utility Consumer Counselor:

My name is Cherryl Mayfield. I do not believe that AES should receive a rate hike increase from the Consumes. They just got approve for one last year. Most people are struggling already with the rates that are current right now. With prices going up on everything right now people are struggling to survive. I try to keep the usage of electricity at a minimum. I read that that21,000 customers have been disconnected and 43,000 were reported in collection agencies for being delinquent. The numbers will get worse if AES gets the rate increase gets approved. The company does not care about the consumers all they care is about profit. I have s suggestion. During the pandemic, the CEO for the company that I work for went without a salary for 2 years to help out the company. Why doesn't the CEO of AES do the same thing and there a lot of companies are downsizing to save money. AES should do the same thing. I wish you could request independent audit to actually see where the money that the receive is going to. Please when you make your decision think about the consumer and how it is going to infect them instead of big business.

Thank you

Cherryl Mayfield

OUCC Consumer Services,

I live with my daughter Shawn Israel at the address listed above. I am writing in response to the AES rate hike. As a Indiana resident, I am already overwhelmed with how much the monthly cost of Utilities are. Honestly, I am surprised that we are being asked for more money when we are already stretched to the limit.

Over the last few years we have suffered several Power outages in our neighborhood due to weather conditions or transformer issues We have thrown out food in the refrigerator and freezer on several occasions due to Power outages and it was absolutely a hardship We also had to leave home and stay elsewhere for several days because the house was simply too hot to stay in without electricity.

I am a senior citizen on Social Security, I do not own a generator and cannot afford to purchase one in order to safely stay at home when there is a power outage. I contribute a few dollars, whatever I can afford to go toward household expenses each month. The price of everday living

IURC CAUSE # 46258 Aug 24, 2025

DEAR SIR

My NAME is DAVID Q. HARWELL, JR I Reside At 2736 N. RURAL INDIANAPOLIS IN 46218

I'M ON A fixed Social Security income AND I personally CAN't AFford another rate increase A.E.S. has APPROved Several Rate increases in the past, And they have been to DRAMATIC for me. AES has earned not Millions, but billions in Since they took over INDIANAPOLIS Power + Light This needs to stop and Stop Now. I'm speaking for All Seniors who collect only Social Security / DISABILITY. OR you will See more DISCONNECTIONS in future And that will be a disgrace to the Hoosier Community.

Thank You
David Q Harwell

P.S. CAUSE # 46258

Dear Office of Utility Consumer Counselor,

I am writing in response to AES requesting another rate increase. I just received my electric bill today for July for $265. Living in my home for over 30 years, I have never received a bill this high. (1600 sq. ft home)

Please speak for the consumers of Indiana and vote "no" to this requested increase. We cannot afford to pay one cent more.

Thankyou,
Nancy Staveoft

Regarding IURC Cause No, 46258, AES Rates

From Warren Gerbig
Indianapolis, 46214

Regarding AES' request for a rate increase for January 2026

My Social Security income only went up 2.5% for 2025
Whereas My Medicare went up 5% for 2025
My Medicare Supplement went up 7.7% for 2025
My Part D, Drug coverage went up 20% for 2025
My Auto Insurnace went up 20% for 2025
My Homeowners Insurance went up 25% for 2025
My Citizens Utility rate went up 3.5% for 2025
My groceries seem to go up at lease 10% a year

The United States Federal Government reports that inflation for 2025 is only 2.7%

Therefore; if AES wants a rate increase starting January 2026, they Should only get what the inflation rate is 2.5% and not +6% it is seeking

AES' request for a +6% rate increase for 2027 should only be what The Federal Government's reported inflation rate for 2026

Indiana Utility Regulatory Commission Public Field Hearing

I strongly Appose This rate Increase That AES is seeking. To think That a utility company is Asking For a double digit Increase is Appalling. IF I remember correctly, The last Increase They asked For was 8.4%, This commision gave Them 4.8%, don't qoute me on This but It is in The ball park.
That Being the case, They now Are asking For 13.5%, Now IF Things go The way AES wants, They will get At least half of what They want.
I believe They go high on what They submit to you, The commission, in hope's They will get half of what they are really seeking.
AES Knows That 13.5% is probably not going To happen, so They would be happy with 6 or 7%. This is still to much.
I do relize That Everything cost more, but what They want is way over The Inflation rate. At best, They should only get no more of An Increase Than what

The Inflation rate is, which is more Than They deserve being That Their service is not up To par. Messed up bills, power outAge's are commen, can't speak with Anyone in person. My wife and I are retired and we just can't afford this encrease, If we get an Increase on our SSI, It's at Inflation rate, does not really help That much, So in closing I hope That you listen To The citizens of Indpls. and The customers of AES and Take into consideration our voice's to appose This Increase, like I said earlyier, They go high For The Increase, in hope's of getting half of what They are asking, which is still To much, maybe They should only get what The Inflation rate is or at best no Increase at All

Thank You

Last month I paid an aes bill that totaled $172.00+. That alone was ridiculous from the $138.00 the month before.

In the years my thermostat was set at 68°. This year it was set at 72°. After receiving the bill for $172.00, it is now set at 75°.

When I read the flyer that came with my last bill and saw what they were wanting to increase the rate by 13.5%. This floored me! Especially when a few years ago, they were charging their customers $17.00 a month just to be a CUSTOMER! REALLY?

Seniors like me, on fixed budget can't afford this increase!

Thank you in advance for your time!

Sincerely,

Susie Knight

to live. But this year every thing is crazy money to go anywhere else. Lot Rent goes up every year, water & Swer, Insurance, Food, meds, co pay for doctors, And God help you if you have to go into a hospital, Propety taxes. The way things are going I don't know if I'm even going to be able to stay here. And Social Security doesn't give enough in our rais once year to cover all the hikes on bills that go up. Do to all the changes and cuts this year I am not able to get any help with ~~anything~~ anything. I've tried. AES has already had one increase oked not to long ago and my budget was raised again at that time. It makes fer (I'm and others are being Penalized because we are poor or low income. Every thing that is going on this year is doing nothing but killing the poor and the rich are getting richer. I know I'm one of one person others out there have families God be with all of us that have to make up weather to pay bills or eat. Why is this happening to us. Isn't there enough crazy stuff going on in this

world this year? All the fighting, killings And robbery's going on now As it is. And its not going to stop with every thing going up. All Im tring to do is fight to survive till God takes me home. Im not married And cant get Any help do to All the chages And cuts And hikes. I have to go to some places to pay my bills And the one's that I cant do that with have to pay for A money order & Stamps Are ever higher. I can't have A bank Account Anywhere. I don't have enough coming in every month to keep A fixed amount in the Account And then there fees for having the Account And pay for checks to boot. I can't Afford internet. And I'll tell the truth on the internet I have no clue on even how to use it if I did. Everytime you turn around someone or some company has been hacked. I will give you guys credit for At least giving us people A chance to speake up. I Pray you here us And don't let this AES hike go down...

over =>

Cause No. 46258
Attachment ALB-7
Page 93 of 7300

If you guys could listen to the people and take the step to block this hike. Just may be other companies will follow and listin to the people. Or find away to get us who need help Approved. I've tried every thing to get help. But no will cause I have $34.00 dollars a month to much coming in. It's just crazy cause they rais there amount also. So I pray you won't let this hike go down. They already had one not long ago. Give us a chance to survive please. I do want to say Thank you for giving the people a chane to be in this. Thank you for reading my letter. I do pray you hear us and stop this hike again. Please give us a chance to Survive. Why do we need 30.00 more a month Add to our bill when they already had one not long ago.

Please Say No To Hike
ON AES
Thank You for your time
Betty J. Edeley

Re: IURC Cause No. 46258 – AES Indiana Proposed Rate Increase
Submitted by: Bates-Hendricks Neighborhood Association
Reference: IURC Cause No. 46258
Date: August 30, 2025

The Bates-Hendricks Neighborhood Association (BHNA), represents neighbors in one of Indianapolis's historic neighborhoods on the near southside, bound roughly by Interstate 70 to the north, Interstate 65 to the east, the train tracks south of E. Beecher Street to the south, and Madison Ave. to the west. We strongly oppose the rate increase requested by AES Indiana in Cause No. 46258 and respectfully ask the Indiana Utility Regulatory Commission (IURC) to reject the request.

1. **The proposed rate hike is unaffordable for our neighbors**

AES Indiana's request amounts to an estimated **13.5% increase** to residential bills—approximately **$21 more per month** for a household using 1,000 kWh by January 2027. Local advocacy groups such as Citizens Action Coalition (CAC) report the total increase may in fact amount to **$30 per month** or more when projected to 2027 when combined with other already approved increases.

These increases are not sustainable. Nearly **half of AES customers** in Indianapolis have already received disconnection notices in 2025. How high would that number grow with another $30 added to their bills?

Bates-Hendricks is historically a working class neighborhood with many longtime neighbors living on low- and fixed-incomes. According to Census Reporter, nearly 10% of our neighbors living east of East Street have household incomes below the federal poverty line while more than 30% of our neighbors living west of East Street have household incomes below the federal poverty line. That's nearly double the county-wide average. Many of our Bates-Hendricks neighbors are one missed paycheck away from service disruption—a condition that directly undermines health, safety, and quality of life. **Electricity service is a basic need for living safely and securely.** Families shouldn't have to choose between paying the electric bill and putting food on the table.

Indiana's Five Pillars for energy policy, established by HEA 1007 from 2023, requires that **Indiana electric ratemaking decisions must consider affordability**. Please take that charge seriously when considering this proposed rate increase. If approved as requested in full, the resulting higher electric bills would be simply unaffordable for our most vulnerable neighbors.

2. **Reliability Concerns and Regular Outages in Bates-Hendricks**

AES cites rising operational costs—storm response, vegetation management, modernization—as primary reasons behind the request. Yet residents in Bates-Hendricks experience **frequent local power outages** that contradict claims of improved service reliability.

Neighbors routinely report power outages, sometimes brief in duration but often lasting several hours. **These blackouts interrupt remote work and education, damage household appliances, and leave vulnerable residents—including seniors and those dependent on medical equipment—at risk.** Outages also impose hidden costs: spoiled food, lost wages, and the need for costly backup solutions like generators or battery packs.

Just last month, in July 2025, half our neighborhood lost power for more than 12 hours on a day when temperatures soared to more than 90 degrees with high humidity. This created dangerous conditions for many of our more vulnerable neighbors. And, adding insult to injury, tree limbs that were cut down as part of the effort to repair local grid infrastructure were left piled in the alley south of Lincoln Street for weeks, making the right of way difficult to navigate until neighbors paid to have them cleaned up.

It is fundamentally unjust to ask our community to pay more for service that is unreliable. AES should first demonstrate clear, measurable improvements in reliability in neighborhoods like Bates-Hendricks before being allowed to shift additional costs onto customers.

3. **Disproportionate Impact of Rate Design**

AES proposes both an increase in fixed monthly charge from **$17 to $20** (+18%) and across-the-board per-kWh energy charge hikes. This regressive rate design disproportionately burdens low-use households—particularly low-income renters and seniors—who cannot reduce their minimal usage any further.

Further, **the declining-block rate structure penalizes energy efficiency, conservation efforts, and the several households in our neighborhood that have invested in rooftop solar energy**. This rate structure, which charges low-usage customers more, contradicts broader environmental and equity aims.

Finally, **the requested rate increase shifts disproportionate costs onto residential customers, forcing our neighbors to subsidize the electric bills of large corporate customers like data centers.** According to Citizens Action Coalition, "AES is proposing the largest rate increase (13.45%) for residential customers, with much smaller rate increases proposed for businesses, including a 6.18% increase for small commercial customers, a 8.72% increase for medium commercial, and a 2.5% increase for large industrial customers (which includes big factories and data centers)." It's unfair for our neighbors already struggling to make ends meet are going to be asked to subsidize energy costs for some of the largest and most profitable companies in the world.

4. **Rising Profit Margins Amid Consumer Strain**

A significant chunk of the new revenue AES Indiana is requesting to collect from customers each year will simply go to padding already robust corporate profits. AES Indiana already has the highest approved return on equity among Indiana's five investor-owned utilities at 9.9%. Seeking to increase that approved rate to 10.7% will result in tens of millions of dollars in increased revenue requirement at no additional benefit to customers. Meanwhile, programs that help our neighbors struggling with hardships—like LIHEAP—face federally driven funding cuts.

It is deeply concerning when regulated utilities seek rate hikes that seem to be primarily motivated by growing shareholder profits, while affordability and consumer protections continue to erode.

5. **Conclusion**

For neighbors in Bates-Hendricks, electricity is not optional—it is essential. Access to reliable and affordable service is at risk due to the affordability crisis driven by skyrocketing bills and the ongoing problem of local outages. We join with neighbors across the city in urging the Indiana Utility Regulatory Commission to reconsider AES's proposal.

Please reject the requested rate increase in Cause No. 46258, and insist on protections that center affordability, fairness, and reliable essential service.

Thank you for considering our neighborhood's concerns.

Respectfully submitted,

Zach Schalk
Vice President, Bates-Hendricks Neighborhood Association
Vicepresident@bateshendricks.org

Subject: Formal Complaint and Opposition to Proposed AES Indiana Utility Rate Increase

Dear Commissioners:

I am writing to you as a concerned citizen, customer of AES Indiana (formerly Indianapolis Power & Light), and member of the Indianapolis community, to formally express my opposition to the proposed utility rate increase recently filed by AES. This proposed increase—occurring during a a time of ongoing economic hardship for many households—places an undue and unjustifiable financial burden on customers who are already struggling to meet basic living expenses. Many Hoosiers are still recovering from the economic aftermath of inflation, housing shortages, and rising healthcare costs. For AES to request a rate hike at this time reflects a disconnect from the realities facing the public they are entrusted to serve.

Lack of Justification: AES has not sufficiently demonstrated a public need for this rate increase. While AES claims the additional funds are necessary for infrastructure upgrades and operational sustainability, the details provided to consumers have been vague, lacking transparency and accountability. Customers deserve clear documentation of how these funds will be used and why existing revenues are insufficient.

Disproportionate Impact on Low-Income and Working-Class Families: Raising electric rates during the summer—when usage naturally spikes—will disproportionately harm low- and moderate-income residents, many of whom are already facing increased eviction rates and high energy burdens It risks exacerbating energy insecurity and pushing vulnerable families further into crisis.

Request for Regulatory Oversight and Denial: As a public utility, AES operates under a mandate to serve the public interest. I am urging the IURC to: Reject the current proposed rate increase until a full, independent audit can be conducted into AES's budgetary practices and claimed justifications. Mandate greater transparency from AES on how customer funds are allocated and how rate increases will impact diverse communities across the state. Require AES to present alternative funding proposals that do not rely on additional financial burdens to customers, such as cost reductions in executive compensation or redirecting non-essential capital expenditures. The role of the IURC is to act as a safeguard against exploitative practices. I trust you will uphold your responsibility and carefully scrutinize this rate case to protect the interests of Indiana residents.
Thank you for your time and for considering the needs of consumers.

Respectfully,

Jill Engel

RE: Price increase request from AES
DATE: August 21, 2025

Due to my age and health, I was unable to attend any of the public hearings regarding AES's request for a price increase.
Using the information, I received from AES in an information paper in my July bill I am estimating that in 2026 I will be paying an additional $20 per month for my electricity.
Adding on the increase of my monthly level billing from Citizens Energy that went from $116 to $152 beginning in July I am going to be paying an additional $56 for my gas, water and electricity.
At the present time I have a fixed income of approximately $2700 a month with expenses of approximately $1700 (this includes utilities, estimated state income tax, HOA assessments, insurance, medical coverage, etc.). That leaves me with approximately $1000 for food, gas, etc. I am certain that is more than many senior citizens have but I live from pension check to pension check. I used to be able to save money for extras like a need for new appliances, etc. but that is no longer a viable option. I know that my Medicare Part B will increase in 2026 from $185 to probably close to $200 or more.
I have a strong feeling that people like you and members of the IURC have no comprehension of what an extra $56 per month for my utilities means to people like me, but it means a lot.
I am requesting that IURC to not grant AES an increase in their rate increase request.

INDIANA UTILITY REGULATORY COMMISSION

Aug 25, 2025

IN Utility Regulatory Commission.

No! to this much rate increase. I write to defend our home against the tremendous rate increase AES is requesting. There information sheet made it sound like this was a done deal with no recourse but to accept it. And they made it sound like simple increases but it would be compounded into the future. Their calculations on how much the bills will be are so skud that it does not reflect the range of increase a person can expect and with the increase that happens if your bill exceeds certain watts it is even further out of proportion.

Our personal income is not increasing at this rate and the extra expenses and time we have experienced this past year because of their lack of attending to a tree limb issue makes their desire for a rate increase even more of a hardship on us. This rate is even greater than inflation.

Please say no to this much hardship on all the customers of this utility

Thank you & Nancy S Potts

COMMUNITY LETTER TO STOP THE AES INDIANA RATE HIKE

To Whom It May Concern,

We, the residents of Indiana and AES utility customers, are standing together in strong and urgent opposition to the proposed rate hike by AES Indiana. This increase would burden thousands of already struggling families across the state—particularly single mothers, seniors on fixed incomes, renters, and households with young children.

At a time when inflation has impacted the cost of living and wages have not kept up, the idea of increasing electricity rates by more than 30% is not just unreasonable—it's cruel. Many of us are barely managing to get by as it is. An increase of this magnitude, right before the winter season, would be catastrophic.

Raising rates now would directly lead to Hoosiers losing power, losing heat, and potentially being placed in life-threatening situations. For families with children, for elderly citizens, and for low-income individuals, this decision could mean being forced to choose between heat, food, or rent.

We are also deeply concerned by the ongoing billing chaos created by AES Indiana's recent system overhaul. Residents across the state have experienced: - Multiple conflicting account balances (phone, website, third-party payments). - EPA assistance payments not applied properly. - Late fees and inflated charges despite timely payments.

These are not isolated incidents. They are widespread, ongoing, and have gone unresolved for months. Customers are confused, frustrated, and feel cheated—because we are. This level of dysfunction in AES's billing system should be the subject of a full investigation. We believe AES Indiana's internal systems must be fully audited to uncover where these mistakes began and why they remain uncorrected.

It is unacceptable for AES Indiana to ask for more money when they haven't even fixed their own accounting and billing errors. They have not earned the public's trust, and they should not be allowed to pass the cost of their mismanagement onto everyday people.

We are calling on the IURC and the OUCC to do the right thing: - DENY the rate increase request in Cause #46045. - ORDER a full public audit of AES Indiana's billing systems. - Require AES to FIX existing billing errors and credit affected residents before any discussion of higher rates.

This is a matter of fairness, decency, and human dignity. Our voices matter. Our lives matter. We will not be silent while a private utility company profits off the chaos they created.

Sincerely,
Concerned Residents and AES Indiana Customers

AES isn't a public utility company, it's a major corporation. It's CEO's base salary is $13,355,284 with a stock of $9,368,565 (in 2023). And the company wants a raise!! No person is worth that kind of money.

Consummers don't have a choice so they (AES) are a monopoly!

I'm in my mid 80's & on a fixed income. In the 20 years I've been on Social Security I have had ONE raise. There were a couple that amounted to $1.00 for the year. TY (OVER)

You may continue your comments on the back of this sheet or attach them.

Hello,
According to the attached ALICE report, with statistics dating back to 2023, Indianapolis families are in no position to have an AES rate increase on top of childcare costs, health and care insurance, and numerous other bills. It is no secret that prices have been rising, but our pay is not. Please have the communities back on this matter! It will save a lot of suffering.
Thank you very much,
Vivien

Utilities: AES IURC Cause No. 46258
Type of Inquiry: Case Comment
Comments: To Whom It May Concern,

I am writing to formally address the proposed massive utility rate increase by AES. As the owner of a large senior community where utilities are included in the rent, I am deeply concerned about the significant impact this rate hike will have on our tenants and our ability to sustain affordable living.

Our community is composed of senior citizens, many of whom rely on social security as their primary source of income. The proposed increase in utility rates, based on AES's request, will place an overwhelming financial burden on both our operations and our tenants. Currently, most of our tenants live on the modest amount left from their social security checks after paying rent. With the added cost of higher utilities, many of our seniors will no longer be able to afford their rent and will face eviction. This could result in the displacement of a vulnerable group, many of whom are veterans who have sacrificed so much for this country.

Furthermore, it is worth noting that we have experienced serious billing issues with AES in the past, which have only exacerbated the challenges we face in maintaining affordable housing. The prospect of a significant utility rate hike, given the history of billing errors and inefficiencies, is deeply troubling.

We implore you to reconsider this rate increase. It is an avoidable and unfortunate situation that could have a devastating effect on the well-being of our elderly residents. Raising utility rates to these levels would unfairly penalize our seniors, many of whom are already struggling to make ends meet. We urge you to find a solution that will allow our community to continue providing affordable housing to those who need it most, without forcing them into financial hardship or eviction.

Thank you for your time and attention to this matter. We hope you will take into consideration the far-reaching consequences this rate increase will have on some of the most vulnerable members of our society.

Utilities: AES
Type of Inquiry: Case Comment
Comments: Reference Cause No. 46258:
Hello..
I am a resident of Indianapolis, Wayne Township, Marion County, Indiana. It has been brought to my attention that AES is petitioning you AGAIN to raise our electricity rates AGAIN by 20%. This is absolutely ridiculous at such an excelerated rate. I understand that there is a cost for upgrading our archaic systems to be more efficient, but where is the need for residential electricty when your residents are being impacted at a level that just cannot be met. AES is choking the residents of Marion County with their constant need to raise their rates "AGAIN", when we all are still acclimating to the rate increase they just imposed on us.
I, myself, live alone on a fixed income due to disability. TRUST ME when I say, I have tried over and over again to get back to the workplace so that my life is not minimal and stretched, but after numerous failed attempts I had to relent to my health issues. The stress that I feel every month waiting for my AES bill to pop up in my email is impacting. Will I be able to afford food this month, gas in my car, will I be able to stay warm, or cooled off while temperatures are at critical heat levels as they are this week? I keep my heat at 67 degrees in the winter and wear coats, scarves, etc.. In the summer my AC is set at 76 or higher, and I keep my home darker and use a small fan to push the air around. TRUST ME I am doing everything I can to keep my bill down. I was gone the majority of this last billing cycle and my bill came just today. $70.16!!! WHY!? I've barely been here. The month before it was $39.42. Something is not balancing out.
I propose that you, the Indiana Utility Regulatory Commission, deny the AES Petition and advise them to come back at a later date, like... 2-3 years from now. Maybe the economy will balance out and the residents of the State of Indiana will be more financially stablized, and maybe not, but at least we will have been given a gap to recover from their last increase. Maybe it doesn't seem like much to some, but for a single mother trying to ride the E in her gas tank until payday, or to get a gallon of milk and a loaf of bread to feed her children, or someone like me that is riding a thin line of survival at the end of the month due to paying bills and covering the necessities of life on a fixed income, $9 is a lot of money, even in this economy.
Please consider what the residents are conveying to you. After all, you too are a resident of the State of Indiana, are you not?

Respectfully,
Tracy E Gelenius

From: tyler.s.cason@gmail.com
To: UCC Consumer Info
Subject: tyler cason - AES Rates
Date: Monday, August 11, 2025 11:17:01 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Good Evening,

My name is Tyler Cason, from Indianapolis, 46227, in reference to IURC Cause No. 46258. I live on the southside of Indianapolis and I am writing regarding the proposed rate increases by AES.

The current rate increases will expand the burden on working-class and impoverished families, who are already feeling the pinch of each dollar they work so hard to obtain. The messaging so far has been that this funding will be vital to the continued investment in improved infrastructure to our grid, access to reliable energy, and continued service at a reasonable cost. While I am a supporter of investment in a sound energy infrastructure, I have a couple of concerns that, I think, are at the heart of my and others' concerns:

1) There needs to be a far greater investment in the improvement of home energy efficiency, with funding directly invested into home energy audits, improvements that increase efficiency of home energy usage, and incentives for further individual home energy investments. The fact that Indiana does not provide a subsidy to families that are willing to invest in solar power for their homes, nor the grid impact to a surplus of energy, is a blatant disregard to the potential of actual renewable energy resources available to most individuals in the state. It also creates a negative impact to attracting new residents from states that offer these incentives, and ultimately empowers energy companies - like AES - to continue to monopolize a product that is essential for basic human needs.

2) There needs to be, at a minimum, much greater transparency in how each dollar of tax payer money is allocated throughout the organization. Every dime that comes from hard working citizens should be accounted for and publicly posted regularly, and a system of accountability installed to ensure that any funding provided for services is well allocated so that there is a minimization of fraud, waste, and abuse. Citizens want to trust that their dollars are being put to good use, but will never trust the systems in place without being able to see behind the curtain. AES wants to "invest" in infrastructure, fine; do that with every cent being accounted for in a transparent and reasonable way. We need a solid grid, and we need sound investment in the future of Indiana power, but not at the expense of retention of our population when it could be easily resolved with honesty and transparency. Especially, not at the expense of the livelihood of those relying on its reliable support now.

I hope this gets through to those at the helm of advocacy and decision-making. We have a responsibility to take care of one another, and it takes just a little effort to do so. Please do what is right, not just for the betterment of one company but for all those who rely so heavily on the service we pay dearly for.

Respectfully,

Tyler Cason

From: Tonto500 Tonto500

Subject: Tonto500 Tonto500 - AES Rate Increase Request
Date: Monday, August 18, 2025 7:58:20 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Requested Information:

Jacques Fuqua, current AES customer in good standing, submitting a response on behalf of our family
Location: Indianapolis, IN 46214
E-mail: jlfuquajr@gmail.com
Utility's Name: AES
Cause No. 46258

I write to share my concerns on the AES rate increase request.

The current request for a 13.5% rate increase follows a 2024 rate increase approval of 7.2%, the expressed purpose of which was to "strengthen the electrical grid, enhance customer offerings, improve service reliability, and increase vegetation management."

Now, one year later, AES officials are again requesting an increase, only this time nearly twice as large as last year's request. The cited purpose of the 2025 request is to improve grid reliability (sounds reminiscent of the 2024 argument); increase sustainability and energy transition (don't current monthly charges provide for enough profit to invest in future infrastructure projects?); and fend off the impact of rising costs (I would argue that most Americans are feeling the pinch of inflation, yet must manage their dwindling household resources to remain within budget.) And, AES requests will not stop here.

The current request is further buttressed by "rate trackers" that help AES offset other variable costs, some of which will be included in the base rate, while others won't be requested until *after* approval of the requested rate increase—something akin to a blank check. As a result, customers won't even know the full cost of the requested rate hike if and when approved.

At what point are AES officials to be held accountable for increasing efficiency, producing results, and achieving some economies of scale? They don't have an inherent right to treat customers as corporate debit cards. The operative term in upper "management" is "manage", i.e., managing scarce resources to accomplish objectives, goals, and their associated priorities. It is well past time for AES leadership to become acquainted with this concept.

Respectfully,

JL Fuqua

From: Adam Hein

Subject: Adam Hein - AES Indiana regulatory rate review
Date: Thursday, June 12, 2025 11:47:57 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

These rate increases need to stop, they've occurred year after year. I believe they're taking advantage of consumers. They state tree trimming costs has risen 185% since 2022, I think the re-bid process of the contract should be examined. As well as review/investigate rate hikes since COVID, they've done multiple citing improving infrastructure, approved projects, etc. Within a 12 month period (if I'm reading the email correctly), we'll see 3 rate hikes; 6%, 6.5% and 7%. Our electric bill is already over $100 monthly even when not using our heat/HVAC. This is wrong and our residents deserve better.

-Adam Hein

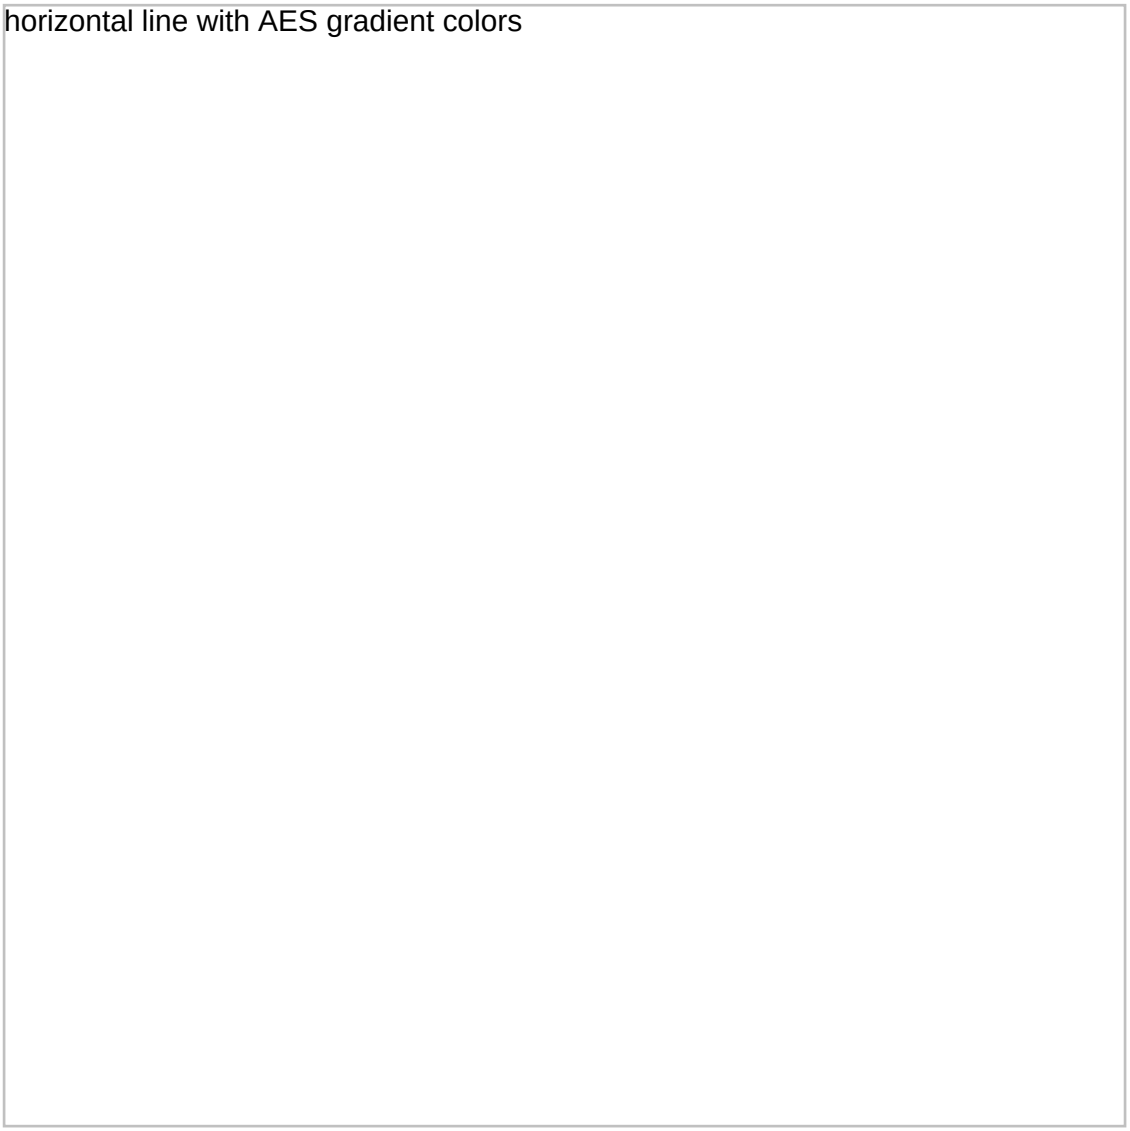
AES Indiana is planning for a more resilient future



Dear AES Indiana customer,

For over a century, AES Indiana has proudly delivered safe, reliable, and affordable electric service to homes and businesses throughout Central Indiana. Today, we're planning for a future that continues to meet the evolving needs of our more than 530,000 customers while accelerating the energy transition to cleaner and more efficient energy solutions. AES Indiana has filed a Regulatory Rate Review with the Indiana Utility Regulatory Commission (IURC) to ensure we can continue delivering the safe, reliable electric service you count on while preparing for the future.

Why did AES Indiana file a rate review?
We're making important investments to better serve you, including:

- More reliable service during storms and extreme weather
- Stronger infrastructure to reduce outages and speed up restoration
- Addressing rising costs for materials, labor, and maintenance like trimming trees away from our power lines and storm response

Just like many businesses, our costs have gone up, and this allows us to continue delivering the value and service you expect and deserve. For example, from 2022 to 2025, the costs to trim one mile of trees away from our power lines has increased by 185%.

What does this mean for your bill?
If AES Indiana's request is approved by the IURC, a residential customer using 1,000 kWh per month will see an increase of about 13.5% - or up to $21 - in two phases:

- Up to 7.5% in Q2 of 2026 and
- Up to 6% in January 2027

In addition to this requested rate review, AES Indiana customers will see a 6% bill increase in 2026 compared to bills in 2025 due to approved projects, such as the Pike County Battery Energy Storage Solution, Petersburg Energy Center and grid improvements forecasted to be complete through 2026.

AES Indiana is here to help you take control of your energy use and your bill. Use our bill calculator to estimate the impact based on your electricity use and find more information about ways to save energy and money on our website.

Stay Informed

1. Bookmark our dedicated rate review webpage and check back for updates
2. Follow us on our social media channels on Facebook, X, Instagram, and LinkedIn
3. Make sure your contact information in your online account is updated

Thank you for being an AES Indiana customer. We're committed to reliably powering your home and supporting the growth of our community – now and for years to come.

Hi! My name is Addison Springer and I live in Indianapolis, zip code 46202. I'm employed full time and making a little over $21/hr.

I have recently had to finance my energy bill with AES Indiana, despite sharing a studio apartment with my employed partner due to the frequency in which AES has increased my bill and the lack of communication for several month from Sptember 2023 to November 2024. I've paid over $700 in the last two months to keep my lights on, and even lost time at work due to AES shutting my power off.

With the rising cost of everything, I understand that energy isn't free, but these are costs AES has been managing just fine before 2023, even during COVID.

It makes no sense to me, as a born and raised Hoosier, why the cost is being extended to our citizens, when it's companies that have greater leeway with money -- unless it's simply a matter of corporate greed with no governmental control.

I'm just trying to make sure my lights are on, my rent is paid, and my stomach is full on a blue collar wage. Please don't make that harder for me and so many other hard working Hoosiers.

Thank you for your attention to this,

Addison Springer.

Hello,

My name is Naomi and I live in Marion County. I'm an AES customer who is truly concerned about the price increase proposed by AES. Are the everyday Americans not already taking it on the chin from the increases we're already buckling under. Not only am I consider what this increase will mean for me a person who still works, but also what it means for my mother and other retirees. So many of them are just getting by.as is. Yet, AES is asking for an increase for what, to give price cuts to large corporations. Please vote no.

Very respectful,
Naomi

I was in attendance at the last public hearing on this matter (08/27). I want to comment on what I heard from the speakers. It is stressful, and it's frustrating to work 40 to 60 hours a week to only come up short on meeting one's financial obligations. I listened as some described what energy cost savings measures they use in their homes every day. Collectively they said that those measures are not cutting their electricity bills.
I have personally been using a budget for my expenses since President Ronald Reagan, when "Reganomics" was a thing. I've cut back, used coupons, and shopped sales. I've used everything available to me to cut my costs for decades and yet somehow continue to not cut back on quality.
Why do I and the other customers of AES have to pay more only to get less? If the many households in this city can find ways to cut costs, to stretch their incomes, why can't AES? BUDGET. BUDGET. BUDGET! AES should budget their resources more carefully. The corporations that use the most electricity should pay more. It is only appropriate. It is only ethical.

Thank you for hearing me,
Mary Rita Gaines

The following is my public comment regarding the AES rate increase. Please note I am a resident of Indianapolis, IN (Marion County 46201)

We have solar panels—so why does our AES bill keep climbing like we're secretly running a data center for NASA? Under IPL, our monthly bill sat comfortably around $60–$80. Now with AES? We're getting slapped with $280–$390. Last time I checked, I wasn't cooling a server farm out of my front room.

And this is the second rate hike in just two years. For what? Not better service. Not cleaner energy. Just higher bills. But sure, it all adds up when your CEO is pocketing $13,355,284 a year. That money doesn't grow on trees. It's squeezed out of customers who have nowhere else to go.

Because here's the kicker, monopolies are supposed to be illegal. Yet somehow, AES has the market locked up tighter than Fort Knox. No competition. No choice. Just a big corporate shrug and an even bigger bill.

We're not paying for power, we're funding executive yachts, investor dividends, and a system that pretends it's regulated while fleecing the very people it's supposed to serve.

Make it make sense. Or better yet how about overhaul the system? Please give us as consumers, who already have no choice in the company that provides electricity, some reprive. Vote with your constituents in mind. Not the billionaires who give no thought to whether or not a family will have to choose between medications or electricity this month. Vote No!

-Aimee Mathis, an actual consumer not a billionaire

Hello, my name is Alicia D Howell. I live at 7309 E 38th St, Indianapolis IN 46226, cell number 317-473-4702.
I am against the proposed AES rate increase filed with IURC on 6/3/2025.
Please hold those town halls for consumers to voice their opinions like in the past. Last time AES filed a rate increase, your office held meetings for customers and heard our voices and did not grant AES their proposed rate increase but granted them a fair rate increase. Please accept this as my complaint. Thank you.

---Case Description: The proposed AES rate increase in 2 parts, I am asking the IURC to deny their request for a rate increase. AES just increased rates about a year and half ago, after much public outcry, IURC held town halls and let customers express their concerns over that rate increase and victoriously, IURC heard us and did not allow their full rate increase request. Please hold those town halls asap and let folks express their concerns again to help IURC make a fair decision for both the customers and AES.

Type of Inquiry: Case Comment
Comments: AES just received adjusted rate increases last year. They cannot claim that tariffs are increasing their prices, because the fuel they use to generate electricity is, and should be produced within the United States.
AES already tries to double-dip where they can. During the fraught period just after the Russian invasion of peaceful Ukraine, the price of fossil fuels went up and AES slapped a fuel surcharge on all its customers, including those who were paying extra to use only US renewable energy. The "green" customers who bought wind power from AES were thus charged for the fossil fuels other customers were using rather than just paying (extra) for the renewable US resources AES insisted they were getting delivered to their homes.
Furthermore, the AES President and CEO is being paid over 13 million dollars a year. The rest of the top executives are all pulling in 3+ million dollars. Instead of pulling money out of the pockets of Indiana customers, some of which are already in straightened circumstances maybe a bit of radical belt-tightening in the C-suite would enable the company to stay solvent. Especially Mr Gluski, who earns four times as much as the other top executives, needs to get a cut and his taking a truly significant one would most certainly demonstrate any financial issues in the company that might justify a rate increase in the coming year. Until such time, no rate increases should be approved.

Case Description: IURC Cause No. 46258

Please do not allow AES to allow a rate increase. Hooisers are already stretched thin, as it is, with inflation, other hight costs of living and low wages, we already pay too much! I'm on budget billing and pay over $120 a month, which is a huge increase from previous years when my bills were only $80. Utility bills, including Citizens Energy, we are paying over $250 a month in bills. It's becoming ridiculous, especially with those on a fixed income. Not to mention, AES service is shoddy at best, and since being on their service, we've experienced many more power outages and longer fix times. Please do not allow them to raise these rates!!!

longer fix times. Please do not allow them to raise these rates!!!

Date: Tuesday, June 3, 2025 11:03:47 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Consumer Counselor,

I am writing to strongly oppose the proposed rate increases by AES Indiana, of which I am a current customer. As a Registered Nurse and proud dual career individual, I am deeply concerned about the financial strain these sharp increases would place on working citizens—especially those of us already juggling multiple jobs just to make ends meet.

I currently rent a home on the east side of Indianapolis, do not have children or dependents, and like many others in our community, I still find myself working two jobs to cover basic expenses. A sudden spike in utility costs would be not only destabilizing—it would be unjust.

As someone who also works in finance,
I understand that companies experience rising operational costs. However, responsible businesses manage those through strategic budgeting, improved efficiency, and cost-cutting measures—not by passing the burden directly to customers, especially in a city where alternative utility options are nonexistent. Monopoly-level control should come with a heightened responsibility to protect rather than exploit the public interest.

I urge the OUCC to consider the real, human impact of this proposal. Please advocate against the approval of AES's rate increases and for policies that hold our utility providers accountable to the communities they serve.

Sincerely,

Amber Steele

Type of Inquiry: Case Comment
Comments: Hello! Thank you for taking the time to read my comment regarding the AES Rate Increase. I understand AES is requesting a rate increase to subsidize a data center for large companies. It is my opinion that these large companies should be paying for their own utility usage. Further, the benefit to the community is short-lived while the data center is being built. Once it is built there is no further benefit to the community, and the citizens are left with the bill for companies that are making extra profits since they don't have to pay their own utilities. Thank you, again, and have a great day!

Dear Counselor Bill Fine,

Americans are struggling. The price of everything is going up! I am struggling to pay my bills. I live paycheck to paycheck. I am a teacher and my husband is a postal worker. We both work hard for our community, but the cost of living has made LIVING feel impossible. I haven't gotten a haircut in 2 years because every dollar I have goes to food, utilities, rent, debt, and childcare.

And I'm not the only one! Hard working people are doing their best and their best doesn't feel good enough. We are trying to keep our heads above water and then I see stuff like this that makes me wonder if there's even a point in trying to keep swimming.

How many more millions of dollars in profit does AES need? Please reject AES's request for higher ROE and please reduce their profit dramatically! I PROMISE you that customers need that money more than they do.

That money would sit in a CEO's bank account somewhere, untouched. Help citizens keep their money so we can buy our children toys and get haircuts.

Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Amy Pitzer

Comments: As a large company, it's important for you to remember and understand that the constant increase in fees will eventually lead to the general public have no way to fund their lives and therefore have no money to pay for utilities or any other necessity and/or luxury. We CANNOT afford this massive of a rate hike. Maybe consider less bonuses and profits rather than causing your consumer base to suffer, which will eventually go away if they can't afford to pay for your services. You have the choice here to be a GOOD company that actually cares about is consumers more than it cares about profits on top of profits year after year.

To whom it may concern,

As a father of (4) young kids, and a single income family, these proposed rate hikes put paying our light be further out of reach for MASSIVE amounts of AES customers. We are already on a payment plan every year just to get through the summer month, which average $400+ a month. Please do not approve these rate hikes, and encourage AES to look for other options.

Sincerely,

Andrew Horton

Comments: AES I have found them to be very non-transparent and not a trustworthy organization. Unfortunately during my employment at the Department of Defense I was a "Deer-in-Headlights" due to our new President who decided to end my employment right before my one year anniversary. I just got my home out foreclose only to be faced with more "hardship". This is included the a sorry unemployment payments in which I had to wait receive 3 to 4 months later (due to a "horse-and-buggy" personnel department via Department of Defense), Thank goodness for Congressman Carson's administration who helped to get the "ball rolling" . I had to end up taken out a loan that I am still paying on with a very low singled women income. The reason why I am mentioning all of this is because, during this time I seek the assistance of AES. I was in "between a hard place and a rock". Because I was fired based on our president's decision. This all happen right before "Thanksgiving" and after money was spent to try to enjoy family (had no idea I was going to be fired). It was a very cold winter during this time and I completed all the protocols request by AES to complete my application for assistance with EAP-John Bonner ("A...JOKE"). As I continued to follow up with AES Representatives during this "hardship" I continue to be told that everything is okay, I'm now on the AES partial payment program while my application is being processed via EAP. This was a "back and fourth" process up until March. "Lord and Behold," AES hit me with bill for over 1,000 dollars with a statement included EAP has denied your application due to lack of information provided (Another Deer in Headlights Moment"). This was the most "messiest crap" I ever experienced. After receiving this "God Awful Bill" AES from that point on, continued to threaten my well being by telling me by U.S. mail and email they were going to "Cut Me Off". I don't enjoy sending this type of information about myself but I hope I am a voice to stop fraudulent and unfair treatment by our government and service providers. People are losing homes , paying high mortgages, rent payments and continue to "Jump through hoops" to get the assistance that is not there. Also just to add, our medical care, medical insurance which people are falling through the cracks is also Joke along with the very high cost of food. I'm so tired of hearing the "privileged tell the hardworking American people " to go to the pantries". Sorry to say this, our country is going to hell, no trust, no values and very limit resources and support. Thanks for the opportunity to share.

Dear Counselor Bill Fine,

This is a crazy pattern that AES is asking for.

Besides below have you ever tried to call for new service? This process is the most stressful act I have to do. I own a few rental properties. I want to start service and call the business line. Only to be put on hold for 30 minutes. Then they say I am at the wrong department even though I dialed business line. I wait another 30 minutes. This has been going on for 2-3 years. And they want to increase cost to do business.

Can someone call or email me to discuss why we have to pay high costs plus have poor service.
317-902-9477

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Audrey Satterblom

Bonita L. Vardiman
Indianapolis, IN 46235
bfvardiman73@comcast.net
AES Indiana Customer
CAUSE NUMBER 46258

Good morning, my name is Ms. Vardiman. I am an AES Indiana customer. My comments concerning the AES Indiana rate increase is on behalf of myself, the current economy, and the United States Government' "Big Beautiful Bill".

I am a sixty-five-year-old black woman who receives a monthly social security disability check. Currently, I live on a fixed income. Although social security gives a one-time cost of living annual increase, it's not enough income to pay for annual utility increases. With the high cost of living, social security income is not increasing at the same rate to keep up with the everyday increasing living expenses such as, rent payments, mortgage payments, property taxes, homeowner's insurance, property upkeep, auto insurance, food, medical expenses, and etc. If the utilities companies continue to increase their bills annually, millions of people will not have the monies to pay for an electricity and heating bills. Indiana citizens will manage a major protest against continuous rising utility cost. Citizens will not continue to lay down on abusive business practices.

Not to mention, in 2019, AES mailed a "Utility Deposit Warning letter" to their customers saying that three disconnect notice in 12 months will warn a security deposit of one-sixth of the estimated annual charge on their bill. They are charging customers for receiving disconnect notices. This is an outrage! Why would a company mail such a letter to their customers, having full knowledge that people are having financial hardship with paying utility bills, rent payments, mortgage payments, food and etc. Personally, I think it should be a crime! I can only imagine how they will treat their customers if they are given a rate increase for 2026-2027.

Furthermore, with Donald Trump' Big Beautiful Bill, millions of people will no longer benefit from "Energy Assistant Programs" because the funds will not be available.

Donald Trump has taken all the monies that were used to fund assistance programs for low-income people who are experiencing financial hardships and has placed the responsibility on the State. The State of Indiana does not have the monies to fund all the programs needed for the poor and low-income. In addition, the people will not be allowed to depend on donors, sponsors, cooperations and organization for funding because the way the economy is transitioning, we are headed for a financial crisis! Increasing utilities bills right now will hurt the citizens in Indianapolis. It's interesting that AES did not take this into consideration when they jumped out to call for an electric increase for two years (2026-2027).

Food for thought: There is a wise saying, "You can squeeze, but you cannot get blood out of a turnup". The people will fold! They will learn how to live without electricity and heating companies! My parent did it! And the American people will learn how to do it as well because they will be forced too!

Thank you,

Ms. Bonita Vardiman

Indiana Utility Regulatory Commission
101 W. Washington Street, Suite 1500E

Indianapolis, IN 46204

Subject: Formal Complaint and Opposition to Proposed AES Indiana Utility Rate Increase

Dear Commissioners:

I am writing to you as a concerned citizen, customer of AES Indiana (formerly Indianapolis Power & Light), and member of the Indianapolis community, to formally express my opposition to the proposed utility rate increase recently filed by AES.

This proposed increase—occurring during a time of ongoing economic hardship for many households—places an undue and unjustifiable financial burden on customers who are already struggling to meet basic living expenses. Many Hoosiers are still recovering from the economic aftermath of inflation, housing shortages, and rising healthcare costs. For AES to request a rate hike at this time reflects a disconnect from the realities facing the public they are entrusted to serve.

Lack of Justification
AES has not sufficiently demonstrated a public need for this rate increase. While AES claims the additional funds are necessary for infrastructure upgrades and operational sustainability, the details provided to consumers have been vague, lacking transparency and accountability. Customers deserve clear documentation of how these funds will be used and why existing revenues are insufficient.

Disproportionate Impact on Low-Income and Working-Class Families
Raising electric rates during the summer—when usage naturally spikes—will disproportionately harm low- and moderate-income residents, many of whom are already facing increased eviction rates and high energy burdens. It risks exacerbating energy insecurity and pushing vulnerable families further into crisis.

Request for Regulatory Oversight and Denial
As a public utility, AES operates under a mandate to serve the public interest. I am urging the IURC to:

Reject the current proposed rate increase until a full, independent audit can be conducted into AES's budgetary practices and claimed justifications.

Mandate greater transparency from AES on how customer funds are allocated and how rate increases will impact diverse communities across the state.

Require AES to present alternative funding proposals that do not rely on additional financial burdens to customers, such as cost reductions in executive compensation or redirecting non-essential capital expenditures.

The role of the IURC is to act as a safeguard against exploitative practices. I trust you will uphold your responsibility and carefully scrutinize this rate case to protect the interests of Indiana residents.

Thank you for your time and for considering the needs of consumers.

Respectfully,

Brandon W. Rickey, J.D.,M.P.A.

Type of Inquiry: Case Comment
Comments: AES seeking another rate hike is absolutely absurd. Year after year AES continues to fail as an electric company. When power is lost you can expect longer than normal outages due to their inability to plan and execute restoration. They are not easy to communicate with and receive updates from. They also are making zero improvements to the infrastructure. It's 2025 and our.rstes have continued to go up. How about AES starts burying power lines like other modern cities. Imagine having an updated infrastructure. Until AES has an actual plan of improving the infrastructure and also can demonstrate that a simple thunderstorm won't knock out power for half the city for 4 days, we cannot allow them to increase rates.

46258

Brian Lafayette Indianapolis 46224
I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://www.uwci.org/blog/updated-alice-report-2024).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258

Brian Lafayette Indianapolis 46224

I am against any rate increase AES proposes. They are a greedy utility company that barely covers its customers. This would be a slap in the face to all of the customers who are struggling. I would ask every commissioner and judge to look at themselves in the mirror and ask if this is something you would feel good about happening to your family and friends. AES is an awful company and working for them makes you complicit.

Re: Cause Number 46258

Dear Consumer Services Staff,

I am writing to express my strong opposition to the rate hike requested by AES Indiana under Cause No. 46258. Regardless of the reasons AES Indiana claims a rate adjustment might be needed, I believe the real and significant impact on rates—both now and especially in the future—stems from the proliferation of data centers, which consume enormous amounts of energy.

These data centers are forcing end users of electricity, like myself, to subsidize their extraordinarily high energy costs. As a result, we are paying more for electricity to fund the expansion of the grid and the construction of additional power plants now and in the years ahead. It is clear that the more data centers that are built, the greater the demand for power will become, inevitably driving our rates even higher.

I urge you not only to decline this rate hike but, more importantly, to implement a policy ensuring that all approved data centers are not permitted to connect to the electric grid until they can demonstrate their ability and willingness to either provide their own power generation or pay in full for their power needs. Under no circumstances should their power requirements be subsidized by the everyday users of the power utility.

Thank you for your attention to this matter and for considering my concerns in your review of Cause No. 46258. I look forward to your efforts in protecting consumers from unjust rate increases.

Sincerely,
Bryan Wolfe

OUCC Public Comments
115 West Washington St., Suite 1500 South
Indianapolis, IN 46204

To Whom It May Concern,

I am writing as a concerned resident and utility customer to express my strong opposition to AES Indiana's latest proposal to raise electric rates by an additional 13%. This increase comes directly on the heels of last year's significant rate hike, which has already left households like mine paying nearly double what we did previously.

For ordinary Hoosiers, this is not just an inconvenience — it is an impossible burden. In recent years, families have been crushed by rising costs: skyrocketing property taxes (mine alone have increased 250% since 2017), food prices, health insurance premiums, and homeowners' insurance rates, and now doubling in nearly every aspect of daily life due to pointless tariffs. Adding another double-digit percentage increase in utility bills is simply unsustainable.

The stories I've personally witnessed illustrate the devastating impact. At a recent hearing you held, I listened as elderly residents shared how they cannot afford to keep their lights on. One woman, fresh from dialysis, described returning home to find that her electricity had been shut off. This is not hypothetical. These rate hikes are forcing people to choose between survival and basic dignity.

At the same time, Indiana is seeing a surge in interest from large-scale data centers and other energy-intensive industries. These facilities consume massive amounts of electricity and require significant upgrades to the grid. It is only fair and just that any new data centers or similar operations be required to cover the full costs of infrastructure additions and the energy they demand, rather than shifting those costs onto families, retirees, and small businesses who are already struggling. Everyday Hoosiers should not be asked to subsidize corporate expansion, particularly when they are already receiving significant tax incentives that are also being carried by residents.

Meanwhile, AES's CEO earns a whopping $13 million per year. That's 250% what an average employee makes – and all while people are losing their homes because they're being priced out of

being able to afford basic necessities. It is unconscionable that corporate executives continue to profit like this while Indiana residents are asked to sacrifice more.

I urge the OUCC to recognize that these increases are not only excessive but fundamentally unjust. The cumulative effect is crushing the elderly, middle-class families, and working households. Approving another 13% hike would accelerate a crisis that many Hoosiers are already living. I can tell you for certain that my 3% annual raise has absolutely not covered the increases I've been hit with in every direction.

Please reject AES Indiana's request for this additional increase. We cannot continue to absorb these costs — and we should not have to.

Respectfully,

Lynette Rowland

Utilities provided to Indiana residents should not be subject to profitability. There are several points I wish to make:
1. AES electric service is a monopoly and residents have no choice but to use this provider. Therefore profit margin should be nothing. If we don't have the choice of providers and cannot decide who to get our service from, the company should not be profitable, they should be a not-for-profit organization.
2. Electric service is a necessity in today's world. Therefore, this utility should not be a profit center, it should be a service similar to public schools, fire departments, police departments, etc., except that since we pay a monthly rate, we should not be taxed to support it. Ideally, Indiana should provide a public electric utility. In central Indiana, TriCo Regional Sewer is a monopoly-sewer utility provider that is a not-for-profit company. THIS is how electric should also be provided.
3. AES has wasted thousands and possibly millions of dollars in their failed billing system during the past year or more. Non-monopoly companies would be charging those wasted dollars to their profit margins and having to answer to stockholders as to why such a failure happened and lowered profits. They should not be asking for an increase in profits to cover up their blatant errors.
4. OUCC is supposed to represent residents of Indiana, not utilities. It seems like in past years, OUCC/IURC has rubber-stamped rate hikes to the detriment of Indiana residents. Do your job!
5. Why on earth is OUCC/IURC considering a higher profit margin for this utility rather than lowering their profit margin? As stated above, they are a monopoly, we have no choice. Their profit should be much lower than the already 9-something percent that they are getting (notice I didn't say 'earning').
6. AES seems to be accountable to no one, including the OUCC/IURC. This must change. Indiana needs to rein in this monopoly and put some strict controls and regulations in place.
7. The cost of living is becoming untenable with the greedy profit-seeking of corporations. This is just another example of it. Again, a monopoly-utility should not be boasting high profits. Electric service is not a choice in today's world. It is not something that a low-income household can do without. More and more households are falling into the low-income bracket with rising costs. Again, it should not be a profit center. If AES is bent on profit-making, they are in the wrong business and need to be removed as a utility provider.
8. OUCC/IURC just approved a rate hike for AES just over a year ago. They need to make do with less.
9. I am a senior on a fixed income. My income is not increasing to account for this blatant greedy money-grab. OUCC, do your job!

Comments: IURC Cause No. 46258

I am urging you to stop the AES rate hikes. It is extremely frustrating being in a country and state that outwardly says it is anti monopoly, but then allows utility companies have monopolies. We cannot shop elsewhere. So my only options are to just pay more or leave my home. Not only is that not feasible for me, but I would just be moving to another monopoly.

And out local government cannot make decisions to change this due to state regulation. We should be able to take over our own electrical system and run it as a municipal agency, but the state has block Indianapolis from being bale to do this.

Since local government can’t act and consumers can’t act, the utility regulators MUST. And they have the power to!

The IURC can and should lower the amount of profit that AES is allowed to collect. If they lower the rate of profit to a still-healthy 5.1%, AES could do all of their proposed upgrades without raising anyone’s electric rates.

If they refuse to do this, they should at LEAST stop making families subsidize big businesses, and stop making efficient customers subsidize inefficient ones.

Do what is good for your PEOPLE, not for businesses.

Comments: Re: #46258

To IURC Regulators: A 30% MONTHLY rate increase in my electric bill is outrageous and downright immoral to put on the backs of residents. If and when (h-ll freezes) and my income is raised 30%, then perhaps we can begin to have a conversation. Not before.

I testified 15 + years ago to protest when AES submitted another rate increase request. There have been a few others along the way. The last was just TWO years ago. These requests are accelerating at an alarming rate.

AFTER executive staff and shareholders cut their increases, THEN we ratePAYERS may consider a NOMINAL increase. But not to fatten the wallets of CEO, stockholders, et al.

Also, IURC needs to rein in AES disproportionate increases for residents as compared to commercial and industrial customers. I do not see comparable rate increases for business customers; in fact, I believe industrial customers will see only a 10% rate increase in their utility bills. Yes, they have greater expenses. However, they can also raise their prices to cover utility rate increases. As a resident, I cannot, especially as a semi-retired senior. In fact, I must continue working to pay for these utility rate increases. I ask you: what do I NOT pay? My food, meds, doctor bills, mortgage, insurance?

I request NO rate increases to residents until:
- business customers pay their equitable share
- executive staff and shareholders pony up and cut their compensation and shares by 30%

Pragmatically requested,

Comments: I am writing to add a comment on the IURC Cause Number: 46258. I believe the constant raising of prices at AES is not only harming our community, but a way for the rich to continue to get richer. This increase is not just to cover the costs of inflation, but to help stakeholders gain more and more money when our community is struggling more than ever. People in our community are not able to afford housing, let alone electric and water/gas bills. AES is a monopoly as we have no choice but to pay them for our electric coverage. Not to mention - we have some of the worse storm prevention and management. Many households on the east side have constant power outages with bad communication from AES. Please, if you care about the local community members that make Indianapolis what it is, do not allow another rate increase from AES. Let's find other solutions instead.

Hello OUCC Team,

I'm writing to urge you to oppose any rate increase requested by AES Indiana.

As a Central Indiana resident and AES customer, I've seen repeated billing errors and incorrect charges affecting people across our area. Those mistakes erode trust and raise serious questions about billing accuracy, customer service, and internal controls. Until AES can demonstrate sustained improvements and transparent safeguards that prevent overcharges, asking customers to pay more is unreasonable.

On a personal note, my income is set by contract. Like many Hoosiers on fixed or predictable earnings, I budget carefully for utilities. Higher rates would force difficult trade-offs, especially as both summer cooling and winter heating costs strain households.

It is also concerning to see AES publicize a $375,000 donation to Marian University and then seek to raise rates on customers. While charitable contributions can benefit the community, customers should not be asked to shoulder higher bills while the company chooses discretionary spending. That choice sends the wrong message about priorities and affordability.

I respectfully ask the OUCC to:

- Oppose AES Indiana's rate increase.
- Require a thorough, public accounting of recent billing errors and specific corrective actions.
- Tie any future consideration of rate adjustments to measurable, independently verified improvements in billing accuracy and customer support.
- Prioritize affordability protections for fixed-income customers.

Thank you for your work reviewing this case and protecting consumers. Please keep me informed of opportunities for public comment and any hearings.

Sincerely,

Chelsea Helms

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Sirs-

am writing to oppose AES Indiana's proposed 13.5% rate increase. Families in Indianapolis are already struggling with high bills—nearly half of AES customers reportedly received disconnection notices this year—and adding an average of $21 more per month will make matters worse. Customers should not be asked to pay more for service that has been marked by frequent outages and reliability concerns.

The proposed increase also appears profit-driven rather than consumer-focused. AES Indiana already has the highest approved return on equity of any investor-owned utility in the state, and this plan would push profits even higher while leadership compensation remains excessive. Asking ratepayers to fund corporate profits and executive pay, instead of demonstrating clear improvements in service, is unacceptable. I urge regulators to reject this hike and demand accountability from AES Indiana before considering any additional increases.

Sincerely -
Cheryl Smolecki

Utility: AES Indiana
Cause Number: 46258
I am a customer of AES Indiana. These comments are submitted on my own behalf.

I am writing in opposition to AES Indiana's requested rate increase. On June 11, 2025, from approximately 7:00 PM to 8:30 PM, my home lost power. The weather was moderate, around 85°F — not the kind of extreme heat you'd expect to cause instability.

What stood out was the pattern: the AES outage map showed small pockets of outages affecting a few dozen customers at a time in what appeared to be evenly spread throughout Indianapolis. This did not look like a typical equipment failure or storm-related issue. It strongly resembled a staged capacity test or intentional load reduction.

If this is how the grid performs under moderate conditions, it calls into question whether previous funds for "resiliency" were spent wisely. Approving another 13.5% rate increase under these circumstances feels like rewarding mismanagement.

I urge the IURC to:

Investigate the cause and pattern of the June 11 outage

Review past rate increases for reliability investments and outcomes

Require AES to provide evidence of responsible stewardship before any further rate approval

Sincerely,
Christopher Reeves

To Whom It May Concern at the Indiana Utility Regulatory Commission,

I am writing as a concerned AES Indiana customer and Indiana resident to formally oppose the proposed electricity rate increase submitted by AES Indiana. This increase—estimated to raise residential bills by 13.5% or approximately $21 per month by 2027—is not only unjustified, but deeply harmful to working families, retirees, and those living on fixed incomes.

AES Indiana is already one of the most expensive private electric utilities in the state. According to the 2023 residential bill survey, AES ranked second-highest in cost among investor-owned utilities. Now, the company is seeking to collect an additional $192.9 million annually from Indiana customers—despite already generating billions in revenue and reporting a profit of $260.9 million in 2024. If approved, their profits would soar to $417.2 million by 2026. This is not a modest adjustment for operational sustainability—it is profit gouging.residential customers. AES is asking everyday households to absorb the largest increase (13.45%), while large industrial customers—such as data centers and manufacturers—would see only a 2.5% increase. This regressive model forces families to subsidize corporate energy consumption, a move that feels both unethical and economically irresponsible.

AES claims the increase is necessary due to rising costs in areas like vegetation management and infrastructure upgrades. Yet these costs pale in comparison to the scale of profit expansion AES is pursuing. The company is also requesting a 10.7% return on equity—higher than any other investor-owned utility in Indiana. In plain terms, AES is asking Hoosiers to pay more so shareholders can earn more.

For many families, an extra $30 a month could mean choosing between electricity and essentials like medication, groceries, or transportation. This rate hike would deepen financial strain at a time when inflation and housing costs are already squeezing household budgets.

I urge the Commission to reject AES Indiana's proposed rate increase. Protecting consumers from monopolistic overreach is not just regulatory duty—it is a moral imperative. Please stand with Indiana families and say no to this unjust proposal.

Sincerely,

Christopher L Parchman

Comments: I am strongly opposed to the rate increase by AES. I continually see the company asking for more money but the company has had record profits these last 2 years. I wasn't a utility company that isn't international or largely national so our customers are not fitting their risky business deals they do for their other sites. Net income soared to $1.68 B in 2024, nearly a sevenfold increase from 2023's $249 M. This shows that they did not need their prior increase of rates and definitely not the next they're trying to propose

From: David Greene
To: UCC Consumer Info
Subject: David Greene - AES Energy Rates
Date: Tuesday, August 26, 2025 9:09:02 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I strongly urge the Indiana Utility Regulatory Commission to reject or significantly reduce AES Indiana's proposed rate increase. Many Hoosiers are already struggling, nearly half of AES customers have received disconnection notices in the first half of 2025. Adding an additional projected $21 to $30 per month to their bills for a typical 1,000 kWh household will make essential electricity unaffordable for far too many.

What makes this proposal even more unjust is that residential customers are being asked to carry the burden of what commercial and industrial businesses should be paying. AES's declining block rate structure means that large power users, like big businesses and data centers, get cheaper rates the more electricity they consume, while everyday families pay the highest per-kWh charges. That's backwards and deeply inequitable. Residents are subsidizing businesses, and the people who can least afford it are footing the bill for those who can.

On top of that, AES proposes to raise the fixed monthly customer charge from $17 to $20, nearly an 18% jump. This regressive charge hurts seniors, small households, and families who try to conserve energy the most, forcing them to pay more no matter how little electricity they use.

In a time of rising housing, food, and healthcare costs, the IURC must weigh the human impact of these increases above corporate profit margins. Many residents are already choosing between keeping the lights on and other necessities. This increase would only push families further into hardship while commercial entities enjoy discounted rates.

I urge regulators to reject this unfair shift of costs onto households and demand that AES adopt a fairer rate design, one that holds businesses accountable for their actual usage instead of making hardworking families shoulder the load.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I wanted to provide the OUCC with feedback relative to the recent news about AES rate increases. I want to specifically identify 2 situations where past increases created heavy burdens to small non-profit organizations I am involved with. My objective is to share the burden of the high cost of just having a meter, irrespective of the amount of electricity used.

Some years back, it was approved to allow AES to charge roughly $40 for just having an electric meter. The Indianapolis Soap Box Derby organization pays for 2 meters on Indy Parks property. The meters are about 1200 feet apart and are used to operate equipment to conduct races at the Wilbur Shaw hill at 30th and Cold Springs Rd. This 501c(3) that serves children in the Indy inner city saw its electric bill of $15 a month to increase to about $95. In a years time that is almost $1000 - which is about the cost of enabling 10 kids to participate in 4 races each. So that was a big impact to an organization that relies 100% on private donations.

In a similar situation our neighborhood civic association has 2 meters each of which power a few lights at the 2 entrances to our neighborhood. We typically see a monthly invoice of $90. Our association is not a mandatory one so not everyone participates. The cost of keeping these lights on is roughly 8-9% of our budget. So in this case as well, the base meter cost that was created some years back has had a big impact on our neighborhood's very small budget. As in the case above, this limits our ability to fund other things such as social events or block parties.

While I understand utility companies have the need to make investments in services, I would ask the OUCC to consider the impact of rate increase on small organizations that use a very small amount of electricity. My concern is that any increase in charges for meters would be disproportionate in its impact to such organizations. Further, such increases would also impact all consumers with low usage and low incomes in a disproportionate manner.

As we see large data centers being constructed along with large construction projects (Lilly, IU Health) OUCC needs to ensure that the increased need for power in the state

and the requisite improvements for such expansion is properly attributed to and financially covered by the very large consuming organizations without creating hardships for small consumers.

Respectfully

David Huffman

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Deborah Davison here. I'm a AES customer. I live at 1055 Miles Way Greenwood In46143.

I'm totally against this company asking for yet another rate hike. I have been on their " budget" plan for the last 18 years with them. I don't use them for heat, only Electricity and A/C. I have all brand new windows and a new storm door., I keep my A/C on 75 in the summer time. My house is 1,000 sq feet. Yet each year when it is " settle up month" from the budget they raise the amount. This year was no different. A 16.00 raise in rate plus I owed them 148.00. I called them asking why? Their c s r told me because they are AES . Now mind you I will be 70 in January so obviously I'm on Social Security and I'm still working part time That " raise" everyone on Social Security gets each year doesn't keep up with this companies rate hike.
I will tell you what that company can do to cover the rate hike that they want.
Tell the CEO to cut his high salary in half
and live off half of it (because I'm positive it's more then my Social Security and part time job, and tell him to take the other half and cover the rate hike.

Comments: Good evening,
I just read in the news that AES is attempting to push through another rate increase. I strongly disagree with this and would like you to deny their request.

I was shocked to read in WISHTV's article that AES wants this rate increase in order to increase its profit margins. AES already has a high profit margin! The article also said they paid their CEO $13 million in 2024. Clearly, AES has plenty of money. They don't need more of ours. This is pure greed.

Unlike AES's CEO, who made more money in 2024 than many Hoosiers will make in a lifetime, most Indiana families are having a hard time getting by with inflation. Our bills have gone up enough lately, and AES just raised rates not that long ago. Why should we pay more just so a guy who already has at least $13 million and a bunch of Wall Street investors can get even richer? They don't need the money. Our families do.

This rate change will also hurt families and small businesses the most. Why are they trying to raise the rates on homes and small businesses more than big tech's data centers? Last I checked, big tech is turning record profits and has plenty of money to pay higher bills. If AES really wants to charge more, maybe they should start by charging those tech companies more instead of picking on the rest of us. After all, it's the big data centers putting strain on our electric grid, not ordinary families and small businesses who just want to keep the lights on.

I hope you will reject AES's request to raise rates.

Type of Inquiry: Case Comment
Comments: Dear Office of Utility Consumer Counselor,

I am writing as a concerned resident of Indiana to formally oppose the proposed rate increase by AES Indiana.

Utility rates are already a significant burden for many households, and increasing these rates—particularly in today's economic climate—would place an even greater financial strain on families, seniors, and low-income residents across our state. At a time when many Hoosiers are facing higher costs for essentials like food, housing, and healthcare, this proposal is both ill-timed and unreasonable.

It is my understanding that AES Indiana is requesting this increase primarily to fund infrastructure upgrades and modernization projects. While ongoing improvements and reliable service are important goals, I strongly believe that consumers should not be responsible for paying for corporate upgrades that benefit the company's long-term profitability. Ratepayers are already fulfilling their obligation by paying monthly utility bills—and they should not be treated as an open funding source for capital investments that AES has the means to finance through other mechanisms, including shareholder contributions or reinvested profits.

Before approving any rate hike, I respectfully request that your office:

Rigorously audit AES Indiana's financials to determine whether the proposed rate increase is truly necessary.
Require that the company explore cost-saving and alternative funding strategies before shifting the burden to consumers.
Consider the disproportionate impact this increase would have on economically vulnerable communities.
Demand full transparency on how any new funds would be used, and how those expenditures directly benefit consumers.
The mission of the OUCC is to represent the interests of utility customers, not utility shareholders. I urge you to advocate on behalf of Indiana residents and recommend that the Indiana Utility Regulatory Commission deny this proposed rate increase or significantly reduce it.

Thank you for your attention to this matter and for your continued service to Indiana consumers.

Sincerely,
Deena Miller

Subject: Diane A Walton - AES RATE INCREASE Cause 46258
Date: Tuesday, August 26, 2025 10:37:13 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Fine,

I am writing to express serious concern regarding the high rate increases recently placed on customers in the Indianapolis area. These increases come at a time when many households and businesses are already facing higher costs across the board.

It is understood that AES, in partnership with Lennox's Commercial Business Segment, is working to expand into the light commercial HVAC market. While business growth and investment in infrastructure can bring long-term benefits, it appears that these rate hikes are, in part, funding that expansion. In practice, this means that the people and businesses of Indianapolis are being asked to "fit the bill" for AES's market growth initiatives.

I believe that customers should not bear the financial weight of corporate expansion plans. Ratepayers deserve transparency on how these increases are being allocated and a clear explanation of how AES intends to balance its business interests with the responsibility to provide affordable, reliable service to its customers.

Therefore, I respectfully request that AES:

1. Reconsider the scope and pace of these rate increases since 2023.
2. Provide customers with detailed information about how those with inabilities to pay will be impacted and plan for assistance.
3. Outline alternative strategies for growth that do not come at the direct expense of Indianapolis residents and businesses.

The people and businesses in our community should not be burdened with subsidizing expansion projects that serve corporate interests rather than directly improving local service. I live in an area where I have no choice of the electric company. I urge AES to put customers first and take meaningful steps to address this issue.

I am opposing AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills AGAIN!!

Please stand up for Hoosiers and reject this rate hike request!

Sincerely,
Mrs. Diane Walton

The following concern was also sent to AES:

Unfortunately, I am on a fixed income, like so many other Seniors, so while the $21/month and even more of an increase later appears small to AES, it will become monumental to the consumer, who needs the service but whose income cannot accommodate the increase along with other increase in cost of living. Bus transportation up $1 a ride. There's has to be a more equitable way. Yes this is sent on my behalf, yes I am a customer of AES.

Case Description: I do not agree with aes recent request for a rate hike. I do not remember the exact date but hasn't aes been approved a rate hike in the last 10 years? aes has promised an update to the power equipment in my area and i have not seen or noticed any improvements. as a matter of fact the last big storm in this area knocked out power for over 4 hours. we always see flickering lights and surging electric bills. even the commercial areas in my neighborhood do not keep consistent power. the grocery store is losing power kind of regularly and i usually avoid they're freezer fridge section as much as possible. I would like to see improvements from the last rate hike before i can even think about they want more...putting strain on an already weak customer base is not the answer all the time. how about deliver on promises from 10 years ago. also the big smoke stack is a constant reminder of the waste of a rate hike to build a better system to burn dirtier coal. i hardly ever see it used anymore. only stack i see used at the electric company is the 100 or some year old one not the one that not only was there a rate hike but old ditch Daniels raised taxes somehow for it too.

Utilities: AES Indiana Rate Case Cause No. 46258
Type of Inquiry: Case Comment
Comments: I attended Public Hearing #1 at the West Perry Branch library on August 18, 2025, IURC Cause No. 46258. Although the IURC and a judge were physically present, the hearing felt like a formality exercise. Citizens earnestly testified about AES's strong financial position, excessive consumer bills, repeated billing errors compounded by inadequate customer-service access, incomplete tree removal, and frequent power outages. Those statements were recorded—but who actually reads them? Do the IURC reviewers even consider this testimony when making decisions?

Because this event was structured as a hearing, there was no exchange between IURC members and the public. We were not given the dignity of a response. I want to know what the IURC is thinking about these issues and, most importantly, why you vote the way you do. The public deserves clear, written explanations tying testimony, evidence, and legal rationale to any decision that affects our rates and living conditions.

Two days later, at the MDC hearing on August 20, 2025, regarding the data center, it appeared the Commissioners had already decided. Their questions were superficial, and there was no pause to reconsider despite detailed remonstrations. The decision was delivered quickly, with no explanation. This pattern—citizens testifying, officials nodding, and decisions handed down without justification—erodes public trust.

Public servants are entrusted to protect residents, not to enable corporations at the community's expense. If you value that trust, demonstrate it: explain how citizen testimony is reviewed, publish the rationale for your votes, and deny any AES rate increase unless it is justified transparently and in the public interest.

Comments: I am a customer of AES, and the bills have been rising and rising without stopping. When there is an outage, they are not prepared, and the homeowners suffer from their lack of response. Every time my power has been out, I have been forced to deal with my family, who have no air conditioning, or power or losing days at work for when I work from home or my food in my fridge and freezer going bad with no compensation from AES for the outage that they expect me to still pay for when the bill comes with no credit or anything for the additional costs that I have incurred. There should be several companies that want to provide service, so they have to offer good service to their customers. AES just wants more money in their pocket and has done nothing to prevent the power outages by any upgrades or extra money on their part to offer a good service to their customers.

Dear sir/madam:

I am AES customer.

I am not in favor of proposed 13%+ increase. One, you site
E states last increased was approved in 2024 and that is too recent to for this new increase request. Everyone has been affected and trying to make it until the economy stabilized. Two, what is their ratio of future cost to annual profit in the last three years. They may provide service the public needs but as business what has been their planning for industry updates they should be planning years out and how many did they make from 2024 to now. If approved it should not be at the number asked, they are business and need share in their profits for future updates as again they getting have vested interest and return that should be scrub tide as well. And it does not sit well that if a company this large over other states, CEO gets 13million so if he is doing well to get bonus how did this get missed. And how much are they requesting from other states for increases? You need full disclosure to determine what increase and without their profits last three years, proposal of increases in surrounding stares and did they do with last increase only then can the Board make a fact finding.

Comments: AES Rate Increase 46258

AES should not be allowed to increase rates again. They just increased them recently. While it is a more complex operating environment they are paying themselves too good at the expense of harm to the poor, people on fixed incomes, and small businesses.

The folks behind these data centers and big energy projects should not be given blanket approval to proceed with them, and the entities initiating these projects should have to be the ones to pay the increased costs.

When you look at the executive compensation for this company and it's parent and related companies it's absolutely ridiculous. Their bonuses have bonuses. All while they pollute the indianapolis air, and are dumping their crap into or beautiful White River in Martinsville, Indiana.

I am on the budget plan already for a 963 square foot house. I have lived in my little, simple house since 2003 and have seen my bill sky rocket.

As you all know the Indianapolis weather has been perfect for the last week, and I have wanted nothing more than to open the windows and let my house breathe; however, I am reluctant to do that due to unacceptable air pollution for which they are a large contributor by burning sulfur coal. I think it was Friday morning, 8/29/25 when I opened my kitchen window in the morning only to quickly shut it when the great fart breeze blew in from outside. The remainder of burning sulfur coal at night. The same thing happens when you have a lovely evening outside, but by about 8:30 or 9 pm the great fart/boiled egg smell against drifts in, and you have to shut the window. This is highly toxic pollution that has been shown to have all kinds of serious detrimental health effects.

I do not believe they deserve this rate increase.

If you award it to them then you are just shitting on the hard working and vulnerable people of Indianapolis.

AES does some things well, but their computer upgrade was a disaster that cause caused trouble for their customers, they are not a green company despite what they try to get folks to believe, and their service has declined.

Granting this rate increase is the wrong thing to do. I believe it was a very compelling Jenny Lee who very articulately described why they should not be passing the hat around to their residential customers.

Your community has spoken by going out of their way to attend packed meetings at inconvenient times.

Please demonstrate that you listened and that this is not a done deal.

From: Emily Sink
To: UCC Consumer Info
Subject: Emily Sink - Concern About AES Bill Increases and Community Impact
Date: Thursday, June 26, 2025 8:35:22 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Office of Utility Consumer Counselor,

I'm writing as a concerned resident of Indiana regarding the continued rate increases by AES Indiana. These rising costs are putting an unsustainable strain on families, working individuals, and vulnerable residents across our community. I urge your office to reconsider and challenge further rate hikes on behalf of the people you serve.

For many of us, utility bills are becoming unmanageable—often rivaling or exceeding rent, food, or medication costs. This is especially true for low-income households, single parents, the elderly, and those on fixed incomes. Many families are being forced to make difficult choices between basic necessities in order to keep the lights on.

Several key concerns include:

- Lack of Transparency: Many community members do not understand the reasons behind the increases. There's little clear, accessible communication from AES explaining what the funds are being used for or how consumers benefit.

- No Real Alternative: Electricity is not a luxury—it's a necessity. With AES being the primary provider for many residents, people have no real choice or competition, yet we are being subjected to corporate decisions that impact our quality of life.

- Burden on the Working Class: Wages are not keeping pace with the rising cost of living. Utility hikes, especially without any relief programs or grace periods, are pushing more people into economic hardship.

- Disproportionate Impact on Marginalized Communities: Many Black, Brown, and working-class neighborhoods are disproportionately affected, deepening cycles of financial instability and systemic inequity.

I strongly believe that energy providers should be held accountable to the communities they serve. Rate hikes should not be allowed without a thorough public hearing process, transparent justification, and a clear benefit to consumers—not just to shareholders.

Please advocate on our behalf. We need protection, fairness, and policies that reflect the values of equity and compassion, not corporate profit.

Thank you for your time and continued service to Indiana's residents.

Sincerely,

Emily Sink

Indianapolis, IN, 46202.

To: UCC Consumer Info
Subject: Erica Knear - Opposition to Proposed AES Indiana Rate Increase
Date: Sunday, August 31, 2025 12:03:10 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Consumer Counselor,

I am writing as a concerned Indianapolis resident and AES Indiana customer to respectfully urge your office to oppose AES Indiana's proposed two-phase rate increase.

While I understand that utilities face rising costs, this proposal would create a disproportionate and unsustainable burden on households and small businesses in our community. As filed, the increase would raise residential bills by more than 13% over two years—adding approximately $20–$30 per month for the average family. For many of my neighbors, who are already struggling with higher costs of living, that additional expense could mean choosing between paying for electricity, groceries, or medicine.

Consumer advocates, including the Citizens Action Coalition, have raised serious concerns that residential customers will shoulder the steepest percentage increase compared to other customer classes. This feels inequitable, particularly given that so many AES Indiana customers have already received disconnection notices in the past year.

Local businesses have also testified that higher electricity costs could jeopardize their operations and staff. As one small business owner put it, every added utility dollar erodes already thin margins—making it harder to remain viable in Indianapolis. A stronger local economy requires stable, affordable utility costs, not new barriers to growth.

I am not opposed to investments in infrastructure or cleaner energy, but I believe these goals must be pursued in a way that balances affordability and reliability for the people who depend on electricity every single day. The current proposal, in my view, does not strike that balance.

I respectfully ask that you carefully consider the widespread financial hardship this increase would cause and recommend against AES Indiana's requested rate hike. Thank you for representing the interests of Indiana's utility customers and for giving residents like me a voice in this process.

Sincerely,

Erica M. Knear
Indianapolis Resident and AES Customer

From: Erin Case
To: UCC Consumer Info
Subject: Erin Case - IURC Cause No. 46258 / AES Rate Increase Proposal
Date: Wednesday, August 27, 2025 4:22:38 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

My name is Erin Turner, and I live in Indianapolis, 46201. I'm writing to express my ***firm opposition*** to AES Indiana's request to raise electric rates in order to increase its profit margin and funnel more money to shareholders.

Let's call this what it is: corporate greed at the direct expense of working families.

AES is already guaranteed a 9.9% return on equity. Now, they're asking for *10.7%*, which would suck another $27.4 million per year out of Indianapolis and hand it over to shareholders — many of whom live out of state or are part of massive institutions like BlackRock, which is rumored to be considering a buyout of AES. Which you should also not allow, as private equity is ruining this country.

I refuse to subsidize billionaires and their data centers. Our electric bills should not be jacked up to fund infrastructure that supports massive tech companies and industrial power hogs, while families are struggling just to keep the lights on.

The context here matters. In 2025, the cost of living is through the roof. Rent is out of control. Groceries and transportation are more expensive than ever. Public services are being cut. Meanwhile, nearly **half** of AES customers received disconnection notices in just the first half of this year — and **21,000 people actually had their power shut off**.

And somehow AES thinks this is the right time to increase its profit margins?

Worse still, AES's service has ***not*** lived up to its costs. Their customer system rollout was a disaster. Billing errors were rampant. Outages are more frequent, and power restoration after storms takes longer than ever. There is no excuse for this level of mismanagement — especially not from a company seeking even *more* profit from the people it's failing to serve.

Under a fair system, a company that performs this poorly would be driven out of business. **But because Indiana law protects their monopoly, AES faces no competition**. That means it's *your job*, as regulators, to protect consumers. You have both the authority and the obligation to hold AES accountable.

I am urging you to lower AES's allowed profit margin to 5.1%.
They can make necessary infrastructure upgrades with that return — and without charging us more. Anything higher would be a handout to shareholders at the expense of working Hoosiers.

If you *refuse* to reduce AES's return on equity, then you must at least:

- **Stop residential customers from subsidizing big business and data centers.** Industrial users should not be paying less per kilowatt hour while families pay more.

- **Protect energy-efficient and solar-using customers.** AES penalizes those who consume less, while rewarding waste. That's backwards.

- **Mandate stronger protections for low-income households.** When nearly half of AES customers are facing disconnections, it's clear that more must be done to keep people connected to this basic necessity.

We're not talking about luxuries here — **we're talking about lights, heat, refrigerators, and medical devices.** Raising rates for basic utility service while CEOs and shareholders rake in millions is immoral and disgusting.

Do the right thing: lower the rate of return. Protect residential customers. Reject AES's request.

Sincerely,

Erin Turner

To: Indiana Office of Utility Consumer Counselor (OUCC)

Thank you for the opportunity to register my complaint.

AES received approval for a rate increase in April 2024 which is in effect for 2025 is my understanding. Another rate increase is not justified so quickly, particularly for customers on fixed incomes which is a large part of the customer base.

The high costs of living in 2025 including residency, insurances, food, medical care, medical prescriptions, and transportation expenses have negatively impacted most consumers. We are struggling to make ends meet! The disproportionate pace and rate percentages of the rate increases to the majority customer base's fixed income percentages is punitive!

NO ELECTRIC PRICE HIKE! Give the economy time to revive before placing more hardship on the fixed income community, particularly, seniors, veterans, and all disabled and financially disadvantaged. Our community wants to THRIVE NOT BARELY SURVIVE. Please help the people with your decision.

Thank you again.

Hello, my name is Franklin J Willoughby, I am a homeowner in Lawrence and an AES customer, though not by choice. I have had nothing but bad experiences when dealing with AES, and they often ignore my complaints including when my home loses power. Despite numerous rate increases AES fails to provide reliable power, and the biggest slap in the face is that they cite the cost of tree trimming as to why they need to increase rates, however they have routinely refused tree trimming requests by myself and my neighbors. In my opinion the question should not be if AES should be able to raise rates yet again, but rather whether they should continue to be permitted to do business in indiana. until AES shows some concern for the people they serve they should be sanctioned, not rewarded. Please feel free to contact me at 317-376-2465 or at fjwilloughby@gmail.com

To: URC General Counsel (URC) <URCGeneralCounsel@urc.IN.gov>
Subject: Formal Complaint and Opposition to Proposed AES Indiana Utility Rate Increase

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Commissioners: I am writing to you as a concerned citizen, customer of AES Indiana (formerly Indianapolis Power & Light), and member of the Indianapolis community, to formally express my opposition to the proposed utility rate increase recently filed by AES. This proposed increase—occurring during a time of ongoing economic hardship for many households—places an undue and unjustifiable financial burden on customers who are already struggling to meet basic living expenses. Many Hoosiers are still recovering from the economic aftermath of inflation, housing shortages, and rising healthcare costs. For AES to request a rate hike at this time reflects a disconnect from the realities facing the public they are entrusted to serve. Lack of Justification AES has not sufficiently demonstrated a public need for this rate increase. While AES claims the additional funds are necessary for infrastructure upgrades and operational sustainability, the details provided to consumers have been vague, lacking transparency and accountability. Customers deserve clear documentation of how these funds will be used and why existing revenues are insufficient. Disproportionate Impact on Low-Income and Working-Class Families Raising electric rates during the summer—when usage naturally spikes—will disproportionately harm low- and moderate-income residents, many of whom are

already facing increased eviction rates and high energy burdens. It risks exacerbating energy insecurity and pushing vulnerable families further into crisis. Request for Regulatory Oversight and Denial As a public utility, AES operates under a mandate to serve the public interest. I am urging the IURC to: Reject the current proposed rate increase until a full, independent audit can be conducted into AES's budgetary practices and claimed justifications. Mandate greater transparency from AES on how customer funds are allocated and how rate increases will impact diverse communities across the state. Require AES to present alternative funding proposals that do not rely on additional financial burdens to customers, such as cost reductions in executive compensation or redirecting non-essential capital expenditures. The role of the IURC is to act as a safeguard against exploitative practices. I trust you will uphold your responsibility and carefully scrutinize this rate case to protect the interests of Indiana residents. Thank you for your time and for considering the needs of consumers. Respectfully, Brittany Bowman

Comments: I wholeheartedly disapprove of the AES recent request for rate increases. Why should the average rate payer foot the bill for the mega data centers that are already being subsidized by state and local tax payers in the form of tax breaks and reduced electricity rates. These are Trillion dollars companies who can and should be paying their own way and the promise of increased jobs is a farce. The only jobs will be temporary during the data center construction and then they disappear. This is a disgusting move by both AES and the state and local officials who hand out these sweetheart deals to ridiculously wealthy corporations. It needs to stop. Please decline the AES rate increases for the sake of the citizens of this state who will be negatively impacted.

Thank you.

Dear Counselor Bill Fine,

If we're being honest, one of the major reasons AES is considering raising prices for Indiana residents is because of the ridiculous drain on our energy grid that companies such as Amazon, Google, and other tech companies have caused by building their data centers. I do not believe that the major, multi-billion dollar corporations should have the ability to freely divert the intense amount of electricity needed to run and cool their super computers at the expense of regular citizens. AES should be demanding higher rates from these companies, not homeowners.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

Comments: My name is Grace Evans and I am a customer of AES Indiana. I am writing this message regarding Case 46258 and AES' desire to increase rates (again) in 2026 and 2027. In a time where many Hoosiers are struggling to make ends meet, it's reprehensible that AES is demanding more rate hikes despite already raising rates only last year and their continued mishandling of power outages. The CEO of AES takes home a salary of over $13 million dollars a year (this number doesn't include his shares in the company), and fellow executives of AES make well over $3 million each year. Perhaps instead of raising rates and putting operating costs on consumers who already pay way too much for poor quality service, maybe consider dipping into the ever-increasing profit of the company or cutting the pay of these men. They would still take home millions of dollars. The people of Indianapolis are forced to pay exorbitant portions of their income to the monopoly of AES in order to have access to electricity, and AES continues to spit in their faces in the name of profit.

Comments: We manage three large apartment complexes in the area and all of them have similar problems. On or around October 2023 AES changed billing systems. The changeover was a disaster. We had bills that went missing for months. We've had units that got shut-off for non-payments of bills we never received. We've had residents that learned the billing system was a disaster so took electricity out of their name so that we would find out six months after they left we had to pay hundreds of dollars (on occasion over $1,000) for past utilities for residents that had moved out. We've had some units vacant for months so the electricity should be in our name, and we'll get a bill for three days, and then no bill the next month. I have complained to AES. I have complained to the IURC. I have complained to the IAA. Still today, the billing system is a disaster. Our bills are normally around 20 pages with charges of around $3,000. Yesterday, at one of our properties we received an 81 page bill with about $16,000 of charges, a 59 page bill showing about a $15,000 credit balance, and a 7 page bill also showing an approximate $15,000 credit balance. The only thing we know for sure is they are all WRONG.The Indiana Apartment Association suggested we reach out to you. We have lost many thousands of dollars and hundreds of hours on this over the past two years. We were hoping it would resolve itself but are contemplating legal action because AES clearly is not motivated to fix the issue. PLEASE HELP.

Hello,

I strongly oppose AES's proposal to raise electric rates by 13.5% over the next two years. Families are already facing high costs for food, housing, and everyday essentials. This increase would place an even heavier burden on households that are already stretched thin.

Electricity is not a luxury — it's a basic necessity for daily living, health, and safety. Light and power come from natural, God-given resources, yet we are being asked to pay even more just to keep them on. This is not the time to raise rates when so many are struggling to make ends meet.

AES should focus on finding internal cost savings and efficiency improvements before asking customers — many of whom are already in financial hardship — to pay more. We deserve fair, affordable rates that prioritize the wellbeing of the community over corporate profits.

I urge you to reject this rate increase

Thank you!

Email: jakeschlegel86@gmail.com

Case Description: am writing in opposition to AES Indiana's requested rate increase. On June 18, 2025, from approximately 12:05 - 12:30pm, my home lost power. The weather was moderate, around 85°F — not the kind of extreme heat you'd expect to cause instability.
What stood out was the pattern: the AES outage map showed small pockets of outages affecting a few dozen customers at a time, evenly spread throughout Indianapolis. This did not look like a typical equipment failure or storm-related issue. It strongly resembled a staged capacity test or intentional load reduction.
If this is how the grid performs under moderate conditions, it calls into question whether previous funds for "resiliency" were spent wisely. Approving another 13.5% rate increase under these circumstances feels like rewarding mismanagement.
I urge the IURC to:
Investigate the cause and pattern of the June 18 outage
Review past rate increases for reliability investments and outcomes
Require AES to provide evidence of responsible stewardship before any further rate approval

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hi,

My name is Jacob Schlegel. I live on the east side of Indianapolis in the Little Flower Neighborhood at 1406 N Riley Ave. **In less than a month we've had three unexplained, unnannounced power outages in our neighborhood (and areas outside of our neighborhood).** There have been plenty more over the past 1-2 years as well.

The outages happen in the middle of the day and in normal weather conditions. This is extremely frustrating as someone who works from home and also has two little children at home that depend on power for their sound machines and air conditioning for nap time.

I've lived in Indianapolis my entire life (39 years) and have never experienced anything like this. Then, I find out that AES wants to do a rate hike to improve infrastructure. Needless to say, I'm skeptical. How can the public be assured they are stewarding their resources in a sound manner when they can't even seem to handle the basics?

I'd be interested to know what steps might be possible to prevent this rate increase and/or garner more public attention to the matter. As citizens, we don't have any other options for electricity outside of AES (unless we want to spend $100k to go off grid).

Thank you for youru time in reading this.

Best,

--

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,

It is crucial the Indiana Utility Regulatory Commission does not allow AES Indiana to change rates in cause number 46258. AES Indiana has the highest profit margin of all Indiana investor owned electric utilities. The IURC can reduce the profit margin and help central Indiana survive this affordability crisis. Not allowing AES Indiana to use declining block rates is another important result the IURC should order in this case.

Indiana must not force people to subsidize electricity for data centers and large factories. The AES Indiana fixed customer charge of $17 a month could be reduced.

I live on the south side of Indianapolis and buy electricity from AES Indiana. Central Indiana residents and organizations are paying attention to this case and providing information for the record. Please listen and help.

Thank you.

Utilities: AES Indiana
Type of Inquiry: Case Comment
Comments: My electric utility company, AES Indiana, has indicated that it will seek approval of a rate increase that most of the company's customers, including residential customers like myself, oppose. AES is seeking approval of estimated 7.5% increase beginning in the second quarter of 2026, and an another 6% increase in January 2027. That is a total of 13.5%. My AES bill covering the period between June 30, 2025 -- July 31, 2025 was $291.32, which was about $100 more expensive than the previous month's bill, $191.57, and my highest bill in 14 months. AES certainly does not deserve another rate increase when they literally cannot even keep the lights on in my neighborhood as it is? For example, so far in 2025, I have experienced at least four power outages, some lasting for hours. AES customers cannot afford to keep paying higher and higher prices for electric service, which never seem to end! Indiana Utility Regulatory Commission when considering whether or not to grant these rate increases, please think about the consumers who don't have endless budgets to keep paying seemingly never ending utility service rate increases.

---------- Forwarded message ----------
As a life long resident of Indiana I deplore you to NOT take a rate hike again. Retired folks who own their homes are tapped out!!!! We pay high property taxes every year.,We never truly OWN our homes. Our groceries, insurance , medicines continually increase! Our utilities are increasing beyond affordability. We recently learned about the usage table AES uses. The only thing we could do was to lower out water heater and close our pool early. This was heartbreaking to our grandchildren. We rarely ran the pump as my husband's a pro at keeping beautiful pool after 38 years as a pool owner.We don't cook indoors unless it is the microwave to keep the house cooler. We turned our air conditioning off. We kept it at 70. In the winter the heat is set at 65. We use comfy blankets and wear warm clothes all winter. We don't have excessive lights on and have eliminated using our porch light when we leave home. We disconnected our motion sensors and the light our garage opener triggers as it's opened. We emptied our second refrigerator also. This is just a few things we consider both minor but convenient. Also, for safety sake!! Crime is rising in our area. We now feel extra exposed and at risk.
I guess we will have to go further endangering ourselves and use candles inside, cook in my antique bean pot over an open fire and perhaps eliminate warm showers or wash our clothes in cold water?
Think about these things. Our incomes are FIxed! Getting a seasonal or part time job only raises our income tax. We already pay ! Our homes are paid for!
We can't afford to donate like we used to since the min limit for deductions have been increased!
I'm sure you think a 13% increase is minimal!! I wish our cost of living increase for social security was 13% but think about it. That would handle just your proposed increase!

Type of Inquiry: Case Comment
Comments: Greetings,
I just read the article regarding AES seeking to raise its rates beginning in 2026. This utility company needs to be held accountable for its poor customer service & shoddy maintenance of its power lines.
I live in the North Willow Park condominium complex. On June 28, 2024, a downed AES power line caused a fire in my neighbor's condo. Our 2 condos share a common interior wall. My neighbors condo received extensive damage & were displaced until this spring. I was displaced for 2 weeks due to smoke damage. This fire happened to be the 3rd fire my neighbors have had due to this downed AES power line. This recent fire was the most devastating. The fire Marshall's report clearly states this downed power line caused this fire; however, AES refuses to accept responsibility. In fact, AES told the fire department during a call while the fire was active that the downed power line was not live. That was untrue as AES workers responded to the fire & cut the power to the line.
The fire Marshall reported shortly after the fire, to those of us affected by this downed power line, that AES had plans to bury it, but not for 2 years. Coincidently, one week after this recent fire & the power line was re-attached, it fell again.
AES is a poor excuse for a power company. Trying to reach customer service is impossible & their only concern is squeezing more money from its customers & into their own pockets. I continue to also be troubled by their poor maintenance of their lines.
I have no trouble paying more for Good service & properly maintained & safe service; however, AES does not fall under such services.

Case Description: Rate increase. I know they will get at least a partial increase but, PLEASE, consider the consumer. AES needs to take responsibility for their own failings and also stop lining the pockets of those in charge.

Consumers are being eaten alive by higher & higher costs from utilities, property taxes, insurance, food, shelter, clothing. I have been priced out of my home of 23 years, and I am a privileged white person.

AES is forced to do remediation on their dumping of toxic substances into the river south of Indianapolis. I knew that a rate increase would soon be in the making. And, yes, I am correct. Their failure to restore services after large storms puts consumers in danger. They need to dip into their own pockets to fix their problems, PLEASE! This is the second or third rate increase in recent years. Consumers are still put in danger despite increases. Their problems are beyond money. Fix the problems inside FIRST & see what their savings are, exactly what consumers must do with their own finances. There is no one to bail us out.

Does ANYONE CARE about the consumer?

Date: Tuesday, August 12, 2025 3:23:30 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello

My name is Janice Childress and I am an AES customer (cause no. 46258). I live in Indianapolis in Lawrence Township, zip code 46236

My phone number is (317) 931-8904, email is Janice.childress@gmail.com

While I fully understand the need to improve infrastructure, my biggest complaint is the lack of competition. There is no way I can make enough improvements to my home to prepare for a 13.5% increase, over 3 times the inflation rate. I've already made nearly every one I can short of solar panels or moving. I have no other option but solar panels, which are not feasible now that the tax incentive is gone, or move out of the AES area.

Why is this monopoly ok? Granted, running electrical lines is not simple, but if there are no options and it is mandatory (I.e., a parent not providing electricity would have DCS take their children), how is a monopoly legal? If the state can punish me for not buying their service, why does it allow only one option? Why do I have no say in increases over something I cannot control? Shouldn't these be at least put up for a vote like school referendums?

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,

I received an update from Representative Carey Hamilton re: the requested rate increase from AES. I can't imagine you are going to hear from anyone who is for a rate increase.

Just a couple of thoughts: we are on the budget plan and because we were overpaying by quite a significant amount we were able to go a couple of months at the beginning of the year with no payment at all. Of course that's nice but if that type of situation is going on in a more widespread way I would think it would make cash flow for AES a little interesting sometimes. I don't have a solution to offer but just food for thought.

Also, we are without power pretty frequently. No real fault of the utility as we have had neighbors who were very against having their trees trimmed for many years. But we do lose power a lot so I see the linemen working so hard, sometimes in very inclement weather, to restore services to us. If some sort of hike - Rep Hamilton mentions 21% which seems excessive - were to be used to provide raises to those guys then I would be open to that. But 21% seems like a lot and I'd be willing to bet the front line folks won't be the recipients of those funds.

Lastly, things are overall just nuts right now with the orange man in office. Everything feels so uncertain. Literally everything. And it seems like everyone is trying to grab their piece of the pie while they can. In reality, what choice do we have? We need to have electricity and if they raise the rates I guess we'll have to pay it. We have 20 something kids who are new homeowners and that size of an increase would be a lot for them no doubt, as it would be for many others who are barely hanging on in this current climate. Including a lot of government workers who no longer have jobs.

I would ask why 21%? Why now? And what are the funds going toward? Is there some other workable solution?

I'll be watching for more info and I support Rep. Hamilton.

My name is Jennifer Oberding. I reside in Indianapolis, Indiana. 46219.
I am A current AES customer. Case #46258.
I am emailing on behalf of myself regarding the potential rate increase that could happen in 2026.
I don't feel this increase is necessary. I feel it would be detrimental to not just my own home and family, but to alot if not all of my neighbors, in my neighborhood, and my surrounding area.
I have a family of 4, 2 adults, and 2 dependents..I am the only income in my home due to cardiac reasons my other half is facing.
I've been on a payment arrangement since the restructuring of the AES system and it still seems as there is no relief in sight of the current arrangement.
Another increase in the utility cost will definitely put a further financial stress on my family, to the point where I would have to choose between my electric and food or necessities or insurance payment.. I vote no for the increase.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello -

I'm writing to request that rates for AES not be increased. My husband and I have lived in our home for 2.5 years, and in that time, we have had two periods where power was out for more than two days. In both cases, we had to throw out hundreds of dollars worth of food.

In addition, our bill has nearly doubled this summer compared to the last two summers. They overcharge, don't invest in their infrastructure, and don't do basic maintenance work that would prevent outages from occurring in the first place. For all of these reasons, they DO NOT deserve a rate increase.

Thank you,

Type of Inquiry: Case Comment
Comments: The rate increase without a cost of living increase greater than 2%-3% is unjust. to $2.85 billion. They expect Adjusted EBITDA with Tax Attributes to be between $3.95 billion and $4.35 billion for the full year 2025. We are absorbing an increase in groceries, takes, goods/services. My paycheck is shrinking by the second and providing my family a good quality of life is becoming increasingly difficult. We decided to raise our family in Indianapolis because it was safe affordable and the quality education system. More recently there's been a change and these additional increases are icing on the cake.

Comments: This letter serves as a formal protest from an AES Indiana customer regarding the proposed rate increase under Cause No. 46258. The customer resides at 7301 N 700 W, McCordsville and have been an AES customer since the company's inception. The proposed rate increase, which would raise residential bills by an average of 13.5% and increase the fixed monthly charge, is an unreasonable financial burden on households in central Indiana.
The justification for this increase is especially concerning given AES Indiana's recent performance. Customers have experienced numerous and prolonged power outages, suggesting that service reliability is inadequate. Customers should not have to pay more for unreliable service. Furthermore, AES Indiana customers have dealt with significant billing issues and poor customer service in recent years, further eroding public trust.
The proposed rate hike, alongside broader increases in the cost of living, will create financial hardship for the customer's family. I am adisable serior on a fix income and this increase would force my family to choose between paying our utility bill and other essential costs, such as groceries or healthcare.
The OUCC is urged to use its authority to represent consumers and recommend that the IURC reject or significantly reduce AES Indiana's rate increase request. Consider the direct impact on everyday Hoosiers already struggling to make ends meet.
Thank you for your time and for representing the public interest in this matter.
Sincerely,
Joseph Mattinhly

Subject: John Moor - Comments on AES 2025 Rate Case - IURC Cause No. 46258
Date: Saturday, August 9, 2025 1:20:54 PM

This is the first time you received an email from this sender (jlmoor@sbcglobal.net). Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

My name is John Moor, and I have been an AES customer for the last 43 years in Indianapolis (46220). My email address is jlmoor@sbcglobal.net.

I understand that utilities need to raise their rates to cover increasing business costs and add more capacity, so I would expect a rate increase that is slightly higher than inflation. However, the total rate increase AES is asking for is significantly more than that. This leads me to believe they have made some poor decisions, and they want their customers to bear the cost of them. One of these poor decisions is too much investment in renewable energy. As a professional electrical engineer with over 40 years of experience, it is apparent to me that current renewable energy sources are not the most suitable solutions to replace our existing fuel-based energy sources. These renewable sources do not meet some of the most critical system requirements for reliability, consistency, and cost. Using wind and solar power adds significant risk to our electrical grid. The blackout in Spain is an example of this risk being realized. Every new solar or wind installation makes the grid more unstable and less reliable. I understand that AES was likely under political pressure to follow the previous administration's guidance to rapidly convert to renewable energy, but that is no excuse for making poor engineering decisions. What I object to is being made to pay for those poor decisions.

Engineers will develop better energy sources, but it will take time. I do not believe that climate change scientists have created climate models that are accurate and reliable enough to justify the rush into the renewable energy sources they are promoting. Any objective review of their track record on predictions over the last 30 years will prove that. We need a better roadmap than wind and solar to bridge the time until reliable, cost-effective energy sources can be developed, but pouring money into wind, solar, or current battery technology is a poor financial decision. A more practical roadmap is to convert coal to natural gas generators while adding more nuclear generation until fusion generation becomes practical. I do not want to be forced to pay for something that will make my electrical service more expensive and less reliable.

I urge you to reject this rate increase and demand a more reasonable rate increase that does not include investment in the current solar, wind, or chemical battery technology.

Thank you for considering the views of AES customers.
John Moor

Subject: John Moor - Re: Comments on AES 2025 Rate Case - IURC Cause No. 46258
Date: Sunday, August 31, 2025 4:59:18 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I am adding another reason to my previous email for not accepting the proposed AES rate increase. According to research conducted by Kiplinger Finance, electric utilities are overestimating future electricity demand due to the growth of data centers, because a shortage of necessary semiconductors will limit data center construction. According to one estimate, projected data center demand from the U.S. power market is expected to require 90% of the global chip supply through 2030. Since data centers cannot consume virtually all of the worldwide chip supply, this indicates that the electricity demand from data centers will be less than the projected amount. According to one estimate, the average utility receives five to ten more interconnection requests than data centers that will actually be built, which means ratepayers will have to pay for the extra capacity. AES is likely expanding capacity that will not be needed until much later.

I appreciate your consideration of why this rate increase should not be allowed.
John Moor

Utilities: AES - Cause #46258
Type of Inquiry: Case Comment
Comments: I write to express my opposition to the AES Indiana Rate Hike request (Cause #46258). There are many reasons that AES's request for a rate hike should be denied including:
1) This rate hike will increase AES's already record high profit margin of 9.9% to 10.7%. The current AES profit margin far exceeds the reasonable normal profit margins a utility should expect to be paid. To allow it to increase is abhorrent.
2) The rate hike will discriminately hit residential customers much harder than other customers (commerical and industrial)
3) The uses of the money collected from this rate hike include cleaning up a coal ash dump. That expense should be borne by the investors and share holders, not the ratepayers.
4) The real purpose of this rate hike, it is suspected, is to help underwrite the utility use of a BIG DATA center owned by mega corporation Amazon. These proposed data centers are overwhelming opposed by the citizens of Marion County. The idea that the citizens/ratepayers must pay for an unwanted, unwelcomed development is outrageous -- particularly given that the owner of the warehouse is uber rich.
But you have heard all of these arguments, and more. You know this request for rate increase is widely unpopular. But I want you to consider something else in your deliberations about this case. Through out these hearings (I attended one last night) you heard over and over again about the extremely POOR service AES is providing its residential customers. They are literally price gauging the small residential user, causing OVER HALF OF THEIR customers to fall into arrears and ONE-Fourth being turned over to debt collectors. They are acting like predators and are inflicting pain and suffering on the most vulnerable and poor. AES provides substandard service, allowing outages to occur over and over again and creating long periods of time paying customers must endure with no service at the expense of valuable food and precious health. AND AES has been negligent in their upkeep of their infrastructure, a responsibility for which they are paid to do. This monopoly is failing at its mission.

I ask you this: Why would you reward such a disaster of public utility provider with a rate hike? What justification could you possibly make to support such a decision?

Someone at the hearing suggested that the City of Indianapolis should begin look at alternative ways to supply Marion County residents electricity. A municipal co-op perhaps might be a better way to serve our community. You should take note. People are tired of being victimized by rich, greedy corporations. To underestimate or to dismiss the people's frustration and sheer anger would be a big mistake.

All to say, there will be consequences if you decide to grant this petition. The people are at a breaking point. Even if the decision is made to deny this petition, I hope that the IURC will open an investigation into the practices of AES and call them into account for their abusive practices.

Subject: Jordan Bond - Cause No. 46258 Comment
Date: Thursday, June 5, 2025 7:37:12 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To whom it may concern,

My name is Jordan Bond, and I live in Indianapolis, IN 46220. I am an AES utility consumer. My phone number is 765-404-2485, and my email address is jordan.bond04@gmail.com. This letter pertains to **cause number 46258**.

I strongly oppose the request by AES to increase consumer energy rates by 14% by 2027. This is an excessive and unjustified proposal that should not be approved. The proposed infrastructure upgrade, which centers around a data center, offers minimal job creation and little to no benefit for Indianapolis residents. Furthermore, this data center is already receiving tax deductions through federal and state funding.

It's also important to note that AES is the sole provider of electricity for Indianapolis. Both personally and in my business, I have faced repeated issues with their billing system. For example, we had rental properties that went unbilled for utilities for six months, only to later receive surprise bills with excessive amounts and late fees—fees that arose solely because AES had failed to bill us properly in the first place.

A company that underperforms should not be rewarded with rate increases at the expense of hardworking families. I urge you to reject this proposal and instead prioritize infrastructure projects that directly benefit the Indianapolis community.

Thank you for considering my comments.

Sincerely,
Jordan Bond

To whom it may concern,

I am very opposed to the proposed increase in AES rates to residential customers. Hoosier families, already struggling under rising prices and other necessities are not in a position to shoulder this burden.

AES's most recent financials show AES has the capital and income to cover the improvements needed. Moreover, AES's most significant customers are enormous, very profitable, tech companies that can better shoulder the burden, and, due to their ambitious plans for data centers, have more to gain from these improvements.

Please make the right choice and do not allow AES to damage Hoosiers's wallets further when there are better options available.

Dear AES CEO, AES board of directors, trustees, etc & to any others whom it may concern,

I recently attended a public hearing, during which I witnessed something truly impressive in this current climate of political division and disagreement. Instead of quoting a litany of facts and figures that a number of my fellow citizens have already and eloquently done, I felt compelled to share a more impressionistic observation:

With your proposed rate increase, you have stumbled onto a topic that has a unifying impact on a large swath of citizens! Can you imagine that happening in this day and age? For a short blissful stretch during the public hearing, the economic status, formal education, race, gender, political leanings - none of these things mattered! We were united! We were all angry and upset about the same thing!

So I would say that a hearty congratulations is in order.

Your proposed rate increase is such a disgustingly money hungry extension of your corporate greed, that it has reminded me how it feels to be proud to stand united among my fellow citizens and neighbors.

Good job!

(and just in case there is a misinterpretation of the irony above, let me be clear: You don't need more money from your customers that are absolutely forced to be your customers to a legalized regional monopoly. If you need more money, take it from the salary of the CEO. Give me a friggin break...)

Regards,

Joshua Silbert

Comments: Im sure the rate increase is needed but I worry about being able to afford my bills. I am a single mom of 3, currently due with number 4 next month. I work a full time job and can barely afford everything the way it is. I feel like doing such a high rate increase so quick shouldn't be done. I feel like doing smaller increases over a longer period of time would be better because I am sure it is needed. But it does also make me wonder or concerned about what is going to increase next if this is approved, water, gas, etc. that is then going to hike up all the other bills too.

Type of Inquiry: Case Comment
Comments: As a residential customer who has already felt the impact of the 2024 rate hike, I am opposed to another rate hike for AES.

AES is a FOR PROFIT entity with massive C-suite salaries. If margins are tight, they should trim their overhead and stop paying overinflated compensation packages. Their shareholders enjoy a 5% annual dividend yield. Why is my utility publicly traded when it is a PUBLIC utility?

If this new request is approved as filed, AES monthly bills will increase by $30.32 by January 2027. This is on top of the $9/monthly increase I have already absorbed in 2025.

If AES is needs to address an increase in business and commercial energy demand, those customers should be footing the bill, not the residential customers. And when those business and commercial customers whine that they will have to increase the cost of their products, tell them to do it! If a consumer wants to buy their product, the will do so. Let the free market tell them if its worth it. Don't make residential customers subsidize these companies and data centers. We as consumers can make a choice to purchase products.

Officer of Utility Consumer Counselor,

I am asking you to vote "No" to a rate increase for AES.

Everyone is well aware of the price increases for
gas
groceries
healthcare costs
water bill
sewer bill
property taxes
over-the-counter medications
everyday needed amenities
car maintenance
car repairs for driving on the unkept roads in Indianapolis
and the lists go on.
To increase the utility prices all at once will be a HUGE hit for all households. Unfortunately, the future story of countless homeowners will be to make the decision between medications, groceries, gas and other necessary amenities for daily living or pay the AES bill this month. If there is a true need to increase AES prices, many are asking why was this not considered years ago and increased in small amounts over the years? These are a few reasons I am asking you to vote "No" to a rate increase for AES. Thank you for your time reading my email and considering voting for what is at the best interest for all AES customers.

Kind regards,
Karen

Type of Inquiry: Case Comment
Comments: I am writing to let you know that it would not be a good idea to let them raise our rates, as of November 2023 the competency of this entity is awful. At that time I was on the budget plan, paying a set rate with July being my reconciliation month. However, I received an email telling me that my budget amount was going up over a hundred dollars a month and that I (at that time) owed $454.00. Also, they charged my bank account twice for one month. I promptly stop my auto pay and called them and let them know that was incorrect. I have had trouble with my bill for over year. I to this day, watch what is being taken from my account with this company. Then to top that off, I have live in my home for over 34 years and in the last six months I have had more outages, than in the last 33 and a half years combined. When I called to let them know what the trouble was they sent someone out with out letting me know so that I could be there to explain the issue, then when they couldn't figure it out told me I needed to contact an electrician when it is clearly a problem on their end. As you can see I am very unhappy with how this company has been run for the last two years and they really shouldn't be rewarded for their lack of good stewardship with the money that the public is paying to have such a bad service. Perhaps, we should be allowed to have other companies come in and offer us power. I was under the impression that monopolies were illegal.
Thank you,
K

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To Whom it May Concern:

I am an AES customer in Indianapolis. This correspondence is in response to the AES request to increase rates per IURC Case Number 46258.

I understand our rates are already set to increase 6% in 2025 to offset several approved projects including the Pike County Battery Energy Storage Solution, Petersburg Energy Center and grid improvements forecasted to be complete through 2026.

The rate increase requested will increase our rates an additional 13.5% by January 2027 all to facilitate the operation of large scale and large profit data centers in central Indiana.

Spare me the argument that these data centers will create jobs. The job creation is during construction and after that the additional jobs are meager, to say the least. Please stop lying and assuming the general public are idiots.

I see no benefit to regular people like me and my neighbors for paying these additional rates. AES states it will improve our service but with every promise of improved service for additional fees, we see absolutely no benefit.

Stop with the socialize the cost, privatize the profits approach. It's unfair that major concessions are made to big business at the expense of the taxpaying citizens. Make Amazon, Meta, Google, Microsoft and all the other big electricity hogs pay for the improvements to infrastructure needed to facilitate the operation of their extremely profitable facilities. They are making the huge profits while the working class who are struggling to make ends meet pay their way with no return.

Thank you for your time.

Katrina L. Laflin, Customer

Good evening,

My name is Kristie Krone, and I am a City Councilor for District 6 inside the City Of Lawrence. I am also an AES customer. I am writing you tonight to tell you that I oppose the proposed AES rate hikes.
You keep saying things that the cost of doing business is rising so quickly, but I know that new data centers are the real reason utility costs are going up. As companies like Google and Meta put billions into data centers across the country, it's raising electricity bills. While they're making record profits, the rest of us are forced to pay for it. This is wrong and it's unjust, and you know it.

Kristie Krone
District 6 City Of Lawrence common Councilor

Respectfully,
1. How much of this rate increase is as a result of these new builds of massive data centers (albeit energy hogs) that are evident in several areas of IN and the donut states.

2. How much are paying customers carrying derelict corporate and residential accounts?

3. Why does my electric routinely go out without redolution? Older neighborhoods are vastly neglected in favor of corporations yet homeowners continue to bear more of the "infrastructure updates" needed. It seems corporations are the entities pushing for more energy whereas homeowners essentially want the electic to their homes to faihfully WORK!

Sincerely,
KSRamey

Type of Inquiry: Case Comment
Comments: I oppose the rate increase that AES is proposing.

As a controller specializing in accounting, I note that AES Corporation reported roughly $1.68 billion in net income on approximately $12.28 billion in revenue in 2024. That equates to a profit margin of around 13–14%, or even conservatively 8–10%, yet the utility is still seeking to raise consumer rates by 10.1%, which would cost customers over $30 extra per month. In my view, the company is financially healthy and can absorb this impact without placing further strain on households.

AES currently earns about 9.9% ROE and is requesting an increase to 10.7%. That is above what many regulators across the country consider reasonable for investor-owned utilities, especially when customers are struggling with affordability.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,

I am an AES customer for my home and business and received emails that AES is requesting a rate review to take into effect in 2026 & 2027. They just had an increase last year in 2024. How can the government support continual increases to a monopoly? If we had the option of another company then at least we could shop around, however that does not exist. I find the continuous increases in utilities will increase the hardship on hard working citizens, especially those that live check to check.

Please do not approve the rate increase. Feel free to reach out if you have any questions.

Comments: AES has been terrible with their billing. We received our regular bill in January 2025, but we were not billed again until May. I called them several times to ask about billing, and they simply encouraged me to make a payment without being billed. When the bill came in May, it was for five months. We've also had brownouts and spikes that have destroyed thousands of dollars worth of our appliances. They broke two a/c units and two microwave ovens. Now, they want to increase the rate while the CEO already brings home 13 million dollars each year. The corruption needs to be addressed.

Indianapolis, IN 46204

Cause # 46258

To Whom it May Concern,

With a potential AES rate increase requested at nearly 14%, please consider the following before deciding on a rate increase.

According to Marion County 2024 stats:

- 36% of the population of the County is 45 years and older

- 14% of the population is 65 and older

Seniors have no way to adjust fixed income to continually rising rates. It would make sense for AES to offer
a monthly bill discount for those 62 and above, as that is the age at when most seniors retire. My entire community
of 93 residential owners are 55 and above. There are **many** senior neighborhoods in the south of Indianapolis.

Also, one week is not enough time to make contact regarding rate increases. I just heard about this in a news article today
with the first meeting tonight.

I appreciate your attention the this matter.

Lisa McCarthy

I am a long-standing customer in the 46241 area. My electric is through AES. I am not only speaking for my house hold but my mother in-law that lives next door and pretty sure it's safe to say for anyone else that pays an electric bill every month. This rate hike isn't necessary for the customer's service, this is about big corp companies putting in data centers here in Indianapolis . This in no way benefits the customers of AES it hurts us! We will be used to subsidize the cost of these centers by paying more on our monthly bills! That is wrong on every level! The email that went out to customers to give a heads up on the price hikes and saying that it's to better serve us is a blatant lie! Word is getting out and will continue to do so! Hurting customers I wouldn't think is a great trade-off. There are people that can barely afford their bills now that live on a budget...you know like Social Security....that is now under threat?!?!? This is not a good look or a good move, especially in the current status of our country. WE the customers are NOT OK with this!

I attended the meeting and agree with everything brought up.

This is a travesty, I could understand if the last increase changed anything, the only thing it did was take them from a loss of 182 million net loss in 2023 to 698 million net income gain in 2024.

Our service has not gotten better in our area, we are not out 12 to 24 hours we are out and average of 3 to 7 days. I know of 8 to 10 people alone who in the last 3 years have added whole house generators, tired of throwing away food. From Olney to Allisonville road, these people are still on wells and septic. So when we lose power they have no water, they cannot flush toilets but because of the way AES broke up our area we have small pockets of people without electric we are always the last community to get electric every outage. One example (in the last 4 years) year we had 30 plus people out I went to 3 different crews told them no trees down finally 7th day got a manager driving past, it was a fuse blown!!! 7 days!!

Yes, we are angry that they are more concerned about their profits and stock holders then the people they are suppose to help. Again this is just unacceptable and we the people in Indiana deserve better.

Good afternoon,
im writing in hopes that this committee turns down AES's request for a rate increase,
me and my husband are disabled , and live in a 3 bedroom mobile home in Decatur township.
we only use 1 room which is our bedroom. for the past 4 months i have been on the phone with AES because they have charged us $499 , $492 , and $496 for each month. but all of a sudden after they found "no issues" my electric bill went down to $115.00 . we made no changes.
i kept asking them to check our meter because they just put new ones in and they refused the first 3 times then when i finally was able to get someone out here they said that the meter was working correctly. i believe they were reading the wrong meter.
there is no help to pay this. our bill as of today is $ 1,389.00 .
there are several thousands of people everyday in this city struggling to just pay for food and rent and utilities. giving this greedy corporation will cause all of us to not have power, because we will not be able to pay. we cant afford it now let alone another rate increase.
they want it for the storm repairs, well we already pay for that in the last 9 increases you have allowed!
without utilities , there is no heat, no air-conditioning, no fridge to keep the food they can afford from going bad.
there will be people dying from not having the essentials (heat,air,food) these lives will fall on you and them!
DO NOT ALLOW GREESY CORPERATIONS that do not know how to manage money take advantage of the poor people.

Utilities: AES (Cause Number 46258)
Type of Inquiry: Case Comment
Comments: I am an AES customer. I would like to comment on the AES request to increase rates, both for the flat connection charge and usage charges. (Cause Number 46258) I recently attended one of the hearings about this issue. I oppose any rate increases or profit margin increases for AES. Access to electrical power is a necessity. As the public does not have an alternative to AES, the public interest in access to affordable power should always be the first priority. Many people in this area simply cannot afford further increases in their utility bills. With the frequent outages in recent times, many people, including myself, have lost significant amounts of money when our groceries had to be discarded. AES already is making large profits while outages, possibly due to poor maintenance, have increased. Any increases due to corporate needs for places such as data centers etc. should not be passed on to the public. AES investors receive one of the highest rates of return for utilities apparently. They need to pay for the coal ash mess that the utility caused. Those costs should not be passed onto the public. It was suggested at the hearing that there be an audit of AES to provide transparency about where past rate increases have been used. This seems like a good idea especially because AES received a rate increase less than 2 years ago. Please put the public first in any considerations and reject the requested rate hike.

Utilities: Cause No. 46258
Type of Inquiry: Case Comment
Comments: Public Comment on AES Indiana Cause No. 46258

To the Indiana Utility Regulatory Commission:

We are writing to express our strong opposition to AES Indiana's request for yet another rate increase under Cause No. 46258. As a resident and ratepayer, we believe this proposal is both unreasonable and harmful to customers—especially at a time when many households are already burdened by high utility costs and a rising cost of living.

AES Indiana has recently implemented a rate increase, and it is difficult to understand how another hike can be justified so soon. While the utility may argue that additional funds are necessary for infrastructure or modernization, these investments should not come at the repeated and disproportionate expense of everyday customers. Many of us are already struggling to afford basic needs, and electricity is not a luxury—it is a necessity.

Furthermore, transparency around how previous increases have been used remains limited. Before any further rate hikes are approved, AES should be required to demonstrate real accountability for how ratepayer dollars have been spent and show that they are pursuing cost savings and efficiencies within their own operations first.

Approving another rate increase sends the message that utilities can continue passing costs to consumers without adequately managing their own financial practices or considering affordability. I urge the Commission to stand with the people you represent and deny AES Indiana's request.

Sincerely,
Mark and Susan Martin

Dear Counselor Bill Fine,

Subject: Urgent Opposition to AES Indiana's Proposed $30/Month Rate Increase

Dear AES Indiana,

I am writing to express strong opposition to your proposed $30/month electric rate increase, as outlined in Cause Number 46258, which would significantly burden Central Indiana households by January 2027. This request follows a series of challenges for AES customers, including prolonged outages in 2023 and 2025, a problematic 2024 billing system rollout that led to widespread overcharges, and a recent $9/month rate hike approved in April 2024.

Your proposal to increase profits by 60% to a 10.7% return on equity—already the highest among Indiana's investor-owned utilities at 9.9%—is unjustifiable. Additionally, raising the fixed charge from $17 to $20, maintaining regressive declining block rates, and disproportionately burdening residential customers to subsidize large corporations are unacceptable measures that prioritize shareholder interests over community welfare.

Most concerning is the lack of support for vulnerable households. With over one-third of Marion County households at or near poverty and potential cuts to the LIHEAP program, this rate hike would exacerbate financial strain for those least equipped to bear it.

Regards,
Mark Paschal

Utilities: AES Rate Increase IURC Cause No. 46258
Type of Inquiry: Case Comment
Comments: I attended the field hearing at the Pike facility 6450 Rodebaugh Rd on 8/25/2025 regarding proposed rate increases. I agree with all of the comments and concerns that were expressed. I am a widow on a fixed income, but have to supplement my monthly bills by working a part time job to make ends meet. I am very conservative on how much electricity I use. You can tell that by my reports that I get every month from my having an Ecobee thermostat. I have unplugged all items that I am not using as to not waste electricity, not only because of my monthly bill, but because I do not waste electricity period. I live by myself. I do not have cable, only antenna TV and I rarely even turn on my TV at all! I like to read. I have never been late on a bill. I am a responsible customer who takes pride in paying all of my bills on time. Also, these data centers are just not a good idea at all. I do not feel like we should be made to pay for this ridiculous pay increase rate to cover that. They will waste our electricity, water and our resources that we should be conserving anyway. PLEASE do not approve these rate increases. The CEO's do not live a life like most consumers trying to get by and having the basics to keep a roof over our heads and maintain a tight budget. I would not be wasteful even IF I were a millionaire. It's just wrong. Thank you for listening.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I am a resident of Marion County, Indiana, and am responding to the proposed rate increases in 2026 and 2027 by our service provider, AES.
My understanding is that AES has requested to raise consumer interest electricity rates to by $12/month on average in 2026 and $9/month on average in 2027 for an average increase of $21/month. While this may not seem like a significant amount to many, to a retiree on limited income, coupled with increases in property taxes (due to assessed values), food, and other utilities, this is considerable. These proposed rate increases will total $252/year by 2027 over 2025 rates. This increase is on top of the average $9/month hike in 2024.

The proposed rate increases by AES equate to about **15%** (2026 over 2025) and **10%** (2027 over 2026)
In the meantime, Social Security (COLA) checks have increased on average, 2024 - 2025, **3.2% and 2.5**%, respectively - averaging 2.85% over that time frame.

Please review the rate proposal appropriately and consider Indiana residents and the impact it will have on our living conditions and ability to support other community businesses and overall tax revenues.

Hello,

This is a plea to the Indiana Utility Regulatory Commission to **deny the rate increase** request by AES. As summers get hotter each year, it's becoming more expensive to afford keeping my home at a livable temperature.

A 20% rate increase is absurd for a utility. With improving management technology and renewable energy sources becoming more widely available/favorable, there have to be other ways for AES to combat rising costs.

Please help Hoosiers continue to live safely and comfortably in Indianapolis and around the state.

Best,
Mary Jo Easley

Mary Mildenberg

Indianapolis, IN 46201

AES Indiana Customer

Dear OUCC Team,

I am writing to express my strong opposition to the proposed rate increase by AES Indiana. As a residential customer in Indianapolis, I am extremely concerned about the financial burden this rate hike would place on my household.

Electricity is an essential service, and many families are already struggling to keep up with inflation and other rising costs. A significant increase in utility rates—particularly at a time when so many people are still recovering financially—will only deepen that hardship.

I understand that utilities must maintain infrastructure and invest in service improvements, but I do not believe AES has made a compelling case for shifting more of those costs onto customers. I am also concerned about the transparency of how AES is using its current revenue and whether cost-saving measures are being considered before asking consumers to pay more.

If approved, this rate increase could force many residents to make difficult choices between energy bills and other essentials such as food, medication, and housing. I urge the OUCC to votee against this proposed increase and to demand that AES present a more responsible and consumer-focused plan.

Thank you for considering my comments as part of the public record. I trust that the OUCC will continue to stand up for the interests of Indiana consumers.

Sincerely,
Mary Mildenberg

Hello,

I'm writing to urge the Utility Regulatory Commission to say no to any and all rate increases from AES. I am an AES customer and these rate hikes only serve to further squeeze working families who are struggling. Please prioritize working families before shareholders--electricity is a public utility and should be treated as such.

According to Mirror Indy, "Customers might also see a price hike as AES looks to build new fossil fuel generators. One of those generators could serve a proposed data center in Franklin Township." Hoosiers don't want data centers wasting and polluting our water, land, and air while also increasing our costs. If any data center related cases come before the Utility Regulatory Commission, I urge the commission to recognize the financial and environmental cost and say no.

Thank you,

Matt Buchanan

Type of Inquiry: Case Comment
Comments: Comment on case 46258: AES Indiana should not be permitted to increase prices in both 2026 and 2027. Indiana consumers are already hurting after the rate increase that went into effect this year to raise an estimated $71 million in additional revenue. The proposed increases would be more than double the estimated increase that has already gone into effect, with few expected benefits for consumers. Furthermore, there is already 6% rate hike that will be going into effect in 2026 due to previously approved projects, increasing prices for consumers more than 20% since 2024. AES argues that their overhead costs have increased, but this is much more true for consumers who cannot get energy from other public utilities and must rely on the IURC and OUCC to protect us from their monopolistic tendency towards putting profits over the needs of Hoosiers.

To whom it may concern,

I am writing to express my objection to AES Indiana's proposed rate increase in two phases. Phase 1: estimated 7.5% increase 2nd quarter 2026 and Phase 2: estimated 6% increase in 2027. These increases will be on top of already approved projects for grid improvements, Battery Storage System in Pike County, and Energy Center in Petersburg. The combined rate hikes with these already approved increases will likely result in a nearly 20% rate increase for customers.

Utilities are already at record highs and customers have little or no option in their selection of electric providers. Please take into consideration most people are already experiencing significant increases for essentials and increased cost to customers will result in additional hardship.

My name is Michele Burner, and I live in Camby, IN.

Best regards,

Michele Burner

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Good Evening,

I am reaching out to share my thoughts on the proposal that AES Indiana wants to increase electricity prices. This summer has been a lot when it comes to electricity prices. I live in a two bedroom townhouse less than 1,000 square feet with my toddler. I have been consistently paying over $200 each month for the entire summer. I turn lights off and use appliances first thing in the morning or at night and my bills are ridiculously high.

AES Indiana needs to understand that electricity shouldn't be treated like a luxury. It is a necessity for everyday living. Companies shouldn't mistreat their customers with continuous high price increases because they they are telling their customers you don't matter. This is a sign of corporate greed. So many assistance programs are being cut especially ones to help pay for electricity so I find it interesting that AES knows all this. They know we are living in times where we have to choose between buying a pack of chicken or buying a pack of diapers. We are STRUGGLING and AES Indiana solution is to ignore the everyday worker so that tech companies have it easy. Companies are already having it easy. When are Hoosiers going to get a break? AES Indiana needs to acknowledge the fact that Hoosiers are struggling financially and that raising prices on NECESSITIES is not a solution. It is a disrespectful and greedy move.

Do not pass this proposal. This will hurt everyone but especially those who are barely getting it by like myself. I shouldn't have to feel like I have to live in the dark in my own home in order to afford my electric bill.

Thank you for your time and reading my testimony,

Michelle

Type of Inquiry: General Inquiry
Comments: The AES rate hike will put unnecessary pressure on the already struggling citizens of indianapolis. AES is already a profitable company and has a monopoly on indianapolis energy. The natural force of competition which drives prices down is not present and constant rate hikes are making it difficult for people to pay their bills. AES is under pressure to increase revenue as their stock is at an all time low. While their year over year revenue fell drastically it is not because of resident defaults. There are other ways for them to please investors that doesn't involve raising rates. The citizens of indianapolis shouldn't be punished as a result of corporate mismanagement.

Dear OUCC,

Please do not approve the rate increase for ratepayers
The customer service at AES is horrible. I experienced so many issues with their billing systems. I was unable to log on to my account. I would get an error message stating that I did not have an account. They could not tell me over the phone how much my bill was for. I am a widow and I am living off of one income, so I went to Kroger to pay something to keep from having a huge bill that I would not be able to afford. I had receipts for the payments that I made. These issues went on for months before they could tell me how much my bill was. It was ridiculous!!! Then when they got their system up and running, I got a $400.00 bill for one month. I thought it was outrageous. But I paid, it, because what other choice did I have, my house is totally electric. We don't get to choose our electric company, but OUCC, you have the power in your hands to say **"NO"** to the rate increase. With the increase of gasoline, groceries, medications, people are struggling to survive. Companies are not increasing salaries to match the high cost of living.

Why should ratepayers continue to pay enormous salaries and bonuses for AES employees and executives?

Please vote NO, to an AES rate increase.

Thanks
Pat Canady

Case Description: Regarding Case Number: 46258

This complaint is made on my behalf, Nakidra Taylor.

I think it would be a disservice to the community to increase utility rates again. Utilities are already making the cost of living unaffordable for middle and low class community members. Inflation is hitting everything except the middle and lower classes pay. Increasing utility costs AGAIN is only making the rich richer, on the backs of the lower class. Are our lawmakers moral compasses and duty to humanity nonexistent? I currently am on a payment arrangement that I can barely afford and one missed payment means that my son and I will be without electricity in a fully electric apartment. But not only that, I will incur fees due to not being able to afford the utility rates as they are. Everyone knows that situations like this create a cycle that is almost impossible to end. We are always taught about the “American Dream”, but how can anyone achieve this dream if basic necessities like electricity are virtually unattainable? I urge decision makers to consider the middle and lower classes struggles compared to corporate struggles. Increasing energy rates will be the deciding factor of the quality of life for middle class and lower class citizens. And we all know that the quality will not be one that any of the decision makers would even dream to live.

Natalie Hoover
Indianapolis, IN 46219
Cause No. 46258

To Whom It May Concern,

I am writing to voice my opposition to the requested AES rate increase of approximately $30/month for the average household, and to urge you to deny their request.

The cost of everything around us is increasing. AES already has two rate hikes approved and set to be imposed, the initial increase in the second quarter of 2026, followed shortly there after by the second increase in January of 2027. How audacious of them to ask for another increase before the first two occur.

The service I receive as an AES customer is sub-par. Bills keep going up, and we see nothing in return for being charged more and more money. This year alone I have had to replace my entire refrigerator and freezer full of food three times due to power outages that lasted longer than it is safe to keep food unrefrigerated. That's $1200 I had to spend due to AES' failure to provide reliable service.

AES made **$698 Million** in profit last year on the backs of their customers who have no other options. Utilities are monopolies, and required to live. These rate hikes are unnecessary when the company profited almost $700 million dollars last year, and citizens can't afford basic necessities. These increases hurt everyone except AES. People already can't afford basic necessities, with the exorbitant cost of rent, food, gas, and every day items. AES should look through their budget and see where they can cut costs, possibly starting with the $13 million dollar compensation package or the $2.5 million dollar bonus the CEO of AES received in 2024.

While AES won't admit it, we know this latest rate increase request is to subsidize the Google Data Center that is being pushed through against the objections of the citizens in Franklin Township, not just "vegetation removal". The citizens should not be on the hook for the cost

of this data center, and vegetation removal doesn't justify the cost for a $30 a month per customer increase.

Please reject AES' request for a subsequent rate increase.

Thank You for Your Time,

Natalie J Hoover

To Whom It May Concern,

I am writing to voice my opposition to the requested AES rate hike of approximately $30/month for the "average user", and to urge you to decline their request.

The cost of everything is increasing. AES already has two rate hikes approved and set to be imposed, the initial hike in the second quarter of 2026, followed shortly there after in January of 2027. How GREEDY is it of them to ask for yet another hike before the first two occur?

The service I receive as an AES customer is sub-par. Bills keep going up, and we see nothing in return for being bilked out of more and more money. This year alone I have had to replace my entire refrigerator and freezer full of food THREE TIMES due to power outages that lasted longer than it is safe to keep food unrefrigerated. And one of those outages passed the 24 hour mark for me. There were customers that didn't have power for 5 days!

AES made **$698 Million** in profit last year on the backs of their customers who have no other options. Utilities are monopolies. These rate hikes are unnecessary when the company profited almost $700 million dollars last year, and citizens can't afford basic necessities. These increases hurt everyone except AES. People already can't afford to pay rent with the exorbitant amount of rent, food, gas, and every day items.

While AES won't admit it, we know this latest rate increase request is to subsidize the Google Data Center that is being pushed through against the objections of the citizens in Franklin Township. The citizens should not be on the hook for the cost of this data center! Make Google pay for their own project, the definitely have the money, and we working class citizens DO NOT!

Please REJECT AES's REQUEST FOR A RATE HIKE!

Thank You for Your Time,

Natalie J Hoover

Hello
I am writing you on behalf of myself and my mother.
My mother Chloe Newman lives at 1926 N Linwood Ave, Indpls, 46218
She is 85 years old and living on a social security money. Her budget leaves no room for rate hikes. Everything she has to pay for has gone up considerable especially groceries and Insurance.
I have had to help her out for a few months due to not enough Social Security money to pay all her bills. I finally got her back on budget with AES but if she falls behind again, they will kick her off.
She has gone all summer not turning on her AC because she doesn't want her electric bill to go up.
Its very sad someone 85 years old has to live in the sweltering heat we had this summer because she cannot afford for her electric bill to go up.
And because of the area she lives in, she can not leave the windows open at night to get a breeze in fear of a break in and being robbed or worse.
She know how tight her budget is.

I, Jacqi Newman, live at 970 N Gray St, Indpls 46201.
I am on budget but live check to check with very little wiggle room for rate hikes with what I make.
And when I have had to help my mother out with groceries or her bills, I have nothing left to save for my future.
Two years ago, I had to move to this not so safe area for cheaper rent when my landlord wanted to raise my rent from $850 to $1200.
We are constantly having power outages in my area, but you never see a refund on our bill for lack of service. Why?

We both have cut all non necessary things out of our life just to be able to have a roof over our heads and food in our stomach.

Please find another way to make your money instead of taking from the poor.

Jacqi Newman

Good afternoon-
I am strongly opposed to rate increases by AES.
We can count on losing power with most storms now, which costs money in time, food loss, productivity etc. for citizens and can be dangerous for vulnerable individuals in extreme
temperatures. Our neighborhood power outage last week did not even show up on their map despite multiple reporting from myself and my neighbors. They also do not maintain the easements properly in terms of vegetation trimming on the Northside around power lines.
AES needs to commit contractually to improving infrastructure before they raise rates.
They also need to be responsible for reimbursing citizens /being fined if we don't have access to power due to their negligence since there is no other option and they have no consequences. This is a ridiculous monopoly. When it was under the name IPL my power went out 1 time. Now it goes out with any kind of wind speed.
Our neighbors to the North of Indy don't have this problem. I lived in Florida and never lost power even during hurricane season unless high category so I know it can be addressed. We have a surplus in our state so why are our officials not mandating change from this horrible company?
Thank you.

Comments: Regarding the AES rate hike-
I live off 72 and Allisonville . I work from home and our neighborhood loses power on a monthly basis. Let me stress this point- I live in the city of Indianapolis. I am a Marion County resident and my neighborhood loses power on a regular basis. As a work- from -home employee it puts my livelihood at risk each time the power goes out. The majority of the time we lose power it is not weather related, it's because of AES's poor service and infrastructure. I've never experienced these outages when I was living in the nearby suburbs. This is a safety issue, an employment issue and a quality of life issue. It's insane they think they can hike our rates up for this garbage service.

Comments: AES is asking for a 13.5% increase and providing us with vague justification. Increasing labor costs and inflation, for tree trimming and outage repairs could be remedied burying power lines. They are spending millions putting up ever taller poles. Electricity has been delivered this way for over 100 years. Why are they not investing in methods to deliver electricity that will reduce the need for tree trimming and costs to deal with downed power lines? I support investing in clean energy, but again only a vague mention. I understand increased costs, but I cannot support this rate increase until AES is forthcoming with specifics on a plan to address what will be ever rising costs (tree trimming) and how this money is to be spent on all of the other ares that they vaguely mention (objectives if specific projects, anticipated project completion, etc.) WE DESERVE TRANSPARENCY - UNTIL THEN I DO NOT SUPPORT THIS INCREASE WHICH WILL PUSH MANY HOOSIERS INTO EXTREME FINANCIAL DIFFICULTIES.

My name is Patrick. My wife and I rent a 2 story house in Muncie, Indiana 47303. It is just the 2 of us. We don't use a lot of lights or electricity period. 90% of the time when we get home from work, we are in our bedroom watching TV from about 5p.m. to 8:30 p.m. Our bill runs approximately $250 a month and has seemed to get higher after they installed the "smart meter". AES wanting to raise rate when it is already hard for so many people especially with the way prices are already being raised on food, gas for vehicles and homes etc... is ridiculous. Most of us who aren't rich like them are already struggling. Maybe if the CEO and other corporate big wigs would take a pay cut then maybe they would know what it feels like. We(most AEP customers) are sick of all the utility companies constantly raising prices while our pay doesn't. My job gives a joke of a "cost of living" of up to 5% each year. Yet, AEP wants to raise price up to I think it said 13%. How does this equal out. Fight against the AEP price (gouging) hike. We as customers can't afford to keep paying for their mansions, yaghts and golf outings.

Thank you for listening and hopefully fighting for what's right.

Type of Inquiry: Case Comment
Comments: Hello, I'm contacting concerning the 13.5% proposed increase in utility bills by AES. I, and MANY others, struggle to pay their utility bills as is because all prices are on the rise and we can barely afford our basic needs. Raising utility bills would not only hurt the people of Indianapolis but would further increase the wages of CEOs of AES who clearly do not struggle to pay bills. This is a massive insult to the citizens of Indianapolis. I am a hard-working public school middle school English teacher who has to budget like crazy just to ensure all bills get paid and I have very little wiggle room. I should not have to worry about making "payment plans" each month just to be able to afford to have my heat on in the winter. This is pure blasphemy and I can tell you that NO ONE in Indiana supports this bill other than those CEOs benefiting from it. Do NOT support this proposed increase AT ALL.

Sincerely concerned,

Patty Haltom

Type of Inquiry: Case Comment
Comments: Cause number 46258
Hello, I am an AES Indiana customer doing my best to make ends meet and not waste electricity. My monthly kilowatt usage is around 400. I allow my home to reach 85º in the summer and 55º in the winter. My monthly bill is around $75. Other than rent, this is the largest monthly bill I have.

Of course I don't want to pay more — who does? If that was all it was about, I wouldn't take myself seriously either. But here are the reasons I oppose the proposed rate increase:
• AES operates as a monopoly in my area — their income is virtually guaranteed. Such a low-risk business should not require enormous profit margins to survive, so I would like to see AES' profit margin remain on par with that of other area utility companies.
• AES can trim executive-level salaries before increasing the price of their services. Wealth inequality is one of the biggest problems in American society today — this is moment where we can point this out and be part of a change.
• I am troubled by the trends of unregulated AI incorporation into every facet of our internet use, given the high environmental costs of the data centers require to power this. I oppose the building of new data centers, which may be part of AES' motivation to raise rates.

If rates are to be raised, I propose they not be raised on basic services to residents (first 1000kWh for example), but to only kick in at a certain level of usage by businesses and more affluent residents.

Thank you for your time,
Rachel Leigh

Comments: I am submitting a comment against the proposed rate hike, up to as much as 21% or $30 each month. As homeowners who have been able to improve their energy efficiency and have control over the temperatures we set, we are still faced with insurmountable bills. Most months our energy bill is more than half our utility budget, With some winter months even taking up our whole budget. This rate increase would make it continually difficult for our neighbors who make a fixed income, or minimum wage, to keep up with their bills. And as energy demands increase due to unseasonably warm / cold temperatures, people should not be facing the decision between heating or cooling their homes and being able to afford groceries. AES should prioritize the safety and efficiency of its current system to minimize outages before seeking to provide more profits to shareholders. Serve us, your customers, first.

Comments: Please do not allow AES to further increase prices for vulnerable Hoosiers already struggling with high utility costs. Another 13.5% increase is way too much, on top of the 6% increase already slated for 2026. Maybe to save money they should cut the $18 million in salary for their CEO. People do not get to choose their utility company or the necessity that is electricity, so allowing this utility monopoly to raise their prices makes basic necessities more of a burden for everyone, but especially people who were struggling to begin with.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Our monthly payments are being used for AES chosen partnerships and charities.
From the AES website:

"Arts & culture: Heightening the impact of arts and local culture in our communities. Customer needs: Enhancing the general quality of life for members of the communities in which we serve Economic development: Creating an engaged, vibrant, welcoming community that is seen as a great place to live and work. Education: Improving educational access and outcomes. Environment: Investing in sustainable initiatives that help to protect the environment. Also, the "Yvonne Perkins Legacy Fund" --This is Indiana only and doesn't include their sponsorships.

Yet a simple perusal of the Next Door app will reveal complaint after complaint by people who have received no bills for months, and are then billed for multiple months; who receive outrageous bills for excessive amounts when they have been away from

home and have everything electrical turned off for long periods of time; or who receive January bills that are always excessive, as though the company simply anticipates that they will be using extraordinary amounts of electricity for Christmas lighting.

Add to this the question of the fact that an increase from a few years ago was supposedly intended to create electric vehicle charging stations throughout the city. Where are these stations? What happened to that rate increase money? Why were customers not using electric vehicles required to pay for these EV stations that were never even manufactured?

Perhaps AES first needs to address problems of failed billing and overbilling before demanding another rate increase. Perhaps they as well need to end their participation in charities by using customer funding. AES customers should no longer endure excessive rates to support these ventures. AES customers can choose their own Community charities!

Please say "no" to additional rate hikes from AES in Indiana. While they may think a $21 rate hike is not onerous, they are not tracking that rates have *nearly doubled* in the past year for many homeowners, apartment renters, and businesses in Indiana.

A high summer bill for my downtown apartment used to be $120. This summer, with similar or less A/C use? $230-240.

These prices are not sustainable for consumers already struggling with higher grocery prices and inflation. Now is now the time for AES to push more on customers -- we have no choice of other provider. If they were to check any neighborhood message board, they'd find consumers are outraged. They need to read the room.

Please tell them "no" in this economic climate. The rest of us have to make do with what we have. They will also.

Subject: RICHARD TREPTOW - Comments on AES"s Proposed 13.5% Rate Increase
Date: Wednesday, August 13, 2025 10:23:39 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To: OUCC Consumer Services

I am one of AES' residential customers (details below), writing regarding AES's proposed 13.5% rate increase over two years.

While rate increases are necessary, those upon whom it falls must be intelligently decided.

If they fall upon the commercial sector, the impact can be passed on across that business's customer base or product lines without a heavy impact on any one entity.

If it falls upon residential customers, however, the impact can be devastating, **especially for 100% electric households** like my own. The following are my three most recent winter AES electric bills:

$437.04 due Jan. 21
$601.62 due Feb. 20
$428.33 due Mar. 21

The above bills were for my home with a geo-thermal heating/cooling system installed within the past three years, so it's not an old system. These bills are a high cost for a private homeowner, and a further significant increase not only may make continued home ownership difficult, but also it will decrease the value of the property upon resale.

I request, and advise, that the impact of any approved rate increase be allocated primarily to commercial businesses and not residential units. Thank you for your consideration of these comments.

Comments: I want you to deny AES request to increase our rates, again. All they do is keep hiking our prices and we get nothing for it. They have lots of service issues in Indy market. They make plenty of profit. TELL THEM NO. They are a monopoly and must be told NO regularly. They are greedy and play accounting games to make up costs that are not legit. That $17 CUSTOMER charge is a made up ripoff and they never should have been granted that. Take that away. So deny them their requested rate increase and PUNISH THEM by taking away their customer charge. Thats madeup bullshit. Mcdonalds doenst charge me some flat 'customer charge' for buying their products, electric companies should not either. We should pay for electricity used ONLY. Furthermore tell AES to start building small modular nuke reactors so we have plenty of clean safe power forever. Also data centers should be told if they come here that they can build their own modular nuke power plants and sell their surplus electric power direct to the public so we the people have some COMPETITION to choose from.

To whom it may concern,

I recently discovered that AES is using my payment money for personal causes. This is wrong. Below is a list I found on the AES website. There may be others. I am willing to pay for electricity services but not their causes or sponsorships. Please do what you can to stop the rate hike.

Thank you,
Ron Baier

PETITION OF INDIANAPOLIS POWER & LIGHT COMPANY D/B/A AES INDIANA ("AES INDIANA") FOR AUTHORITY TO INCREASE RATES AND CHARGES FOR ELECTRIC UTILITY SERVICE THROUGH A PHASE-IN RATE ADJUSTMENT; AND FOR APPROVAL OF RELATED RELIEF, INCLUDING (1) REVISED DEPRECIATION RATES, INCLUDING COST OF REMOVAL LESS SALVAGE AND UPDATED DEPRECIATION EXPENSE; (2) ACCOUNTING RELIEF, INCLUDING DEFERRALS AND AMORTIZATIONS, (3) INCLUSION OF CAPITAL INVESTMENT, (4) RATE ADJUSTMENT MECHANISM PROPOSALS, INCLUDING A NEW PROPERTY TAX RIDER, AND (5) NEW SCHEDULES OF RATES, RULES AND REGULATIONS FOR SERVICE.

AES Indiana Customer Comment for: 4011 E 34th Street, 46218

The rate increase is absolutely predatory. I am a disabled individual on a fixed income who is finding themself deciding between electricity and groceries. There are several RED FLAGS that catch my attention and I wonder if those flags have been addressed with the commission to protect their valued customers.
CEO 2024 Salary $1.2M but received double their salary in a $2.41M BONUS. How is a bonus double the amount of the base salary justifiable?!
AES Power Purchased is $66,769,000 a $15.67M amount less than the previous year at $82,736,000.
The 3-month net income is $15,763,000 while the 6-month net income is $34,311,000; more the twice the 3-month's numbers.
In 2025 AES Indiana is investing $395,277,000 which is $208,978,000 less than the previous year's investment of $604,255,000.
Service Cost is $2.13M which is $376K less than the previous year.
Capital Expenditures are $296,824,000 which is $241,046,000 less than the $537,870,000 the previous year.
Allowing AES to gouge the electric customers is outrageous. I petition that the rates are lowered and there is some sort of community outreach AES is financially responsible for in the state of Indiana.

Dear Counselor Bill Fine,

I strongly oppose another rate hike from AES.

According to the United Way, in Marion County alone, over 1 in 3 households live in or near poverty.

Too many struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does NOT deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Ryan Zumbahlen

IURC Cause No. 46258

To Whom It May Concern,

As an individual customer of AES, I am writing to share I am **against the rate hike**. I am relatively affluent and yet even I find my AES bills to be shockingly high this year. I cannot imagine how someone on a limited income is able to pay their current bills, let alone a future bill with such a significant rate hike.

In reviewing documents submitted by AES to the SEC, it appears the company feels hindered by the requirements of Indiana Statues and is hoping to utilize an Indiana rate hike to subsidize other divisions of the parent company. (See below) I do not agree with the way AES is managing Indiana and I hope the IURC opposes any rate hike.

Sincerely,

Sara B. Rubin

PDF Document - 2.6 MB

ACQUISITIONS

Crossvine — On May 16, 2025, the Company completed the acquisition of 100% of the membership interests in Crossvine Solar 1, LLC, which is developing an 85 MW solar generation facility and an 85 MW battery storage project in Indiana, for total consideration of $78 million. The nature of the assets acquired is largely intangible, consisting mainly of a project development intangible valued at $64 million. The transaction was accounted for as an asset acquisition of a variable interest entity that did not meet the definition of a business. Crossvine is reported in the Utilities SBU reportable segment.

Adjusted EBITDA, a non-GAAP measure, decreased $26 million, from $1,298 million to $1,272 million, for the six months ended June 30, 2025, mainly driven by higher prior year revenues from the monetization of the Warrior Run coal plant PPA and the sale of AES Brasil; partially offset by higher revenues from new projects placed in service at the Renewables SBU, higher retail margin under the 2024 Base Rate Order at AES Indiana, and better hydrology.

AES Indiana Rate Case Filing — On June 3, 2025, AES Indiana filed a petition with the IURC for authority to increase its basic rates and charges. If approved, AES Indiana's proposed revenue increase will be implemented in two phases: $85.4 million, or 4.5%, in 2026, and $107.5 million, or 5.6%, in 2027. A hearing on this petition is expected to be held in November 2025. We expect to receive an order from the IURC and place new rates into effect by the end of the second quarter of 2026.

On March 23, 2021, the U.S. District Court for the Southern District of Indiana approved and entered a judicial consent decree among AES Indiana, the United States on behalf of the Environmental Protection Agency (EPA), and the Indiana Department of Environmental Management ("IDEM"). The decree resolved allegations by EPA and IDEM that AES Indiana had violated the federal Clean Air Act ("CAA") at its Petersburg Station, which AES denies. Under the decree, AES Indiana agreed to certain emission limits and annual caps on NOx, SO 2 and PM emissions at the four Units at the station; paid a civil penalty of $1.525 million; retired Units 1 and 2, spent $325,000 on an environmentally beneficial project to preserve local, ecologically-significant lands (notice of completion of which was provided May 8, 2025); and will spend a total of $5 million on a further environmental mitigation project to build and operate a new, non-emitting source of generation at the site.

To whom it may concern,

Please don't allow AES to increase our electricity rates. We have more power outages than we've ever had before. The quality of service has not improved. Renewable energy is becoming more abundant and affordable, and I have a hard time understanding how this is not simply motivated by greed. Everything is more expensive including my house payment. Our wages are not keeping up with the increase in costs for food, housing, and utilities.

Please don't allow them to keep bleeding us dry. I have signed up for the green option and have been using it for the past 8 years. I don't think I should have to pay for increased costs of oil or coal as I try not to partake in the use of energy that destroys the environment we need to live in.

Thank you for your consideration.

Respectfully,
Savannah R. Montoya

Comments: My concern is for their rate hike for to have a more reliable service (storms/extreme weather, stronger infrastructure to reduce outages and speed of restoration. As in my job, I have certain expectations that I need to perform on an ongoing process to do my job. How is this not an on going process for AES to exceed their reliability to their customers to provide ways to keep service and reduce outages??? If I didn't find ways to do my job for efficiently and to streamline, I wouldn't have a job for very long. To save money, why are the homeowners not responsible for trimming the trees that were planted around/close to utility lines???? As a property owner, I am responsible in my neighborhood to make sure that my trees are trimmed and maintained so as to not cause harm/damage to my neighbors. That would be a HUGE savings to the city/utility to eliminate that responsibility and pass that on to the homeowner to maintain. Numerous friends, neighbors and co-workers are tired of the rate hike requests. Our jobs are capped at a ceiling and when we reach that cap, we are NO longer able to get a pay/cost of living increase. We have to pay for the additional increase in gas prices and car maintenance out of our pockets and drive to work for NO additional increase for the duration of our employment. If they had to work under these circumstances, they might reconsider their requests for more money and have to work within their budgets.

Type of Inquiry: Case Comment
Comments: This is regarding the proposed AES Indiana rate increase. Cause number is 46258. I am a resident of Marion County, AES customer, and these comments are on my own behalf. I am a residential customer with electric heat and water. I've been tracking my electric bill much more closely since the last rate increase in May 2024. Base rate increases seem to get the most headlines. However, riders/trackers have risen significantly on my monthly bills. Since January 2025, the average cost of riders on my monthly bills have been around 11%. Prior to the 2024 increase, I saw a document from the IURC that indicated these costs have traditionally been around 3%. That's a big increase that doesn't get discussed because it is basically hidden on the billing from AES. I think these riders/trackers need to be better delineated on customer bills (i.e. broken out as a line item for each rider with a description and cost) to bring more awareness of this billing practice. Also, there needs to be some transparency in how these riders will affect the projected 13.5% rate increases that AES is predicting. I don't see a need for base rates to be raised again if my experience with the increase in riders is true for other customers. Also, as an aside why is there IN sales tax on electricity? It should be treated as a necessity like food and not taxed. That might be one way to take the sting out of all these rate increases.

Comments: I absolutely object to any rate increases AES may request. I saw hundreds of families this past winter desperately looking forvl help because they were hit with impossibly ridiculously high heating bills like none I have ever seen. At a time many of us are still struggling to simply survive. I saw with their rate increase last year that the CEO of AES also had a substantial increase in his pay and benefits in 2024. I suspect all senior management enjoyed the same. Money that should have been going to pay what they are saying this increase is about. I suspect last years was pretty much identical. These people live in million dollar homes while we have more and more hardworking Hoosiers loosing everything they have because they can't keep up with greedy utility companies. They have us in a corner and they know it. Yet you all continue to allow these rate increases with us not seeing any improvement in the services one would expect of a power company. It just continues to go downhill. How much does the AES CEO need? Surely they are aware that there is a large number of households that, even with both parents working, often two or three different jobs, can't keep up with the costs to heat and/or cool and power their lights and appliances in their modest homes and apartments. Enough is enough. You need to say no and protect your most vulnerable Hoosiers. Our low income, disabled, veterans, and elderly citizens who have to decide what they are being forced to decide because of year after year of rate increases approved by you. Exactly what do you feel they need to forego? Is it not getting much needed prescription medications, groceries to feed even one elderly person on a fixed income, or skip their rent in order to pay a ridiculous amount of money for an essential need. The need to have electricity to light their house, keep perishables in a refrigerator, heat/cool their home, or even run a critical piece of medical equipment. Think about all that when you all sit in your nice homes and offices and decide yes or no to yet another rate increase for AES.

Type of Inquiry: Case Comment
Comments: AES Rates - cause number 46258. This comment is on behalf of myself and no other person. I write in strong opposition to the proposed 13.5% electricity rate increase slated for Q2 2026 and January 2027. With rising inflation, housing, and grocery costs, an additional $21/month, and potentially more, will significantly strain family budgets. Many households already face tough decisions between paying utility bills and buying essential supplies. Of particular concern is the proposed increase in fixed charges from $17 to $20 per month, which unfairly penalizes those who consume less and disproportionately burdens low income and fixed income households. The declining block rate structure is similarly regressive and discourages energy efficiency. While I understand the need for infrastructure investment, rate increases should be aligned with demonstrable improvements in reliability and efficiency. AES must prioritize consumer protections, including:
• Better bill assistance and payment plans for vulnerable customers.
• Clear accountability and transparency for how investment funds are used.
• Rate structures that reward, not penalize, energy conservation.

I implore the IURC to deny or significantly modify this increase and consider approaches that protect consumers while supporting necessary utility improvements. Please do right by the state of Indiana and it's already struggling Hoosiers.

Date: Friday, July 4, 2025 2:02:15 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear IURC Representative, Public Official, or "To Whom It May Concern",

I am writing to express my strong opposition to AES Indiana's latest request for a rate increase—an outrageous 13.5% hike that would actually amount to a 21% increase for Hoosiers when combined with previously approved increases. This would force already struggling families to pay an extra **$30 per month, or $360 per year**, on top of the relentless financial pressures of inflation, rising housing costs, and stagnant wages.

AES has made a habit of squeezing ratepayers. Just last year, they secured a $9.36/month increase after asking for $17.50. Now, they're back for more, despite the fact that Hoosiers are still paying off a **$1.2 billion system upgrade** approved in 2020—a project that included **seven years of built-in rate hikes**. By the time this new increase takes effect, customers will have endured a **27% cumulative increase** in recent years. Over the past decade, AES rates have already surged by **more than 34%**. When does it end?

Worse, these increases haven't translated into reliable service. After the 2023 hike, customers faced **billing disasters**: unexplained charges triple the normal amount, payments withdrawn up to **10 times without refunds**, and completed payments falsely marked as "missing." AES paused disconnections temporarily, but issues persist—and now they want even more money without fixing these basic failures.

AES claims inflation justifies this hike, but Hoosiers can't just demand more money to cover *their* rising costs. Unlike AES, we don't have a monopoly to fall back on. For families living paycheck to paycheck, seniors on fixed incomes, and workers whose wages haven't kept up, **$30 more per month means choosing between electricity, food, or medicine**.

I stand with Governor Braun's recent criticism of this request—but let's be clear: **20 years of Republican leadership** enabled these unchecked rate hikes. If the Governor truly cares about affordability, he should urge the IURC to reject this proposal outright.

I applaud the Indiana Black Legislative Caucus for demanding **public field hearings** on this issue, and I urge the OUCC and IURC to:

1. **Deny this unjustified increase** and hold AES accountable for its billing

failures.

2. **Cap future hikes** to prevent annual exploitation of ratepayers.
3. **Prioritize affordability** over shareholder profits.

Hoosiers aren't ATMs. Enough is enough.

Dear Sirs,

As a senior citizen on a fixed income, I have to ask as to when the IURC is going to start stopping these rate increases!
This is getting to be ridiculous. Your mandate to us citizens is to "allow for just and reasonable rates" ! This is getting out of hand. My social security does not go up 6% to 10% to allow me to keep up with these increases. Start holding these utilities accountable.

Maybe it's time we start raising hell with the governor to change you people out and maybe start electing these positions. Quite frankly you folks have screwed us for years. This is driving a lot of us into the poor house!!!!!

And Yes I am a customer of these damn people!.

Dear Sirs,

I would like to comment on the upcoming proposed rate increase for AES. I am a customer of AES in Mooresville Indiana. I have to say that "enough is enough". As a senior trying to get by on a fixed income it is getting harder and harder to make ends meet. If this proposed rate increase is enacted it will only exacerbate monthly expenditure issues for us seniors. I understand the need for utilities to make a profit to continue business but this is getting truly ridiculous. I certainly hope that the IURC finally steps up and states "NO" to this rate increase. I really can not remember when the last time was that the IURC really looked out for us consumers. Please do everything possible to stop this nonsense. It is definitely not fair for us residential customers to essentially subsidize the bills for businesses. It's time for businesses to pay their fair share for their electricity needs. From what I understand this rate increase will essentially be more for residential customers than for businesses thus allowing business customers to increase their bottom line while at the same time negatively impacting us residential consumers.
Thank-you.

Sincerely,

Terry L. Combs

My name is Toni Wilson.
I am a customer. My complaint is AES response & service time is extremely slow when electricity is out. The last big storm we had my lights stayed off for a day & 1/2. Some of my groceries spoiled in my fridge, AES didn't reimburse me for that.
I had to go & re-buy more groceries & that wasn't in my budget. My light bill is high in the winter & in the Summer it runs $60 to $70 &
I don't use my AC, because it bothers my joints. Times are hard & quite frankly ppl can't afford anything else going up. Please consider carefully when you all are considering a rate hike.
Thank you
Toni Wilson

Comments: I am writing in regards to “IURC Cause No. 46258.” There are many challenges in our city. I am involved with a non-profit and already have working mothers struggling to pay their utilities on top of their other living expenses. While I appreciate that there are needs for upgrades and work on the power grid, I am concerned that much of this is due to the additional factories and data centers that are being planned in the state. These are for profit companies who will require excessive amounts of energy and it seems that again, the poor and families just trying to get by are going to take the brunt of this increase. Has AES considered differing rates for for-profit companies vs those who are residential? Has there been consideration of charging those companies and particularly the data centers for the upgrades needed to facilitate their energy needs? $20 a month may not seem like a lot to many people, but I have several moms who end up with $200 a month to feed their family and pay for all other expenses beyond rent, phone, and utilities. For them, $20 extra a month or more is substantial.

Dear Counselor Bill Fine,

we went many days this year without power due to storms and lost hundreds of dollars in food due to lack of power from storms. It took days to restore power to us. My elderly grandparents, 8 month pregnant girlfriend and myself (with asthma) suffered for 4 days straight while AES said they was working on it while I witnessed them parked at nearby bars each night. This wasn't an isolated incident because it seems like 4 times a year we lose power and hundreds of dollars in groceries and have to start over in a poor household. I don't believe a rate increase is needed till AES figures out a way to better use what they currently have which seems to me, is poorly managed. A rate increase will just put us in debt more to a company that can't even handle a storm that lasted a hour and knocked out power to 120,000 AES customers that took calling in extra resources from out of state to get power restored. If they did half of what they say they do, it wouldn't be a reoccurring issue but they don't trim trees, they don't bury lines. They just do the bare minimum while jacking up monthly bills and claiming they need it to make improvements but stick to the tried-and-true of doing the bare minimum. I can't imagine how much money people lost in groceries this past power outage and for them to ask for more per bill, is a slap in the face to the kids and elderly who lost so much. Some people don't have money for bags of ice, coolers, or travel to crowded cooling centers that are far and few between. It took months for this household to recover on the food situation after losing everything. Please reject their proposal.

Respectfully,
Tyler hull

Hello,

My name is Tyler Oswald, I'm a Marion County resident and AES customer. I fiercely oppose the proposed rate hike requested by AES Indiana, which would raise utility bills for families across Indianapolis by 13.5%. None of us have any other utility choices in this area, if costs are too high for the company, other alternatives need to be explored other than raising the prices for consumers.

With already high cost of living, another rate increase could be devastating especially for seniors and families on fixed incomes.

Please consider alternatives and discuss them in a public forum as this affects everyone. We just can't afford an increase.

-Tyler

I want to reiterate Indianapolis City-County councillor Jesse Brown's comments that the OUCC has a duty to insure that AES residential ratepayers are not unduly burdened for generation, transmission, or infrastructure improvements required to serve additional commercial and industrial electric power consumers. This month our household invested $18K in an energy efficient heat pump (replacing a gas furnace and electric AC) despite rising costs per KWh because it's the right thing to do in terms of minimizing the environmental costs of our home heating and cooling. I do not appreciate that consumers like us pay more for generation, transmission, and infrastructure improvements that mostly serve mega-users such as data centers while we strive to minimize our own energy footprint. We would have also considered supplemental solar generation if IN had a fair net metering paradigm that didn't necessitate residential battery storage to reap the benefit of that investment. We are asking the OUCC to fairly distribute the costs of providing electricity to various constituent users or limit their own profit (ROE) to better align with the investments and values of ratepayers that are spending money to increase efficiency. Residential users that invest to increase efficiency should not be additionally required to subsidize industrial users. The costs of increased generation, transmission, and infrastructure should be borne by the users of that expanded generation and transmission capacity. Additional AES profit from added demand should be compensation enough without also raising AES' ROE.

Thank you,
Tyson Domer

Having just read the notice from AES that they are again asking for a rate hike I am begging you to not allow this to happen. AES is rate hiking me right out to my car to live. It is already so bad that it is difficult to pay my bill. I live in a very small one bedroom apartment and currently cannot use my furnace in the winter because the bill goes up to more than $300 a month. These kind of bills are difficult for a retired senior citizen. And there are many who live in my complex besides me. Please save us from this hardship.

Thank you,
Vicki Peavey

On behalf of all AES customers and Cause No. 46258, we are against this large rate hike. Until AES can provide a software program to support customers questions and proper billing, they should not receive a monetary increase at this time.

It took months of phone calls on my part to get an explananation regarding a missing documentation on my billing for 2024. I was told a manager would look into it only to find out weeks later, my online payment had been cancelled and I was now owing a late fee, I had nothing to do with the cancellation. I found out even later my case had been closed but was never notified with any explanation. There had also been a mistake on our budget billing in 2024 that had to be corrected.

The software change that AES started several years back has never been efficient to help customers. I feel sorry for the customer service representatives that want to help but cannot because they must send requests to managers who do not reapond.

During the time of my phone calls, I found out they had some wrong information linking someone else to our bill. And we were not the only customers that had mistakes in the billing.

How sad it was to hear that Wayne township customers were told the monetary assistance from the township had not been received but the check from Wayne township had cleared at the bank. How wasteful to send out notices using employee time and monetary funds.

We so appreciate the electric power we enjoy in our home and thank those workers on the front line when the power goes off. Their work needs to be supported by providing transparent information with AES customers.

Type of Inquiry: Case Comment
Comments: These rate increases are far too excessive. Let's take a look at some brief history of rate increases that have been imposed.
2019 - 2.8% rate increase for infrastructure needs of the grid
2020 - 0.44% increase for infrastructure needs
2022 - 12% temporary rate increase due to pandemic supply issues
2023 - 7.2% permanent rate increase due to inflation and infrastructure needs
Now - 13.5% rate increase to help with infrastructure needs and inflation

I think that AES is helping big companies like Google, Facebook, and Microsoft by covering the cost of grid upgrades needed for their Data Centers. That is why AES keeps asking for rate increases to help with Infrastructure needs. This cost should not be passed off the the citizens of Indianapolis. This is corrupt and wrong. Trillion Dollar companies have more than enough money to pay for these infrastructure upgrades themselves. I refuse to subsidize Artificial Intelligence and my neighbors do too. Vote to deny this rate increase.

Comments: Aes has a current profit margin of 9.9%. They just raised rates a year or 2 ago. People over profits. This isnt helping anyone if you give them the ok to raise the rates on people in Marion County. I feel that sometimes if Aes can donate to you all or give you side money you will do it. What happened to doing whats right for people.

Comments: I am a single woman basically living paycheck to paycheck. I have an all electric home. My bill in January was $372.00. I did not have my heat above 65 degrees. I live in the cold in the hopes I can afford to pay my bill once it arrives. I unplug everything in my home. I do not use unnecessary electricity and still cannot afford to heat my home. Part of my issue is probably equipment but I can't afford to replace the units either. If this company made any kind of profit last year, they DO NOT NEED TO RAISE OUR RATES!!! If they have "proposed projects" that might need additional funding then I recommend doing what we all have to do when we don't have enough money to cover the "proposed projects". DON'T DO THEM!!! If I could chose a different electric company, shop around for better rates, then maybe I'd have a chance but when you have no choice in the matter, at the very least, hear us when we say NO!!! NO!!! NO!!! We cannot afford your "IDEAS".

I wanted to state my opposition to proposal for rate increase almost 2 1/2 times what Aes received in 2024.
Aes had 698 million in net earnings and the greed to maintain continuous shareholders earnings in the name of storm damage is unacceptable.
I have many neighbors in current distress with the housing prices and already high utilities.
I ask that you make effort to have aes sustain their current service and hold off on any increase and review again in 2026.

Brad McKitrick

Comments: Proposed rate hike:
The proposed rate increases from AES over the next few years are completely out of line with what the citizens need. If they want to increase rates to improve service, that would be one thing. We regularly lose power for days even after small storms. Nothing is ever done to improve by burying lines or moving. They replace things in the exact same spot and hope for a different outcome. This utility has no need for massive rate increases with this level of poor service. Invest in clean energy, not keeping fossil fuels that harm our air. This is a ridiculous proposal.

Comments: The public deserves public hearings regarding the request for an increase by AES. I haven't seen any evidence that AES is being financially-responsible in ways that prevent the need for a rate hike. The amount of increase they're requesting is ridiculous, especially in this economic and political climate when people are losing their jobs at a frightening rate, mostly because of Federal and State legislative or executive order actions. AES should have to justify a rate hike to its customers. Thank you.

To whom I may concern,

Please do not raise the AES rates 13% higher. You (AES) already have a monopoly of services and will give Marion county citizens no choice but to cut their finances yet again in this economy. This is an unfair rate that is being proposed and our family firmly opposes it.

I completely disagree w rate increases. As a single mom with a graduate degree when having to take off work to help a sick kid last winter, I now have a disconnect notice and couldn't qualify for EAP b/c I had severance through beginning of Sept of 2024. My bill is 1400 and climbing and I cant catch up b/c I just lost my job due to budget issues w Title X clinic, and lack of federal funding. This is crazy and I am against the data centers and all of the greed involved with utilities in a supposed advanced nation, with ppl not able to keep themselves in controlled environments during summer or winter. This is a social justice and moral issue and the rates need to go down and investment into this issue by govt and education and social support, instead of the foolishness we spend our taxes on. Thanks for listening.

Type of Inquiry: Case Comment
Comments: IURC Cause No. 46258 - This is completely unnecessary. AES should review their own operating budget and consider other ways to account for these increased operating costs. Perhaps, their CEO doesn't need to make $18+ million annually? Nearly half of the service area barely survive on $20,000 income annually. Why should the general public be forced to subsidize that CEO's astronomical salary? If AES cannot make their business work without increasing costs to customers by 20% (the currently proposed 13.5% increase plus the already approved 6% increase) then their business model isn't viable. Accessing basic human needs should not be a means of extracting wealth to enrich a few elites. This plan is inequitable. I will not support any further rate increases for utilities and I request that the OUCC do the same.

Comments: To whom it may concern:

As a customer of AES, the proposal to increase rates by a double digit percentage is unnecessary and deplorable. Customers should not be responsible for subsidizing AES' infrastructures. Furthermore, offering payment plans for customers to pay for said upgrades is unethical. Consumers should not require a payment plan in order afford a basic need, such as a utilities.

It is in the best interest of the customer and the Commission to reject yet another AES' rate increase proposal.

Many thanks.

Comments: AES 2025 Rate Case
IURC Cause No. 46258

Dear Sirs,

I'm not sure how AES can justify an up to 21% rate increase after previous rate hikes. That is at least 6 times the rate of inflation as reported by the government.

Now, in addition to having to figure out if I am going to be able to afford my home in retirement because of rising taxes, I can also try to figure out if I will be able to afford electricity.

This rate increase is not justified. AES executives don't need to make multi-million dollar salaries. And, because they do, they don't care about how rate hikes affect their customers that have no alternative provider. How will executive compensation increase as a result of these rate hikes?

Follow the money. This rate hike is probably more about greed than need.

Respectfully,

Brent Spencer

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I first want to thank you for reading our comments and taking them into consideration. The rate hike needs to be targeted toward companies that are drawing additional power for their data collection. Especially the ones that aren't off setting their excessive needs with some type of renewable energy. These hikes if put into effect will start pushing residential bills into disconnect status if not into collections. If that's the case then the power company will be worst off losing revenue from costumers that can't return from defaulting. Thank you greatly for your time and consideration.

Thanks Again,
Bent Taylor

Please do not allow this increase. Utility companies have control of the city. I am a customer with AES. It is an unreliable company who has awful customer service. They do not need or deserve any extra money. Please vote no. AES can't get any worse than it already is. If they don't want to provide service for a reasonable price we should bring in another utility provider for competition.

VOTE NO

Subject: Bryce Langebartels - AES rate increases ref cause no. 46258
Date: Tuesday, June 24, 2025 10:05:55 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To Whom It May Concern,

I'm writing to express my frustration with AES and their desire to once again raise our electric rates. Referring to cause no. 46258 They already increased our rates significantly a year or two ago…my rates went up nearly 50% without warning. I have not used more power than any year before, so it made no sense. It feels like they're just being greedy. We pay our bill on time every month…it's on autopay, we try to be very conservative with our electricity even keeping our a/c at 76 in the summer and furnace at 66 in the winter, yet somehow our rates keep rising. Please help and keep them from raising our rates once again!

Thank you,

Bryce Langebartels

Utilities: AES - Cause 46258
Type of Inquiry: Case Comment
Comments: OUCC,

I urge you to push back against AES' rate increase for Cause 46258. They asked for and received a rate increase last year (2024). Now they are asking for another that will raise it again about the same amount. These price increases will make it very difficult for seniors and lower-income people to be able to continue to pay their bill. I do not see this improving the service I receive.

Besides, their billing system upgrade was a disaster. I am surprised management was not replaced due to the problems it created and bad publicity it received.

Regards,
Byron Jones

Subject: Cameron - Oppose AES Indiana's Rate Hike
Date: Sunday, August 3, 2025 5:01:36 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor,

I am an Indianapolis resident and AES Indiana customer, and I strongly oppose the proposed $192.9 million rate increase.

Since AES acquired IPL, we've faced rate hike after rate hike, yet reliability hasn't improved. AES is projecting a 60% profit increase by 2026, while asking residents to pay up to $30 more per month and raising fixed charges to one of the highest in Indiana.

Residential customers should not be forced to subsidize shareholder dividends and commercial expansion, especially massive data centers, while families struggle with rising costs.

I urge the OUCC to reject this excessive, regressive increase and demand AES show real service improvements before any new rate hikes are approved.

Thank you for standing up for Indiana consumers.

Sincerely,
Cameron Stemshorn
Indianapolis Resident

Comments: I am incredibly concerned about the case being brought forth by AES to increase Indiana power bills. It should not be a luxury for Hoosier families to afford to keep the lights on. With a 6% increase already approved for 2026 I request that AES' request to raise it further by 13.5% be denied. As a single person household, I pay around $100 in electricity during the summer. With a nearly 20% increase in 2026 this would rise to $120. I know that the effects to the raised prices would be even more devastating to homeowners and Indiana families.

Type of Inquiry: Case Comment
Comments: Please deny the rate increase on case #46258. AES has not shown any evidence they are reliable. Their horrible system conversion where they couldn't bill their customers correctly and it took well over a year for them to research, find the issues, and correct them. I do not trust that they have any real understanding of their future needs of the people they are responsible for serving. They need to audit their current systems and find efficiencies and waste before they come with their hand out.

Comments: I am writing to oppose the rate hikes AES has requested. My electric bill has more than doubled in the past couple years. I am retired and on fixed income with a home. My retirement which is much less than my social security has no cost of living. Social Security's cost of living increase is usually almost absorbed in the Part B Medicare increase. Having lived here since 1965 very limited power outages and they were short with IPL. Since AES we may go days without power! Look at the salary of the CEO. We have no other choice than AES and appreciate the electricity provided; however, we feel the company does not have the best interests of its individual consumers. It was a mistake to sell out to a global company!

I don’t know how you think people are supposed to make it when you are constantly approving increases for AES. My bill doubled last month which is ridiculous. I have never paid 450.00 for a house less than 900 sq ft. They are ripping people off with this service. They know we have no other utility company to switch to so why not screw the consumer. If this is approved I hope y’all can sleep at night.

Comments: AES is asking for an exhorbitant rate increase on its captive “customers” who have no other option for electric service. This is to be ON TOP of an increase they already got approved, which hasn’t even kicked in yet, per their own communication! And they also charge a big monthly fee just to be their customer. Expecting consumers to cover not only the needs, but also the wants, of every entity via rates, fees, taxes, etc, without consideration of the fact that NO ONE is providing US with increased income to cover OUR increased expenses on every front, is ludicrous and has to stop. Many, many people, including us seniors but not limited to us, are in danger of being priced right out of our homes by rates, fees, and taxes, on top of all the other increased costs of everyday life, such as food and gasoline. We cannot absorb continual rate hikes. AES’s communication RE this request sited projects I’ve never heard of hundreds of miles from here, and the cost of trimming trees away from power lines, a task they haven’t performed in my neighborhood in years and years. I am wildly unimpressed. Please deny their request.

There have been very poor decisions made by management as evidenced by the fiasco when they changed billing software.
The expenses caused by that long term situation should be discounted when considering the need for a rate increase.
Management salaries and profit should bear the brunt of those mistakes not the rate payers
I receive service in the 46224 zip code Speedway IN
I would also comment on a general degradation of service since the purchase of IPL by AES
sincerely
Dan Wellman

Comments: I am very concerned about the rate increase being requested by AES. In the current economic state we are in, with higher gas prices, increased grocery costs, increased daily living costs, but stagnant income levels (due to the economic state), it is unreasonable to request an increase of this magnitude. As a fully employed person, I received only a 2% pay increase last year. How can I afford up to a 21% increase in rates? The "math isn't mathing" as they say.

I am sure that the management and even general employees of AES received more than a 2% pay increase last year, so perhaps for now, they can shift their funding allocation to provide relief for consumers during this time, instead of taking their bonuses and pay increases from the consumers' pockets. Especially consumers who are retired, on social security, or have medical expenses that are not changing to match this increase in daily living expenses.

Comments: AES just raised rates last year, and people cannot afford higher bills. Indiana utilities are regulated monopolies that provide no alternatives if someone is unsatisfied with the price or service. There should be more incentives for solar and wind alternatives.

Residential rate payers should not be penalized for the building and operation of energy intensive data farms. These AI absurdities serve no purpose for the average person, are a great drain on energy grids and the environment impact required to keep them operational.

The entire cryptocurrency empire produces nothing of value, rather it is a vast ponzi scheme, once again draining energy and the environment while producing no useful products.

Thank you for considering my comments

As a senior citizen I oppose the rate increase being on retirement income. We just received relatively good new (ie for seniors) that we'll get a property tax credit in 2026. Now here we're presented with a proposed utility rate increase to potentially nullify the tax break. I oppose the rate increase and recommend other measures (eg smart grid technologies?)

Comments: Re: IURC Cause No. 46258, AES rate increase. The proposed rate increase is far too extreme for average consumers, particularly for those of us who are retired and living on fixed or marginally increasing incomes. Social Security increases, when they occur, are made in the low single digits to reflect consumer indices. A rate increase as large as the one proposed by AES forces us to take the remaining from the part of the increase from funds we need to that pay for food, clothing, shelter, and medical expenses. Please at least make any increase lower for senior citizens. Thank you for considering this request.

Please do not raise the rates again!!

It is difficult for some families to keep up in the summer and winter as it is now. Raising the rates -again - will make it even more difficult.

We are on "the budget program" so that helps.

Donald & Anne Bailey.

Comments: I think it's ridiculous . Some of us are disabled. And most in this state barely can afford rent , food or medical. The federal government has already slashed programs to help us pay for utilities. We shouldn't be responsible for the upgrades of you rich organization businesses. Every CEO. Of these companies should pay for their own building upgrades. Not the consumers. As we don't get government tax breaks. They do. So I say no to the utilities up charge for customers. Aes indiana just had several up charges within the last two years or so. And we as customers has already been paying for it. Perhaps indiana should do a disconnect, and or behind In payment audit on these utilities companies. Before they keep allowing them to go up in charges. I'm quite sure the politicians will see the math ain't matching.

I am opposed to the proposed rate increase! I do not know of anyone who get a paycheck increase of 13.5 percent!
The proposed increase, even over two years is too extreme!
If this company cannot manage then our area needs to find a new service provider.
Please consider that this will cause people to leave this area
Thank you pass this along to all involved in this decision.

Comments: I am reaching out to issue a dissenting comment to AES Indiana's proposed rate increase for Hoosier households. They are not acting within the best interests of their customers nor are they exercising financial acuity as a business considering they have already had a 12% increase in the last year. They need to operate within the current means of their given budget and not raise rates as a way to maintain profit margin ratios. This will hurt Hoosier families financially, impacting the larger economic activity and vitality of the region.

Hello all at the IURC

If you are having trouble paying for tree clearing without raising rates, please make tree clearing and keeping lines clear the home owners/ business owners responsibility.

I'm not sure if you are aware but most companies don't provide more than a 5% pay increase every year and your 13.5% rate increase is well above this. I, and most people don't care about solar, wind and batteries. I just want cheep energy. Build a new coal plant and put it in my back yard for all I care. Everyone knows that solar is a scam along with wind energy and the batteries that you plan on installing will be obsolete well before the initial investment is paid of. If you go through with this you will be making life more expensive for everyone and worsening the problem of why everything is so expensive already. Furthermore you will be helping China. We need cheap energy to be competitive in the global market. We need cheep energy to make everything cheaper and drive down prices.

Thank you
Eric L.

Dear Counselor Bill Fine,

Dear Mr. Fine and the Office of the Utility Consumer Counselor,

I am writing to urge you in the strongest possible terms to oppose AES Indiana's latest proposed rate hike under Cause No. 46258.

This request is outrageous. If approved, AES bills will rise by another $30 per month by 2027—on top of the $9+ increase approved just last year. This comes after years of poor performance, including long outages during storms, a chaotic and costly billing system failure, and little to no accountability to customers.

Now, AES is asking for an even higher profit margin—despite already having the highest return on equity among Indiana utilities. They want to raise the fixed customer charge (regardless of usage) and shift more of the financial burden onto regular people while corporations get a break. That's backwards, unfair, and frankly, offensive.

And let's be honest—this system is broken. I never got to choose AES. I was forced into using them because Indiana lets utility monopolies lock in entire regions. That is not a free market. It's un-American. Who benefits from that kind of setup? Certainly not the ratepayers. And while vulnerable households struggle to keep the lights on, AES shareholders are asking for even more.

The people of Indiana deserve reliable, affordable electricity—and they deserve a voice. This isn't just about rejecting this rate hike. It's about standing up for basic fairness in a system that feels rigged.

Please tell the IURC to reject this proposal. Enough is enough.

Regards,
Erin Bossen

My name is Stephanie Evans and I am currently a AES customer and my zip code is 46235 and my email is myangel.evans34@gmail.com

No I do not want a 13.4 price increase on my monthly power bill or any other price increase. We are already paying high AES bills and when winter hits my bill is easily over 400$ almost 500$. Citizens are already struggling with the current AES rates and a rate increase will only make matters worse for people. Our rates were already increased in April of 2024. They need to figure out another way to make their "improvements" or decrease the salary of the CEO if they cant seem to figure it out any other way. But increasing bills for citizens is not the answer.

Type of Inquiry: Case Comment
Comments: Aes wanting a rate increase IURC Cause No. 46258. I feel this is going to hurt a lot of people like low income Indiana has no assistance for aes until October (thought the water months only) I for me I cant even afford what I pay now and was told by aes there no assistance in Indiana or though them to help the only thing aes has through them is if you already been approved for the Indiana assistance which don't open until October. My electric bill this month was 179.53 for low income families this is heard for them. So the rate increase should not be aloud unless they is some kind of assistance that can be done though the summer months to.

Comments: Re: Cause No. 46258
Please do not allow AES to increase rates, again. There was already a $9 monthly increase approved last year. Another $21 per month phased in through 2027 would be devastating. That on top of the increased property taxes and proposed Medicare and Medicaid changes will be devastating to our limited budget.

Public comment is a vote no on the increase. Wages in Indiana are not enough to cover basic living expenses let alone higher and higher utility rates. Property taxes have been increased and people are being forced to live beyond their means or become homeless. We should not have to choose between paying utilities or buying food. The rate increases do not help the people for many years regardless of how a business can make it look on paper. The rate hikes are not justifiable.

Comments: In 2015 when it was still IPL my average cost per kW was $0.09. Now it is over $0.16 and AES wants more! This is outrageous! Any rate increase approved needs to include time based rates that allow home owners and EV owners to charge overnight when utilty demand is lower at an effective rate that is lower than what they are charging now. In 2024 AES Indiana showed a profit of $174 million off of a customer base of 532,00. That works out to $327 per customer! That isn't enough!! They want a rate increase on top of that!! No!

Comments: A 13% rate increase is a huge burden for fixed income people like me (Social Security) given the inflation that has already made most everything - especially food - so very expensive. And even if inflation is slowing, prices are NOT dropping with the exception of gasoline and that doesn't help the poor and elderly much. If the real reason behind this exorbitant increase is support for energy intensive Data Centers, I say bill them at a higher rate! If not, make the increase 2% - like my expected Soc Sec increase. Thank you.

Comments: Case 46258 AES Proppose Rate Increase

AES just had a rate increase last year and and the preposed one are greater then inflation.
I am on a fixed income and this rate increase along with car and home owners insurance, Medicare all going up at rate higher than inflation is making money tight.

I understand a new data center is comoing online and this should be a chance at making a substatual profit with their large enegry useage.

Also the data center should pay for thr infrasucture cost. I grew up on a dairy farm and we had to pay total cost of running a 3 phase line to thre farm. This was in the 60s and it was REMC.

What is good for small business should be the same for large business and newq comanies should be required to be able to supply 50% with rewnewable energy.

I am agaimst yhr rate increase since they just had one last year.

They at least should be held to the rate of inflation or spread accross the the company including Ohio instead of Indiana.

Jim Rinehart

Type of Inquiry: General Inquiry
Comments: I don’t agree with an additional rate increase in this economy. Wages are not keeping up with the cost of inflation in Indiana. None of tge legislation in Indiana provides any relief for the working class. AES needs to explore FREE SOLAR ENERGY! We are already facing a rate increase of 6% and cannot afford another 13% rate hike on top of that. AES needs to look at reducing its operating costs and the salaries of executives. This is an attack on the working class because power is a necessity!

Comments: Rates are already at an all time high - there is no need for an additional increase as families are already experiencing disconnection due to affordability issues. It appears the potential rate increase has little to do with operations and more to do with a company trying to make a large profit.

The CEO of AES made $13,355,284 in total compensation in 2024. Andres Gluski and other ridiculously paid executives should have their pay packages reduced before charging us more.

Please vote NO on the AES proposed rate hike.
Educate them by suggesting investments in solar and wind technologies to offset increased fossil fuel costs. Help the environment and be good stewards of the money received from customers already.

This is ridiculous. A 13% rate hike?

Move Indiana companies and the State forward. Stop the historical practice of raising rates to increase executives pay and the profit margins for utilities.
Your vote of NO can do this!

If AES leadership cannot find innovative solutions to reduce customers costs then replace them with people who can.

Will you take a stand for us?

Comments: In regards to cause #46258, please do not approve this requested rate increase. AES can’t even run their own billing system correctly, and that tells me they are not competent in handling the money they are getting from their current rates. There is absolutely no reason why their CEO should be making over $10 million in compensation if they can’t function under their current rates. We pay too much as it is, and there are far too many residents who can’t even afford the current rates. They should be forced to do what they and the government tell we the people to do - live within their means. Please do not approve a rate increase.

To whom it concerns:

Please vote no to yet another rate increase from AES. I’m am a retired registered nurse and on a fixed income. I will find it difficult to make ends meet if there is another increase.

Vote “no” for those of us without extra income to cover what looks to be a significant increase in the cost of our utilities.

Thank you,
Jan Reynolds

Aes indiana rate increase iurc cause no. 46258 .I'm a current customer. Jason Huey hartford city in 47348

I dont see how it's okay for aes to ask for a 13.5 % increase . They make plenty of money as is now , there has to be limits or just makes it easy like now for utilities to just come and requests increases . Aes rates have went up . I'm disabled and have went all summer long with my house being hot inside averaging 90 degrees and I havnt one time turned on my central air because of the electric bill as is .my bill is just as much as it was in 2024 when I ran central air all the time vs 2025 with no central air ..how do they expect disabled / low income family's to beable to afford it ? Really bad that a disabled family can't even run central air as is and has to suffer in a hot hot house day in and out . Think alot of these ceo's need to have to live off of ss/ ssi income and see how they like trying to scrape pennies up to get by and also having to do without , then maybe the world would start changing for the good . And how about all of the money that putting the smart meters in that was supposed to be saved by em from em not having to drive around everywhere all the time everywhere reading metters and such ? Yeah see there done back asking for money ..its time to take a stand and say enough is enough , time to make a diffrence for indiana aep gets plenty of revenue from the citizens everybody struggles bad enough now with everything else on the rise ..if it don't stop we're gonna be in a recession

Comments: Writing in regards to the proposed AES rate increase. Having lived in multiple cities and states across the US, our power infrastructure in Indianapolis is terrible and our rates are already high. We lose multiple times a year, every season of the year. If this rate increase is going to be approved then there needs to be an outlines plan of how the money will be spent to improve our electricity infrastructure within the city. We should not have to be without power and pay higher rates

I am a customer of AES Indiana, in IURC Cause No. 46258
These comments are on my behalf.
Do not support the continual rate increases of AES Indiana on the residents being served. AES has continually increased rates and at some point it must stop. This hot summer compounded by AES rate increases has led to high electrical bills. Even as I work to conserve energy, my bills go up. Electrical power is necessary for life in modern America and it must be kept affordable for all citizens.

Hello,

I have read of the recent request by AES to raise the electrical rates. Considering that AES records are often incorrect and their failure to trim trees around power lines shows a lack of proper management of the company. Giving them the rate hike will only encourage them to continue with poor service, lack of maintenance and failing to keep the power grid intact. I strongly oppose any increase in service until they can improve the service.

John Kelley

I am an AES customer and I live at 327 N Arsenal Ave, 46201 in Indianapolis.

I would consider my family to be a middle class household but we have already noticed a significantly increased burden of rising energy costs over the last few years. I understand the need to modernize our energy grid, but passing these costs on to households wholesale will place a needless burden on Hoosier families, especially during a time when rapid inflation is already hurting our ability to make ends meet. I am also concerned about the possibility of future data center development and the increased strain they will place on our infrastructure. If their increased energy needs are driving the need for power grid upgrades and thus rate increases, Hoosier families should not be stuck footing the bill. AES and corporations that are high energy users should be paying their fair share so that citizens do not face financial hardship paying for energy grid upgrades that do not primarily benefit them.

Re: Cause #46258

I am vehemently opposed to the proposed AES rate hikes. The community already took a major hit with the rate increase in 2024! AES keeps begging consumers to pay for maintenance and upgrades to their systems, but those rate increases are really just lining pockets. The widespread outages from wind storms last week are easy evidence that funds are not being allocated appropriately.

Tell AES to cut C-suite pay if they need more money for infrastructure! This community is already paying too much for lousy service!

Sincerely,
Kate Flohr

I am a Senior Hoosier on AES and living on a fixed income. I cannot afford another increase in my AES bill. If this increase is approved, there will be many who will have to choose between buying needed medications and eating (which has increased for me by at least 20% in the last six months). Maybe food hasn't increased as much for the rich who are buying beef and crab, but buying ground beef is a luxury for many of us.

It is really aggravating when I see how AES pays their CEO millions + dividends to shareholders and then keep wanting to increase rates on customers.

My husband and I, Monte and Kathy Hale at 8306 Reef Court, Indianapolis 46236, are against any rate hikes. Like almost all businesses and different levels of government, this is the time to do more with less. It's now time for AES to do the same.

I'd also like to know what the plan is to prevent any collateral damage to residential customers for any public utility providing services to the proposed and existing AI centers.

The Indianapolis Star's article in Sunday's edition was very informative and warns about the negative consequences on the massive power usage by these facilities. In my eyes, the rich get richer (and stay warm or cool in their homes and businesses), while the "little" people get screwed.

Comments: This is about the AES rate increase. I am against AES raising rates for Indiana customers. Most residents can barely afford what we are paying now. AES is a for profit company and seems to be doing well currently so there is no need for a price increase. I disagree with having a for profit running the city's electricity. Consumers have absolutely no choice in who provides our electricity and because of that our electric (and gas and water) should be a co-op or even a non profit. We have a monopoly on our utilities and have no ability to vote with our dollars. I would hope the utility commission would take that into consideration and listen to the Indiana residents but I highly doubt that will happen.

To whomever this may concern,

I am writing on behalf of my family about the potential increases that AES wants to push through. I'd like to start by saying I'm not a very "political" person. I'm more of an "average joe." My husband and I go to work everyday to pay our bills, put food on the table, and to be honest with you that's about all we can do these days. We don't take vacations, we don't shop unless it's an absolute necessity, we don't eat out often, there's very limited "extracurriculars" that our family gets to experience. With the rising costs of everything, which I'm sure whoever is reading this email can relate in some way, it's tough. AES is continually hiking prices. It feels like we are absolutely drowning. In July I had a surgery and was supposed to be off of work for 2 weeks per doctors orders. I ended up having to go back to working 5 days after my surgery, not properly healed, to be hit with a $440 bill from AES. Mind you, we are on the "budget billing" that is supposed to help people. How? I'd love to know. I tried countless times extending the payment and asking for help with absolutely no help. I am pleading with you as a working class citizen to think very throughly on what you are doing to families. What you are taking away. Because not only is it becoming a financial burden, it's causing people to mentally be drained. It's absolutely taking away from our day to day lives.

Sincerely,

Kaitlund Ward

Comments: This rate increase is just too much for working famplease.Although I do believe they are in need of a right increase.I don't approve of the 13.5%. Not sure if this can be reach with a longer period of time...5years. Or just lowering the rate altogether.

I'm a senior citizen living on a fixed income and everything seems to be going up. I received a small increase on my social security check and my electric and gas bill went up to take that away. I'm afraid that if they get another increase I'm not going to be able to pay my utility bill. What do they expect us to do. My husband and I have worked for a living and now we are afraid because everything is going up but our income it seems. I'm asking that AES please reconsider raising their rates and to think of how it will affect seniors who are barely getting by in life.
Thank you

Consumer Service Staff,

I am writing concerning Cause 46258. My name is Lindsay A. Shaw Sr. My wife and I are both senior citizens relying on SS and a small pension for our income. AES is asking again for another huge increase. 13 % is a lot to all of those folks of SS. They say the average increase will be $21 but we have lived in our total electric home for almost 47 years. The budget amount has been as high as $370 a month already. We are not average users. Plus every business we go to bills will go up therefore everything we buy is going up too. Inflation is not even close to 13%. SS recipients don't get 13% raises. They give us a small percentage raise then take most of it back for Medicare! So we end up with almost nothing. I worked in factories as a supervisor and had a budget to go by and was always asked to cut back! AES needs to cut back!! Please take a close look and consider all the poor people and businesses that are forced to struggle to get by. Thank you for your support and consideration. Lindsay Shaw Sr

Comments: No to increase in AES rates please. It’s already hard enough trying to keep up with rent and bills in this economy. Many of us working class are already struggling trying to stay afloat to keep everything paid already. We have to pick and choose which bills get paid in full every month. With the cost of living a lot of us don’t even have money left over to buy enough food, household supplies and other necessities after paying rent and utilities.

Type of Inquiry: Case Comment
Comments: Please Do Not allow AES, monopolized energy company, to increase rates Yet Again for no other reason than that they can. They claim the increase is for projected future costs. That is not a good enough reason. Senior Citizens trying to make it on social security, low-income families trying to pay especially in this economy is not feasible right now. In 5 to 7 years, raise it a little but AES does NOT need to increase rates right now. Property taxes are up, water costs are up, insurance is up and citizens are trying to make it day to day. We will have to live in the woods with campfires if this keeps up. It is not right to raise rates when it is NOT needed. Please do not allow this. Thank you.

Type of Inquiry: Case Comment
Comments: AES isn't a public utility company, it's a major corporation. It's CEO's base salary is $13,355,284. with stocks of $9,368,565. in 2023. And the company wants another raise!! They don't care about their customers, only their stock holders.

Consumers don't have a choice of utility companies so they are a monopoly. When I called to question the customer charge on my bill I was told it was to pay for them to bill me!! When I am without service for several days I never receive a refund. Their service is terrible.

I am in my mid 80's and on a fixed income. In the 20 years I have been receiving Social Security I have received ONE raise. There were a couple that amounted to $1.00 for the year. As a home owner I have to pay for my repairs why do I also have to pay for AES's? They aren't even based in IN.

If anything AES should be given a reduction not an increase. As a Board say NO to a raise.

Comments: Cause Number 46258

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. It is deeply disturbing that AES continues to request rate increases while offering substandard service after storms, with "multi-day outage events" now becoming the norm for Hoosier households. All Hoosiers deserve uninterrupted access to essential services and reasonable restoration times (made possible only by hiring sufficient repair personnel and equipment fixes).

The last increase provided Hoosiers with little more than a new AES website with "improved" billing services, which, in reality, is more of a benefit to AES than its customers. Consumers want fewer interruptions in service and quicker restoration times. Why can that not happen? Can you assure us that this rate increase (unlike the previous increase) will be used to improve equipment, shore up lines, and hire workers so that we do not have to endure more of the "multi-day outage" events? It was certainly far better when AES was IPL!

Please deny this rate increase, which will raise monthly bills while providing little (or no) benefit to consumers.

Best Regards,

Melissa VanHouten

The rates for AES are getting out of control. They are now asking for an additional 12% hike on rates that are too high. Why are we being requested to pay more money on rates that are already above the norm? Please, deny the request from AES. I am a single parent income after losing my husband to cancer last year. I'm barely able to keep the payments up as it is, and this would just be a nail in the coffin. It's not just me though. There are millions of people out of work and even more on fixed incomes that isn't going up. These people are barely scraping by, and have to choose between meds and electricity as it is. AES doesn't need more of our money, please vote no!

I am writing in response to the AES utility increases. What is happening IS RIDICULOUS!!!!!! My bill this month 'catch up' with the new rate increases when I am on the budget plan is $735.01. This is outrageous and you people should be ashamed of what is going on. You're going to make so many Hoosiers struggle it's sickening what you're doing. The budget plan over the last couple of year's for us has increased from $157 to $268 per month, and this is with these yearly ridiculous charges that put us in a tough position. We have to pay. I hope you people at AES feel horrible about what you're doing. This is beyond pathetic. The service is garbage, and this should not be allowed. Just a bunch of politicians who don't know crap from shit.

Mike Nichipor

Case number 46258
My name: Mitchell Duncan
Am I a customer? yes
Locale: Indianapolis, IN 46202
Comments are on my behalf

Comments:
I object to the utility rate increases. People are struggling with inflation already. Our jobs aren't paying enough. Utilities should not be for-profit. These rate utility increases will further hurt our community. We won't be able to buy as much from local businesses, therefore hurting our local economy. I object to these rate utility increases AES wishes to do.

Best,
Mitch Duncan

Subject: Ms.Tai Johnson - Statement for AES Rate Increase Hearing
Date: Tuesday, August 12, 2025 12:02:29 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

My name is Talmeaka Johnson, and I am an AES customer. I cannot attend today's hearing, so these comments are being submitted on my behalf.

I live in a 911-square-foot apartment, and my monthly utility bills are already close to $400. That is an enormous cost for such a modest space, and I am not alone — many AES customers in our community are facing the same struggle.

With rent taking the majority of our income, and the cost of food, gas, and other necessities continuing to rise while wages stay the same, another rate increase would push many of us past the breaking point.

This isn't just about higher numbers on a bill — it's about the people who will have to choose between paying AES or buying groceries, between keeping the lights on or keeping a roof over their heads.

Now is not the time to raise rates. I urge AES and decision-makers to put people first and protect the households you serve.

Thank you.

Respectfully,
Talmeaka Johnson

Comments: I have heard that rates may be increased for electricity. Given the amount of work that has been needed because of storms I can understand why an increase may be needed. However, I think that when they come to trim trees for the utilities they are not cutting enough and then money is spent not only for trimming but for more cutting when the storms occur. Especially over streets there are branches that need to be cut back more than they are. If the annual trims were more aggressive maybe the lines wouldn’t come down and the brush be so severe that it takes more money to fix the problem.

Comments: I don't agree that AES's claims have much to do with us; I believe they are to do with the new data centers. These data centers are using so much power - these rich companies should off-set their power with sustainable sources THEMSELVES! They don't need incentives and 100% tax breaks. They don't need discounted rates for power when we're being asked to spend more. Indianapolis citizens should not have to SUBSIDIZE these companies!

Comments: AES requesting a 13.5% increase is a joke. They just got an increase last year. AES net 700,000 million last year. Someone needs to step up for the common person. Many live on fixed incomes and cannot afford constant increases. Please do right by customers and do not let this increase pass. I speak for many, not just myself. I do not know if they are involved in any of the proposed data centers, but more people are against them then for them. They use lots of electricity and I'm not interested in helping pay for that. Please do what is right, and a 13.5% increase is not right!!!!!!!

Dear Friends,

I strongly urge you to hold hearings so that the community can comment on AES' proposed rate increase.

We have one choice of utility provider. We can't opt out of rate increases. AES has a monopoly. Please listen to the affected community before you vote on this issue.

Sincerely,

Patricia Clark 46202

I am a full time resident and customer of AES. I strongly object to AES rate hike as it will hurt customers more than it will serve them. I currently experience electric outages weekly. I also live on a fixed income as do many. Ongoing rate increases of this size are harmful to citizens. Customers should be of the highest priority and I don't believe the purpose of this increase serves customers

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hi,

I am writing to urge you to OPPOSE another increase in energy costs for Hoosiers by AES. AES as a monopoly should not be allowed to continually increase costs to hoosiers to fund their new non renewable energy facilities to power AI data centers while increasing salaries and bonuses for upper management and failing to maintain their current infrastructure for regular households who have no other options than to use this single power company. My power personally takes 3 days to come back online after a storm causes a power outage and I'm already struggling with increasing costs due to the most recent cost increases and increased usage of a/c in the summer due to climate change.

The burden of energy costs should not fall on the most vulnerable hoosiers--it should fall on the greedy power companies and the data centers themselves. Please oppose another increase in household consumer costs for AES.

Thanks,
Reagan Wohlford

Comments: AES Proposed Rate Increase

Each time these rate hike requests are made, the justification has been a system or infrastructure improvement. However, even with the additional revenue, many pressing concerns about the services have gone unaddressed. After the increase in 2023 to “upgrade” systems, customers experienced issues such as charges on their account three times the normal size with no explanation, charges being withdrawn up to 10 times without immediate refund and completed payments being marked as missing. These problems continue and have never been fully addressed or corrected. It's honestly hard to keep track of how many times AES has raised their rates. Over the last decade, rates have increased by more than 34%. The pace at which prices are increasing is simply not sustainable.

I am writing to oppose the requested AES rate increase. As a customer, I feel AES rates are already burdensome and inflationary, especially for those of us who are retired. I also oppose the "customer charge" on each bill, which seems unnecessary. Last month's customer charge for me was $17.00, which is outrageous. Frankly, AES financials should be audited. Considering AES' most recent increases, I believe this rate increase request should be denied.

Sincerely,
Rhonda Bennett

As an aes customer for the past 8 years with zero alternatives I strongly oppose this increase. Last year our electric utility bill nearly doubled from 120 to 230 per month utilizing the budget plan. Considering an additional 130 is absurd given the size of our home being under 1600 square feet. That would put our total utility cost electric and water up to over 400 per month on top of every other cost of living increase.

Comments: RE: AES 2025 Rate Increase, IURC Case No. 46258

I believe ANY rate increase that is in any way shape or form due to increasing power needs by data centers should be 100% the responsibility of those data centers and should NOT be passed on to residential or other business consumers. Paying for 100% of the power generation needed for operation should just be part of the cost of doing business for those data centers. AES rates should NOT SUBSIDISE data center power generation costs in any way by raising rates on residential and other business customers.

Dear Counselor Bill Fine,

I am writing to express my strong opposition to AES Indiana's proposed rate increase, docketed as Cause No. 46258, which would raise customer bills significantly over the next two years.

AES Indiana's request would ultimately increase residential bills by about $30 per month (or over $360 annually) for the average customer using 1,000 kWh. Combined with projects already approved, this represents an aggregate annual increase of $468 million by January 2027. At a time when Marion County already has over one in three households near or below the poverty line, these increases are deeply unjust.

The structure of this rate hike, which includes raising the monthly fixed charge from $17 to $20 and retaining a regressive declining block rate system, disproportionately hurts low-income, fixed-income, and energy-conscious households. These consumers are least able to absorb higher costs and have little recourse in a regulated monopoly.

AES has cited rising operational costs and the need for infrastructure investments; but even prior to this request, system upgrades have led to severe billing issues, including multiple erroneous withdrawals and missing payments. Despite millions already spent, customers continue to face service disruptions and billing burdens.

Even while pushing for massive increases, AES hasn't offered meaningful relief or affordability programs for struggling households. This lack of support is unconscionable given current economic pressures like rising food, housing, and healthcare costs.

I urge you to protect affordability by:
• Holding AES to a lower rate increase or rejecting it altogether.
• Requiring AES to improve its billing system before approving further increases.
• Mandating robust affordability measures like expanded payment assistance, income-based rates, or moratoria on shutoffs.
• Ensuring public input from the field hearings schedule for the end of this month is prioritized.

Utilities should serve communities, not strain them. AES Indiana's proposed hike, if approved, would further erode affordability in Central Indiana, especially for our most vulnerable

neighbors. I respectfully urge the OUCC, IURC, and any intervening parties to prioritize fair rates and strong consumer protections.

Thank you for considering my input in this critical matter.

Regards,
Sarah Dale

Comments: I’m extremely disappointed with AES. As a customer, I’ve experienced unreliable service, lack of transparency, and poor communication when it comes to billing and service issues. Now they want to raise prices? Absolutely not. We’re already paying enough for basic service that doesn’t always meet the standard. Before increasing rates, how about improving infrastructure, customer support, and accountability? People shouldn’t be punished financially for a system that barely works for them. AES should be held accountable, not rewarded with higher profits.

My name is Shannon Smith, and I am reaching out in regard to AES wanting to increase the utilities. Every time we have inclement weather, I will lose electricity and when I lose electricity it is for multiple days. Just this past storm I lost power before it ever started to rain and was without power for nearly 24 hours. In the past 3 years I have lived at my current residence. I have lost power for multiple days at least 2 times per year. The service is horrible, and they are wanting to charge me more. I would be happy just to get what I pay for.
Thank You for listening
Shannon Smith

Comments: AES is an incredibly horrendous company. From the day we moved into our home, we have had issues with them. Our electric bills are outrageous, customer service is subpar, and the constant rate increases are making it so we physically cannot pay our bills. The idea of increasing rates again when providing horrible service, especially with the most recent outages due to the storm that came through. We spent 5 days without power in June of 2023. People are still without power right now during this heatwave, and they have the nerve to tell US to be prepared and have a backup plan.

Comments: Please deny the request from AES to raise consumer utility rates! I understand raising rates every so often, but this will be the second time in two years. Using consumer funds to support fossil fuel projects instead of renewable energy is a step backwards. And if AES wants to support these potential data centers, the data centers should pay for infrastructure projects instead of their residential consumers. Thank you for your time and considering this request.

To Whom It My Concern:

As an AES customer, I am writing to object to the proposed AES rate increase. I find the amount to be excessive given the current rate of inflation, the Trump energy agenda and rate of return AES is currently showing.

There is nice and necessary. This appears to not be necessary within the current state of economic affairs.

Count me as a no.

No taxation. Without representation! You have taxed us and taxed us and taxed us and are only just now doing something. But yet you want to tax us some more?? We need these services to survive but yet you want to continue to raise the taxes and add more when you can't even get the minimum wage increased federally ; the cost of living has skyrocketed, people can barely afford their homes let alone the utilities required in the homes. But yet, their children get taken and they get evicted because they just can't afford it even tho they work 3 jobs. No more taxing us! You tax us on the money we make the food we eat the air we breathe. Stop! No taxation without representation! You have no need for more.

I am writing to voice my opinion on AES requested rate increase for 2025. I do not feel that ANOTHER increase is warranted at this time.

Not long ago they requested an increase & it was approved.
AES has not been a reliable company so far since the merger with IPL a few yrs ago.

Reasons behind the request to deny

*The updated computer system is still having issues (although not to the extent it was ALL of last year), making it hard for customers to even know what a normal bill should be. When implementing a new computer system it's imperative you make sure that system works properly before rolling it out. I worked for a huge company in the past that rolled out a new system that took almost 2 yrs to roll out completely. If they would have taken the time to make sure every aspect of the system worked properly by rolling out small sections at a time & making sure it worked on a few accounts at a time. Very seamless transition & the best way to do it !!

*The electricity continues to go out a lot in the zip codes 46217, 46227 & 46237 area and it stays out for days. I understand some natural disasters happen that is beyond their control but it happens ALOT. Why??

*their phone system is horrible to deal with

Consumers cannot take on the burden they are asking for AGAIN when we are not getting anything in return. They are a million dollar company that appears greedy & just wanting more. Some consumers can't feed their families due to this inflation so at this time I am begging you to NOT go thru with this request!!

Comments: IURC Cause No. 46258.
As a rate-payer I want to express my disapproval of AES's recent rate hike request. They're barely able to service older neighborhoods with above-ground power lines. The additional revenue, I believe, is slated for research into unproven nuclear technologies. Basic research is fine, but those funds need to be allocated by deliberative legislating bodies to approved research institutions, not from customers expecting to receive a proven electricity service that AES has shown they are barely capable of delivering. Any revenue generated from rate increases need to go to delivering on-going operational power services, not speculative pet projects.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

Service in my neighborhood can only be termed spotty at best, with all the profit AES currently has. I keep a record of every time my house loses power, for either a brief few minutes or an extended period of time. Currently, I am averaging about two times per week. That is inexcusable. No more rate increases until service is regular and reliable.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Thomas Beeler

Comments: There do not need to raise there prices, since it took at least 5days to get everyone power back up. When it was IPL and we had the lizard from 1978+ we have had several high storms and everybody's power was back up at least in one day time. You would think AES would do a better job of it. Maybe they should be like the fire department and work so many days and have so many people off and have several shifts for emergencies that happens like this people had to go other places due to oxygen because they needed their oxygen people that put insulin in the fridge or other medicines lost it so I think AES might want to try to reimburse people for a lot of stuff. I was around for when we had the blizzard and everything else so yes, I know what I am talking about. AES is not a very good company.

Juan C Scott & Tosha M Scott
Indianapolis, Indiana 46226
Our AES bill has substantially increased and created a burden on our household that includes 3 disabled members. Last year at this time we were frustrated our electric bill was in the high $400 range. Last month our bill was $691. Thus is absolutely ridiculous and unreasonable. Cost of living is a hardship when SSA income cannot keep up with rising utility bills such as this.

Indianapolis, 46250

I'm an AES customer. These comments are my own. I want to share my opposition to AES' latest request to raise their rates by as much as $21 per month. While I understand they need money for service upgrades, they just recently raised their rates by nearly $17 monthly, according to news coverage.

Given that I have no other choice in an electricity provider, they need to find another way to maintain operations without drastically increasing their rates in such a short period of time.

Thank you for the opportunity to share my opinion.

-Wade

Dear Counselor Bill Fine,

I urge you to reject AES's new rate hike request. My family is already living paycheck-to-paycheck thanks to almost EVERYTHING increasing in price 200-300% or more in the last handful of years & cannot afford yet another utility bill increase. We are financially drowning as Indiana citizens. Our income has increased nowhere near this level in that same amount of time...Barely even a fraction.
There is absolutely no way that they should be granted yet another rate increase, especially after them JUST receiving one recently & them spending millions of $$ on their new billing software that resulted in a major billing fiasco that probably STILL hasn't totally been resolved! Our family was affected by this billing mess. We also cannot afford to foot the bill for new power-hungry data centers & experimental mini nuclear power stations(I'm not against the possibility of nuclear...I just shouldn't have to pay for their experiment).
Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258. If anything, AES customers should be entitled to a rate REDUCTION, if not COMPENSATION for what we have had to endure.

Regards,
William Mewes

Utilities: AES
Type of Inquiry: Case Comment
Comments: Case number 46258. Do not allow AES to increase rates by over 13%. This increase outpaces inflation by over double even if you are talking about 2 years, but it's really over the course of a year from increase to increase. Indiana used to have a lot of speak based on lower cost of living. If this keeps happening, what would be the appeal of wanting to move to indiana anymore? Or businesses to open?

Why AES raising energy prices once again. I thought Energy was supposed to be getting cheaper not more expensive once again. And why are we socializing the investment costs and privatizatizing the gains? AES brought online 2 power generation/storage facilities where is this power going?

Type of Inquiry: Case Comment
Comments: I strongly oppose AES Indiana’s proposed rate increase, which would raise residential bills by 13.5% by January 2027. Many households are already struggling with affordability, and this hike—on top of a previous increase in 2024—is unconscionable. Low-income families will be disproportionately affected, deepening financial hardship across our community. Rising operational costs should not be passed onto consumers without greater transparency and accountability. I urge the Commission to reject this proposal and prioritize the well-being of Indiana residents.

We oppose the request by AES Indiana's rate request pending in IURC Cause No. 46258.

Indianapolis utility customers currently pay monthly bills that are lower on average than the national average.

However, AES Indiana's proposed rate case will add about $21 per month to a residential customer's bill. That means one, possibly two, less meals at a restaurant for retirees such as ourselves.

We already cannot afford to attend ticketed sports events or pay for memberships to museums. We have grandchildren and must budget around attending their ticketed sporting activities.

The AES rate increase, which we oppose, will adversely affect a Hoosier's spending power. In turn, that hurts commercial businesses such as restaurants or retail stores.

The AES request should be rejected.

We urge the IURC and AES to build upon existing renewable energy initiatives including credits for residential installation of green power sources.

Unfortunately we need electricity, and we appreciate your work. We know because of climate change, we will have more severe weather which makes your job harder. We pray that you can find a way to keep your service effective without a rate increase. Our current administration is making life difficult for everyone except the very rich.

AES is the only energy company for residents in Indianapolis, it's literally the only one. For Hoosier residents like me that live in a residential apartment building, we do not qualify for solar energy programs. What are our options as consumers? It is not possible to live without a heating or cooling system when it gets to 100 to below 0 degrees in Indianapolis. This is an essential, human need by ALL HOOSIERS. I want to understand why AES thinks its "financial impact" should be the impact of the residents. I am currently on a payment plan with AES because I lost my job and wasn't able to make payments regularly like I had been since I was 22 years old. Now with a new job, I am working hard to make the monthly payment plan with AES. I'm not running a business from my home. I'm not wasteful with the energy consumed by my home, if anything I work hard to lower my usage to reduce my bill. I simply CANNOT afford an additional cent to any of my bills. With the way groceries and gas have been increasing, I really need my other bills to decrease because my wages are not increasing along with the inflation. This is a much bigger problem than AES; however, this is the cause at hand. I want to understand the thought process of how the public service AES and CEO Andres Gluski think it is ethically sound to increase the monthly rates to the residents of Indiana, knowing that this rate increase plan will hurt the residents of Indiana. I appreciate the opportunity to voice my comment via email. Thank you. - Indy Resident

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hi my name is Andrew Griffioen.
I live in Indianapolis Indiana zip code 46229
My phone number is 317-412-8386 email address is leonimas5@gmail.com
I am writing about AES and I am one of its customers, and im writing about case number 46258.

I have written before about how I think aes has been taking advantage of its customers by changing its riders and the way they bill each month is inconsistent and no more transparency has been added on their part in their bills about what riders they charge for, and if I ask I can never get a clear answer. Its ridiculous to me that a public company is making money off of our necessities as people living in the area.

Being that its a public company you can see that the CEO makes 13.36 million dollars a year and the board has 6 other members making over three million. They had a profit of over 400 million in quarter 2. Thats in three months they profited 400 million dollars off of our basic necessity. They have 576000 customers give or take in indiana and to ask for a 14% increase is a slap in the face to every one of us. They are asking for a 17 million dollar raise to their already ridiculous profit. There is no way for us average Americans to keep up with these corporations continuously taking. This rate case needs to be turned down and if they need more money for the budget they need to take it out if the CEO salary. I speak for myself as a oaying customer. This is ridiculous to even have to right this email, let alone to find all this information and know they still want more is pure corporate greed.

Type of Inquiry: Case Comment
Comments: Reviewing my AES bills over the past two years, the totals have increased considerably already. If the utility was adding to their renewables and efficient delivery to us, I would not be alarmed; but instead, I hear reports of delivering electricity to centers owned by independent investors putting massive drains on the system. Also I see that instead of fading out coal driven electricity, we are keeping that as well as adding gas fired generation, giving us more air pollution to breathe in our state. Nothing benefits the individual homeowners and yet we get to pay for it. This is not right and any fair-minded consumer should object.

Comments: AES Rate increases will be a much greater burden on individual ratepayers than businesses. I also resent having to literally subsidize corporate data centers with my money, which will employ very few Hoosiers and guzzle our clean drinking water. As a literal monopoly on a public need, AES needs prioritize the wellbeing of the citizens of Indianapolis over various corporations. Please consider raising business and corporate rates instead, as with the current proposed structure individual ratepayers pay a larger portion. Corporate ratepayers should also have to pay for their infrastructure, not individual citizens.

Hello,

Am expressing deep concern that AES (among other electric companies) are raising rates & proposing yet more. What proof is offered re: build-out costs for existing data centers & future data centers ? The infrastructure that will be needed for data centers… will taxpayers bear that (sue to incentives offered to Google for example) ? Or will area residential customers share the cost for data center electrical infrastructure? Wish HOA's would let us put white shingles on in our community, to reduce solar heat gain. That'd be a great law for iurc & oucc to suggest to your peers/reps in the state Capitol.

I'm very concerned about affordability of living in my home. Pike township had a referendum that seriously affected my monthly mortgage payment. Groceries & hard goods cost more now. I'm a senior citizen that can't afford to retire.
Thank you,
Brad Fehr 6070 Morning Dove Dr. Indpls 46228

name: Brett Beavers
city: Indianapolis
zip code: 46201
IURC Cause No. 46258

To whom is concerned,

I am a single woman who works in public education. This July I went on a trip and turned my air down while I was gone for 2 weeks. When I got my AES bill it was $40 more than it was normally. I called AES to see what the reasoning and they did not have an answer for me. They said they could send someone out to check everything. When someone came by I was not notified and they said they could check it because of access. This may only be $40 to some people but it is a lot to others. This spike in pricing is only hurting the community and putting more money into already well financed companies. This monopoly should be illegal. Please consider the families and the communities that this will negatively be impacting.

Thank you,
Brett Beavers

Dear Counselor Bill Fine,

Please reconsider allowing AES to further raise rates. This company IS a monopoly and behaves as such. I have been on autopay for nearly 20yrs with them and they recently forgot to bill me for over a year. I suddenly receive a $5k bill with late fees and zero recourse other than to just pay the sum.

A company with competition wouldn't treat customers this way. They raise rates constantly and provide poor service, as they have no reason to improve or streamline their business.

Regards,
Brody Goodwine

Comments: I do not support a rate hike from AES. My monthly bill is already at least $100 higher per month this summer than last year due to the destroying of our environment, supported by the Indiana supermajority who believes coal is a clean energy source. As a publicly traded company, AES is exploiting Hoosiers for profit, and the fact that the legislature has allowed them to have a vice grip over our wallets for so long is frankly unconscionable. I live in an area where AES is my only provider, which doesn't even give me the option to shop around. Imagine living in such a wretched, wretched state controlled by greedy people who love to say government should be small while limiting the rights of their constituents, who promote competition and individualism, but then restrict our right to choose our provider. Any legislator who supports this rate hike should be ashamed of themselves.

I want to formally send a message to the Indiana Office of Utility Consumer Counselor to say that I'm strongly against the proposed rate hikes from AES. The rate that they want to increase is far too high. In a time of worsening economic uncertainty, families and local businesses are not going to be able to keep up. I believe a rate hike of this caliber will drive out businesses and families alike. I myself am considering leaving the city if not the state overall due to these kinds of hikes, and policy changes within the local government. Please consider families like mine when making your decision.

Type of Inquiry: Case Comment
Comments: I would like to comment that I don't believe we as customers of AES should be paying substantially more each month without cause or better service. $30 more a month is more than many people including my family can afford or have budgeted for. It could be the difference between a doctor's appointment or groceries or paying electricity which is a necessity we can't control.

Comments: EAS is seeking to raise the price of service by up to 21%. That is too much of an increase even if over several years. Prices for everything are increasing and wages are not keeping pace. Families cannot afford more increases in utility costs. Products should be staying the same or getting less expensive not increasing.

Comments: RE: AES Indiana Rates - Cause Number 46258
Please deny AES request to increase rates. I have no chance to ever retire. I will never be able to afford a house larger than a small garage. If you keep raising the cost of living, I will be forced to leave Indianapolis, and possible the state of Indiana. I was born in Indianapolis. I have lived in Indianapolis most of my adult life. Please don't force me to leave my home.

My wages are relatively stagnant. I earned less in 2024 than I did in 2023. I suspect I will earn less this year than I earned in 2024. I have not seen a promotion in over 5 years. I received 1 to 2% salary increase which is less than inflation and usually gets taken out of my bonus so I end up making less overall. Costs of living have been skyrocketing. Bills from Citizens Gas are up. Grocery costs are crazy. I rarely eat out anymore. I can't afford sit down restaurants. I stopped dating and most socializing to keep costs down. I got extremely lucky and bought a house smaller than your garage before the pandemic skyrocketed prices. Now I struggle to afford property taxes, and have no hope of ever upgrading or moving closer to family. I shop at Aldi. I have cancelled all my subscriptions. There is nothing left to cut out of my budget!

What this committee really needs to focus on is getting out power back from a company outside of our state. I don't mind a private company running a monopoly, but they need to be living in the same state so they can be held accountable. Lettting AES buy out IPL was a huge mistake that needs to be corrected.

Utilities: OUC Price Hikes
Type of Inquiry: Case Comment
Comments: Hello, I am a customer of the utility involved in the case. I understand a major rate hike of 21% or $30 is on the table. I imagine you are seeing your customers as wealthy Caucasians whose employment is seen as valuable, who will see such increases as negligible. I seek to represent those who cannot find such employment given a lack of a white collar skill set. What I am good at involves working with children and therefore I get paid a smaller wage. Our current financial climate does not look kindly on my skill set. I am a single parent of a child with disabilities. The grocery store takes a third of my paycheck. My bills take a third andexpenses for my son takes the other third. I live in what used to be my grandparents' house because that is what was affordable to me. I presume that those making this decision run in a much higher class. A class of people who easily go out to expensive restaurants with friends, enjoy entertainment and vacations. I imagine those persons behind the price hike don't keep a strict eye on the money coming in and going out. It is people like me who feel the deepest cut and buckle undrr the cost when a price hike like this comes around. People who are paid less have a small margin to take the beatings of such price increases. I appeal to you as someone with a smallpaymargin. Please don't do this. Please don't punish us for being poor. Please don't make it harder for those who barely live in this country. Please have mercy. Thank you.

I am writing to submit public commentary on the proposed rate-hikes for AES.

AES neither needs nor deserves to increase it's rates. Their rates are already high and they are profitable. They ignore local regulations and permit requirements, as they've done recently in areas like Whitestown. Rather than a rate increase, their rates should be decreased.

Sincerely,

Chris Edwards

The IURC can and should LOWER the amount of profit that AES is allowed to collect. If they lower the rate of profit to a still-healthy 5.1%, AES could do all of their proposed upgrades without raising anyone’s electric rate.

Type of Inquiry: Case Comment
Comments: IURC Cause No. 46258 - AES Rates
I am a customer of AES and am commenting on the proposed AES rate increases.
The rate increases proposed in IURC Cause No. 46258 are not justified and will cause undue hardship on the people who depend on these utilities. People are going without food to be able to pay for electricity to heat their homes in the winter or cool their homes in the summer during the high heat waves.

The IURC should hold AES accountable for the services they provide and the amount of profit that AES is allowed to collect. If the allowed profit is lowered to a rate of 5.1%, AES could still do all of the proposed upgrades WITHOUT raising anyone's electric rates. They should also stop subsidizing big businesses and make the big businesses pay their fair share of their utility usage.

Allowing a rate increase just so AES can reach even more high profits is unconscionable and the IURC should stop this rate increase and regulate AES amount of profit going forward.

Hello, I am writing this email in regards to the hike in rates for AES once again. As a single mother of three (11, 8,&3) in Marion county it is hard to manage all these bill increases and be able obtain a decent life. Most people are already living paycheck to paycheck and increasing our utility bill does nothing but benefit the bigger pockets. AES isn't even a US company anymore. I got my light bill down to 100$ and somehow it's 400$. That's a car payment. You guys and others are making people homeless with greed. STOP RAISING OUR RATES!

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Commissioners,

I am appalled that AES Indiana is once again petitioning for a rate increase — just one year after the last increase, with yet another scheduled for 2027. The economy is tough, and Indiana residents are already struggling to keep up with higher costs of living across the board. People have not even had a chance to adjust to the last hike before AES is asking for more.

This is unacceptable. Families and seniors on fixed incomes are being pushed to the brink. AES has not earned the right to demand more money from ratepayers while many of us are receiving unexplained bills, poor customer service, and no accountability. Before any increase is even considered, AES should be required to prove that its billing is accurate, its service is reliable, and its customers are treated fairly.

To keep granting them a rate increase whenever they ask would be unjust and damaging to hardworking Hoosiers. I urge the Commission to **deny AES's requested increase** and to stand with Indiana residents who are already doing everything they can to make ends meet.

Respectfully,
Crystal Buckley

TO: OUCC CONSUMER SERVICE
I am writing to express my concerns about this rate increase. We as elderly people don't work can't afford any rate increases on any bills at this time.
The price of food, gas, bills, rent, etc. is getting ridiculous We can barely live as it is. The AES bills are already out of control and getting unaffordable.
I feel like AES employee don't need any raises during this difficult time in the world today. Everyone is already facing more than enough challenges. This world needs to come together as a whole and support one another, because God is coming back to destroy this world. God never designed this world to become such a sinful nation. More and more people are living a homeless life than ever before and no one really care. This country is very sad. It's evil and corrupted, when are we going to wake up? AES need to cut the crap and set their budget to conversate the need of the job only and not give un-ridiculous raises/bonuses to the higher up staff or any other employee. All company have to cut cost on material, programs, projects, raises, etc. We already have to deal with the high cost of health insurance, food, RENT, utility companies, gas prices going up every week, cell phone companies are making a fortune off these dam cell phone, which most people need a phone for appointments, jobs, emergency, etc. My question to OUCC is why, why, why. Please don't pass this proposal it's not necessary right now. Nobody is handing anything out to elderly people for FREE. Some of us have worked all our life and then have to live on the edge everyday.
Thanks!

Subject: Dakota Hudelson-Zipper - LOWER AES rates--don"t raise them
Date: Wednesday, August 27, 2025 12:36:30 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Good afternoon,

As a citizen and resident of Indianapolis, I am writing to oppose AES's requested rate increase. AES is already taking in a large profit, and they should not be allowed to raise their rates. Instead, I ask the IURC to lower the amount of profit AES is allowed to collect to 5.1%. This would enable AES to collect a profit while also protecting residents from rate increases. I am not able to shop around for other providers of electricity, so I am forced to appeal to the IURC to stop this increase from occurring.

Thank you for considering my thoughts.

Sincerely,

Dakota Hudelson-Zipper

Daniel Picot
Indianapolis, IN. 46219
Bigdpicot@yahoo.com
AES Indiana customer
Case # 46258.
To the members of the indiana utility regulatory commission.
It greatly concerns me that AES Indiana would ask for another rate increase so close to the last increase.
I understand that there are data centers that are being built in and around the Indianapolis area, but that does not justify a rate increase on the residence of indianapolis and surrounding areas. When these large data centers are built, they are going to use a lot of electricity and I understand that,. AES should, And probably does have the means to pay for this infrastructure upgrade out of pocket.
That's all you have to tell AES Indiana. They
Cannot bill the local residents for future upgrades for large data centers.

As a senior , I and all my friends and family hope that you will see the financial burden you are putting on us.
Daniel Picot.

Hi OUCC,

My name is Megan Day, and I am a homeowner in Indianapolis. I am a masters student and a social worker whose job has been impacted by political changes. I am not in a position to pay more per month on electricity.

AES is a monopoly. 90% of its profits go to institutional investors instead of to the people. As a customer, I should have a say in how much I pay. I understand that tariffs are impacting costs for AES. I also understand that climate change is leading to increased severe storms. As a hardworking Hoosier, the responsibility to cover these costs should not fall to me as an individual knowing that wealthy shareholders will profit from this change in price.

Please represent the people instead of the pocketbooks. Please keep AES price increases down as much as possible. We, the hardworking people paying these bills, greatly appreciate it.

Sincerely,

Megan Day

Comments: This complaint is related to case 46258. I do not approve of the rate increase. The increased demand for electricity from businesses and corporations should not impact residential consumers. The cost for grid infrastructure expansion to meet the growing non-residential need is not the responsibility of AES residential consumers. Make the corporations pay increased rates and for the infrastructure expansion / upgrades. Beware of stranded assets -- make sure the corporations have full skin in the game and are fully paying for their electricity including infrastructure requirements. Protect residential consumers.

As Hoosiers are already struggling to put food on the table, I see no justification for rate increases other than pure greed. AES officials allege these increases are to aid infrastructure. However, many people lose power if someone farts in the wrong direction. How about, instead of hiking rates and putting Hoosiers at risk of default, you slash C-level salaries to help families who need it the most.

To whom it may concern,

We have lived in Drexel Gardens / Wayne Township since 2002. We are now in our retirement years and have been an AES customer (and IPL before that) the entire time we have lived here. We are writing this email to ask that the IOUCC reject the rate increase proposed by AES. Please note that we are writing this on our own behalf.

Over the years, we have seen our utility bills skyrocket to the point that they are now unmanageable. AES increased their rates not too long ago, and now they are again asking for another increase.

Unfortunately, as our income has decreased, our AES service has become a larger portion of our budget, and this new rate increase will be an even greater strain on our finances. In addition, we care for a 68-year-old disabled sister who lives on the near south side of Indianapolis. She is also an AES customer, and this rate increase would be an even greater hardship for her.

We do not see the necessity of this increase so soon after the previous rate increase. We fear the effect it will have not only on us, but on our family and friends who are already struggling to make ends meet. For these reasons and more, we respectfully ask that you deny the proposed AES rate increase.

Sincerely,

Mr. Roy Elsbury & Diane Elsbury

Utilities: AES Utility Rate Hike - Cause No. 46258
Type of Inquiry: Case Comment
Comments: Have two meters on my property. I am retired on a fixed income. This summer had my highest utility bill ever with all of the 90+ degree days. We just had a rate increase in 2023. The proposed 13.5 percent increase over years 2026 and 2027 will likely make my highest bill ever seem like a bargain when compared to future summer and wintertime bills.

Is it true the rate increas for AES is only for residential use? No corporate or business use? Now this is an even bigger nightmare.
I'm 74 years old, living on social security, disability, paying a mortgage, barely have any cable tv....can't afford it. Groceries? Cut way back. Trying to keep my little life in my little house...it gets harder and harder. Insurance rates go up dramatically, co pays, life should never be this hard for old folks. Give us a break. Explain why there is no rate hike for business, just us regular people trying to hard to just get through each month. Please stop them.

Indiana Office of Utility Consumer Counselor:

Please do not approved the AES rate increase on IURC Cause No. 46258.
I compared our increase in electric utilities to the compounded rate of inflation since 2015. They are on par. Any increase in AES's rates will far outpace inflation. We all need to manage our money including AES. Please do not approve the rate increase.

Thank you,

Dorothea Morton, a paying customer of AES

Inflation rate and low employment pay rates are not balancing out. Families struggling to purchase groceries and everyday necessities, while utility bills are rising. How are “We The People” able to thrive with more utility rate increases? It’s becoming very tired some and ridiculous. We shouldn’t be forced to keep paying more and more high utility rates .

Thank you

Comments: Regarding the AES petition for a 21% increase, we are retired, we receive no annual increase on our pension, and we will receive a 2.5% increase in our Social Security for 2026. It is simply not possible for us to absorb a 21% electricity increase into our monthly budget. Such an increase is preposterous, given that inflation in the US for 2025 is 2.7%. Your profit rate as a public utility is unjustifiable and so far over-reaching that those who dared to request such an outrageous amount should be summarily dismissed and replaced by people who have a conscience and a heart. If this letter is disgusting, it is FAR less so than the idea of a 21% rate hike.

Date: Friday, August 22, 2025 6:20:59 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I'm writing in regard to the potential AES rate increase. My name is Erin Heffern and I live in Indianapolis, IN. My zip code is 46201. I am a customer of AES.

I do not believe rate increases should unfairly fall on residential customers verses larger corporate and industrial consumers. The financial burden of the increases will severely impact fixed and low income households. These rate increases are proposed despite reports of the company reporting strong financial performance. There were rate increases in 2024 and service has not improved. I believe service has gotten worse with frequent outages and poor communication regarding the outages. Customer service is lacking as well. Lastly, consumers don't have an option to go elsewhere for electricity. Our only option in Indianapolis, at least in my zip code, is AES. This is a violation of antitrust laws.

Thank you for taking my concerns into account.

Sincerely,
Erin Heffern

Comments: AES rates are already too high for the service they provide. Every year we experience outages that have lasted for up to 96 hours. As a result we opted to purchase a whole house generator that cost $12k+. We wouldn't have had to make that costly expenditure had AES done it's job by updating their systems. Indiana has some of the highest utilities rates in the United states! Rate increases should be based on performance. AES has failed miserably!

A utility like AES which is a monopoly should have as low of a profit as possible. Lower the profit rate to 5% and put limits on compensation of those running the company. Electricity in Indianapolis is a necessity and a monopoly and should not be used to generate excessive profits; too many people are struggling with making ends meet and are not seeing their incomes rise anywhere close to the rate that electric rates are rising! Think of the average consumer here!!!!!

Comments: Case number 46258 regarding the proposed price hike by AES electric.
The price hike should not be allowed, given as the company already has one 2 years ago, and it did nothing to provide it's customer with more secure electricity. Their infrastructure is quite questionable given as our street has lost power for several hours in the middle of the day with no known outage or issue nearby. Half of the storms we get we lose power, and we have even been without power for 2 days, losing over $150 in food that was supposed to keep cold. We almost lost medicine as well that is to be kept cold, and I know we aren't the only ones. Unless it is going to be mandated that they upgrade their infrastructure to provide power more reliably they should not have a price increase. It is otherwise unwarranted.

To whom it may concern,

Hello, I hope this email finds you well. I am contacting you regarding the proposal to raise prices AGAIN. This seems to happen every 6 months. AES just continues to take from it's customers. How much more? When is enough, enough? What about families who simply can't afford to be stripped of more. There are single parents struggling, elderly and disabled folks on fixed income and more. Inflation is killing Americans and utility companies just keep taking. Utility companies have a monopoly on a particular area so that there's no competition. If there were competitive prices and consumers could price shop, there wouldn't be these greedy price hikes. My bill has jumped from 53$ a month to 121$ a month. I'm on the budget, have lived in the same apartment for 15 years almost, and it is a completely energy efficient apartment. My habits and family composition have not changed over ten of those years. I understand that companies need to adjust prices from time to time but this is ridiculous. Please say no to this price hike. Hoosiers need a break.

Thank you, be well
Jennifer R.

Type of Inquiry: Case Comment
Comments: Please DO NOT APPROVE AES' request for a rate increase, at least as filed. Their current profits (at 9.9%) are very healthy. Their service (relatively frequent power outages, terrible billing upgrade) is not ideal. But the worst is that their rate increase falls most heavily on residential customers (I am one), and even more heavily on lower and fixed-income customers. Big industries and especially big data centers, which will apparently use LOTS of energy, should not be getting a mere 2.5% increase while households pay a 13.45% increase. It's possibly a separate issue, but I am very worried about the big data centers coming that will require much more energy. They should be paying for that increase, not Hoosier citizens and households. Our costs have already gone up significantly over the last several years.

Date: Saturday, August 30, 2025 10:05:28 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,
I am sure it is too late or the people's voices won't matter much since companies take over and don't care about the people but rather the income they make. I, my family, and my neighbors are all against the new hike in rates AES is proposing. Not o my does hiking prices, again, hurt many who need the utility but it also hurts those who are already struggling. I am sure AES has their reasons for hiking the rates but those reasons should not outweigh the customers who need and depend on the utility as it is something we NEED.

Jessilyn S. Ott

Subject: Joey Myles - AES Indiana should put customers over profit
Date: Sunday, August 17, 2025 12:26:27 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Office of Utility Consumer Counselor,

As an AES Indiana customer with solar panels, I support all requests by AES Indiana to increase variable energy charges (rates per kWh). The higher the rate per kWh, the faster I will recoup my investment on solar panels.

A saying I go by in life is this: 10% is what happens to you and 90% is how you respond to it. Therefore, when AES Indiana wants to raise rates, every homeowner has a choice - 1. be a victim and complain this is unfair, or 2. take personal responsibility for your energy and install solar panels, or if you can't (due to affordability or you're a renter), then advocate with SUN and other groups for better state and federal solar policies such as community solar, net metering, etc.

Don't beg and plead to the utility to be merciful. Instead, hit them where it hurts and take control - turn the tables by going solar or joining the grassroots movement that will make it easier for you and others to go solar.

Sincerely,
Joey Myles

To whom it may concern,
I would like for the IURC and OUCC that I don't want anymore rate increases from AES indianapolis. It is hard for me to keep coming up with money just because they are for profit. They need to manage their money better.

My name is Jonathon Berry and I am an AES customer. The cause number is 46258.

Thanks
Jonathon Berry

Comments: AES Indiana Rate Case - Cause #46258 - I am writing to oppose the AES rate increase. AES implementing two separate rate hikes in 2026 along with another 6% increase in Jan 2027 while being the most profitable utility company is enraging. While I doubt service will truly improve, shareholders and the company will see an unnecessary increase in wealth as customers suffer financially. It will not be acceptable to lower the increase either as this still does neither me nor my neighbors any favors. We are on the budget bill plan with our new increased rate of $187/month starting in September. It's frustrating that we'll get slapped with another high bill come Aug 2026 because our budget billing isn't accounting for this increase. While my husband and I will likely be able to pay this increased bill due to rate increases in Aug 2026, I have several neighbors where a situation like this where it would be distressing as they're planning on one number only to be hit with a higher bill simply because of AES's greed. 21,000 households were disconnected this year, and 43,000 residential customers were reported to collection agencies due to delinquent utility bills. It's also concerning as weather continues to become more hotter and colder, bills will naturally rise to accommodate more energy needed to heat or cool homes. The average high temp for our August 2025 bill was 86 degrees while the average for our August 2024 bill was 83 degrees. Even if AES did improve service, my bills are rising regardless due to weather. Please oppose the AES rate increase.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,

My thoughts on the two-part AES proposed rate hike..…. It would appear that the powers that be at AES simply don't care about their customers. The majority of consumers' cost of living increases, whether from employment or alternate sources, have not kept up with the actual cost of living. There are no current conditions in favor of consumers. The cost of everything has increased…..groceries, fuel, property taxes, insurance, and of course utilities. The goal that should fall on the shoulders of governing/regulating agencies is to keep the actual costs of living instep with the government set cost of living (COLA) increases. It is imperative, especially for those on "fixed" incomes. Approving the current 2-step rate hike, resulting in an "average" combined increase of 13.5% does not accomplish this goal. It does the opposite. It keeps people in positions of having to make hard choices between food and medications or other necessities. I think when you consider that this is a profit driven enterprise with a CEO earning a total compensation package of over $13,000,000 per year (2023 reported figure), you can easily see the disparity between profit driven and customer driven decisions. Please keep consumers' livelihoods a top priority and DO NOT approve this rate hike.

Thank you,
Kari May

Utilities: AES
Type of Inquiry: General Inquiry
Comments: My understanding is that public comment is open until 9/2 RE a rate hike of 13% by AES to Indiana residents. My utility costs have increased so significantly in the past couple of years and it is unclear what continues to drive this. As budgets shrink for health care, and costs increase due to tariffs, and many are on fixed incomes, these costs are untenable. The options to support use of solar and reduce waste appear to be dismissed by the current administration, yet citizens are continually hit with rate hikes. Citizens need relief and wise governance. No to the rate hike.

Date: Saturday, August 30, 2025 9:39:10 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

IURC Cause Number: 46258

My name is Katherine Davis and I live in Indianapolis, IN 46201 (Center township).

I am a current customer of AES Indiana and I strongly oppose the proposed utility hike. If the business needs upgrades for technology and infrastructure, it's the responsibility of the business to invest back in their own company. At a time when we are all struggling to pay basic everyday bills, this is an embarrassment and an absurdity for AES to ask the rest of us to make up for their lack of planning with this price increase after they JUST increased our prices already. They have a responsibility to anticipate the needs of the community they service and ensure they plan for future problems, upgrades, man power, technology, etc. The community and the people who fund their company and pay them directly for their services should be their main priority - not what kind of profit the shareholders receive.

Thank you for your time.

Hi,

Please consider this my formal request to deny AES their rate increase. Times are getting tougher by the day and this is an awful time to increase a basic necessity in Indianapolis. Corporate welfare comes in all shapes and sizes and constantly increasing base rates is one. It's possible they like some other utilities give super low great discounts to businesses while individuals pay higher rates. Please stop this. Especially as the world goes darker. I saw my share of abnormal obsolescence and special tax abatements where no one checks the math as a state employee for years. I bet that is still happening.

Thanks in advance for your diligence in helping consumers in Indiana.

Respectfully,

Comments: Turn down AES proposed rate hike. With the cost of inflation and interest rates, Indianapolis residents are already stretched too thin. Energy prices from monopolies like AES have already outpaced cost of living and have dramatically risen in recent years. I wish it would go back to IPL as they were more reasonable. Energy should NOT be for-profit and I’m tired of increasing their stock with my income. Vote no on the proposed price hike.

To Whom It May Concern:

I have a lot of issues with ANOTHER rate increase. People I know are elderly, with the inside temperatures set to 80 degrees because they cannot afford the current rate increase. How are the disabled among us supposed to pay for these increases? A friend of mine has POTS related to having long COVID. High temperatures exacerbate her condition. What is she supposed to do?

Service is spotty and customer service is non-existent. The power regularly goes out when there is inclement weather, yet it is proposed that we pay more? Hoosiers need a break!

How about approving a rate DECREASE for once? I suppose that the AES top executives really deserve a $13 million income...!!

I vote NO. I hope my voice is heard.

Private business owners are smart enough to budget for growth, maintenance, and infrastructure. I'm certain you have the he ability to follow a budget process.

An increase of $30 per consumer household per month exceeds a 10% increase. It's completely ridiculous to have this kind of increase with the current economic and political environments in our country.

Disgusting.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear AES Indiana,

We are semi-retired senior citizens on a fixed income in Indianapolis. Our electric bill already **doubled this summer during** the excessive heat. There is no room in our budget for another increase.

We need a break, not an increase. Please withdraw or scale back the proposal—or at minimum delay it and add stronger protections for seniors and low-income households (bill credits, expanded assistance, and fairer rate structures). Reliability matters, but it isn't reliable if people can't afford to keep the lights on.

Please record this email as a formal objection to the proposed rate hike and confirm receipt. Keep us informed of any hearings or decisions.

Thank you,

Lee Ann Lamb

From: Lee, Whitney R
To: UCC Consumer Info
Subject: Lee, Whitney R - Complaint: Indiana utility price increase
Date: Thursday, August 14, 2025 4:35:06 PM
Importance: High

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Hello,

I am writing a formal complaint as a proud Hoosier, homeowner, and customer of AES. I want to convey my frustration and disapproval with AES's proposal to increase customer prices. With the cost of everything going up, a utility hike will make it even harder for Hoosiers to afford basic living expenses.

This practice of taking from customers, without tangible improved services, to pad the pockets of the few executives' pay cannot continue. I propose reducing the salaries of AES leadership by 17.5% to cover the cost, since they are the ones making these strategic investments.

If that sounds ludicrous, consider how it feels to hear that the electricity needed to run everything in your home is drastically increasing for someone collecting social security, a single mother working to provide, or someone working a *$7.25 per hour* minimum wage job. We must do better. Not only as Hoosiers, but as decent human beings.

Sincerely,

Whitney Lee

Please consider limits on rate increase requests by utilities. Basing increases on other costs of living in some way makes more sense than having to consider utility rate increases annually or even more often. Customers' incomes never increase at the rate requested by AES. I would not complain if my social security check increased at the same rate as utility rate increases occur.
Thank you for your consideration of all of the citizens' positions.

Comments: The increase request by AES will destroy the Senior Community in one huge swoop, with high property taxes, groceries petrol, medical, insurance costs, rent, and soaring inflation the average retired person will suffer huge harm. An increase of 5% would easily handle the costs incurred by AES!

My household is **not** in favor of the AES rate hike.

To support ANY increase, I need to understand EXACTLY how this will **directly benefit me and my neighborhood**. I do not want to pay more for other neighborhoods' infrastructure to be improved while our failing infrastructure remains untouched.

I'm writing as the pastor of a church that includes many low income members who already struggle to pay their utility bills. The proposed increase in AES rates will be debilitating for many of them. The burden of the increase also seems to be disproportionately placed on residential customers' shoulders even though the increased need is primarily for corporate purposes (many of which were resisted by residents to begin with). I strongly urge you to deny this rate increase and require AES to find better, more equitable solutions. Please be guided by morality, compassion, and justice. Thank you.

Comments: When I contacted AES about my August bill increase, they told me it was my 6 month review. Also that my budget billing was too low.
Well, I live alone, and for the previous 13 years I've basically paid the same budget amount.
When I spoke with customer service, they informed me that I've been paying the wrong amount for 13 years! Other than this summer, I've had credits on my account because I didn't have to use my A/C.
Also on that note of not paying too low, why didn't they let me know? Now they spring this on me!
I retired 2 years ago. I understand cost go up, but should only be for expenses for the service not for making all the officers richer!

Yahoo Mail: Search, Organize, Conquer

Dear Sir(s)

I am writing to speak against approval for a rate increase for AES. Firstly, a rate increase for them went into affect this year. Secondly AES had profits of $698 million last year. Thirdly, the CEO for AES had a total salary of $12.7 million in 2023. Perhaps he can take a pay cut. Many neighbors are saying their electric bill has doubled this year. This is unacceptable.

Since COVID nothing has gotten cheaper. Everything is more. Property taxes are up. Food prices are up. People on fixed incomes cannot absorb constant rate increases. It's a shame the power company is a monopoly beholding to its shareholders before it's customers. It's been years since a crew has performed vegetation control in my neighborhood. This results in power outages during heavy storm.

Again I urge you to vote no against yet another rate increase. I realize our voices matter little and that you will again rubber stamp and increase but wanted to make you aware that people are extremely unhappy with this.

Sincerely,

Matthew McGarry

Comments: AES has raised rates on our community multiple times making it difficult for its customers to pay their bill. The fact that anyone is paying over $300 a month for just electricity is outrageous. We understand inflation and prices to reflect the economy but that has gotten out of hand. Some people in single story ranches are paying over $500. We've been here for almost 10 years and our average bill was always around $90. The last 5 years it had doubled and now tripled.

Comments: I am contacting you regarding AES's case to raise rates. I am a customer of theirs, and I want to make it clear that I am completely against this rate increase. I find it entirely ridiculous that this is even being considered, because the reason they want to raise rates is solely to increase the profits for their investors. This company serves the public and is a monopoly, so we consumers have no choice but to use thier services. Raising rates to increase the profits of investors, including but not limited to Vanguard, Black Rock, and State Street is completely uncalled for and a blatant abuse against consumers who are unable to take their business elsewhere for this service. I urge you to not allow such abuses of the pupublic. Thamk you for your support in this matter.

I'm opposing the plan to increase the current AES rates. I shouldn't have to pay for a data center to come in the state. And then turn around and sell that energy back to the consumer. If they want to build a data center, they should be able to provide the funds to do so. These companies are huge. The consumers should not have to continue to pay over and over for the same companies to benefit. You should not even be using our agricultural land for anything other than agriculture.
Current rates are astronomically high! This year was the highest my bills have ever been. I struggled to make ends meet just to pay my bills. I don't feel like I could handle another rate increase! All for data centers that are for big companies that can afford to do that on their own. We should not have to pay for that. The Amazon Data center alone is supposed to use half the energy that the whole entire State currently uses! That should be on Amazon to cover the cost.

Thank you for your time.

Thank you,
Millie Parke

Utilities: AES Indiana Proposed Rate Hike - IURC Cause No. 46258
Type of Inquiry: Case Comment
Comments: I am an AES Indiana customer opposed to further rate hikes. The proposed rate increase comes after a recent rate hike, and it would place AES residential customers among the highest electric-rate payers in the state. Please consider the impact this rate hike will have on low- and middle-income families, seniors on fixed incomes, and small business owners. An essential utility service like electricity must remain affordable for all Hoosiers, whose financial decisions are already difficult due to the rising costs of necessities. An additional increase would further strain budgets. AES Indiana already has the highest profit margin among investor-owned utilities in the state. A further increase in profits at the expense of residents is unjust, especially when commercial and large industrial users are given smaller increases. I question whether AES Indiana has made every effort to control costs before requesting more money from customers. It feels as though the burden of rising costs is being passed directly to consumers rather than being absorbed by a company that is already very profitable. The AES rate hike proposal should be rejected. AES Indiana can find more responsible solutions for its operational costs and infrastructure investments than imposing a disproportionate burden on its residential customers.
Thank you for attention to this critical issue and for representing the interests of Indiana's utility consumers.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Nick Hess

As a retired, senior, home owner; I am "OPPOSED" to the current "AES Rate Hike."

Currently, nearly every aspect of our economy has/is experiencing debilitating rate increases for most all individuals. On nearly every front, almost daily, we receive yet another advice of an anticipated, rather approved rate hike. Which, of course, causes us to struggle to maintain workable monthly budgets.

Continued rate increases will undoubtedly result in an increase in "homelessness."

When is enough, enough? My vote is "NO" to any proposed AES Rate Hike.

I just saw my automatic payment to AES. It was $400.00! That is a huge increase. I hope we can work together to get these rates down to where they are affordable. There are many people who cannot pay this increase. What will happen to them? What happens when the data centers suck up the electricity in our areas? Are they going to pay for it and the water? From what I've read, the cost will be absorbed by the taxpayers. This is not acceptable. We were on our way to using clean energy, solar and wind. Now we are allowing coal to burn and continue to pollute our air. This is backwards. Who will stop this nonsense?

AES - yes I am a customer
46258

I do not agree with another rate hike for AES customers - considering there was a 7% increase in 2024 which provided a 9.9% profit margin.

Improvements are planned from profits and rate increases should not be considered the primary revenue.

Don’t be greedy, do what is right.

Don’t raise prices at the expense of the customers serviced.

Utilities: AES Rate Increase Review
Type of Inquiry: Case Comment
Comments: The rate increase is designed to provide infrastructure and services for data centers. The everage household and small businesses will incur additional expenses to support data centers. Data Centers will then receive discounted utility rates and absurd tax abatements all at the expense of the rest of the population. This is definition of Gov subsidies for corporate america and privatization of the wealth. The correct answer is NO. If Data Centers and the Utilities need to update their infrastructer or hardware, the expenses should not be passed to the avg hoosier. Enough with the Corproate Welfare. Reaganomics (Trickle Down) is a failed policy. Make the rich pay their own way.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

To Whom it May Concern:
I write today to express my opposition to AES Indiana Rate increase case – Cause #46258
I recently became eligible for my Social Security benefits and am still struggling to get through the process. My husband will be retiring next year. We are now effectively entering a period of limited income. My AES bill just went up $8 a month. Which may not seem like a lot but $96 a year is a lot on a limited income. Our house is getting older and this year we have incurred several expensive repairs and replacements, depleting our savings in a way we had not anticipated over such a short time. With the prices of everything rising significantly, an additional $20 per month for electricity as projected is concerning.
I am also very concerned about the drain on electricity (and water) the existing, in progress and proposed data centers will create. Reports make it clear these data centers are being offered significant tax incentives. No one can convince me that some of the costs associated with building and maintaining these data centers, e.g., substations, infrastructure, electricity, etc., will not be passed onto residential consumers.
"This year, Gov. Mike Braun signed House Enrolled Act 1007, which requires large load manufacturers to pay at least 80% of the costs for new energy infrastructure needed to power certain buildings, like data centers.
Residents would be stuck paying the rest, advocates say. But even those numbers aren't so straightforward."

Type of Inquiry: General Inquiry
Comments: Anoter rate increase byy AES indiana is both outlandish and rediculos at this time. Bothh seenoir citizens like ouurselves and thhe ggeneral residential popuulation cannot keep up with these rate increases so close to themseles especiallyy wen the rop poeple at aes indiana are makking huudreds of thousands of dollars eachh years and the even highher ups are making in the millions each year, this is absurd. AER indiana needs to stop with the rate increases so much when the general pblic at large is not getting even enough pag=y rases to cover the cost of inflation, let alone any offhher epenses.

Utilities: Aes electric
Type of Inquiry: Case Comment
Comments: Referring to case 46258, the requested increase for electric services, AES was just granted a increase and most customers haven't began to absorb it yet. I am retired and disabled. My wife and I live alone , and have done all we can afford to reduce our usage. I've increased my insulation, caulked windows, replaced door sweeps, and converted my entire house to led lighting. It helped, but then, you took it all and more. Now, your again asking for more, and at this point your taking food, clothing etc.. from us. You aren't the only ones that are doing this, it's everything and everyone. What was advertised as a 17% increase ended up being more like 35%. Some people we know have bills that doubled. Enough is enough.

AES rate increases have basically become like extortion. My bill this month is exactly double what it was for the same period in 2024 and that is unacceptable as well as ridiculous. If anything in my life had changed that MIGHT explain some of it but nothing was different! I feel they are trying to take advantage of the citizens and should NOT get a rate increase at the expense of tax paying people. We don't need to line the pockets of their executives! We just want to be able live without worrying about how to pay an electric service with exorbitant rates! Please do not approve another increase!!!

Another irate citizen!

Utilities: AES Rates
Type of Inquiry: General Inquiry
Comments: re: IURC Cause No. 46258 (AES Rates)

Please do not allow AES to raise rates. This is an extreme detriment to consumers.

Our state government won't let Indianapolis do what makes the most fiscal sense (taking over our own electric grid and running it as a municipal agency). Consumers aren't allowed to simply shop elsewhere for their electricity because in Indiana, private companies receive a monopoly on electricity generation and transmission.

Since local government can't act and consumers can't act, the utility regulators MUST. And they have the power to!

The IURC can and should LOWER the amount of profit that AES is allowed to collect. If they lower the rate of profit to a still-healthy 5.1%, AES could do all of their proposed upgrades without raising anyone's electric rates. If they refuse to do this, they should at LEAST stop making families subsidize big businesses, and stop making efficient customers subsidize inefficient ones.

Type of Inquiry: Case Comment
Comments: Price hikes for electricity are quite unnecessary and, frankly, predatory. Hoosiers in Marion County and surrounding areas do not have options for electricity. It is not a free market. AES's 2024 net income was $1.686 billion according to Yahoo Finance. If not greed, what is the driving force behind raising prices for something we cannot live without and have no other option for obtaining?

Type of Inquiry: Case Comment
Comments: I strongly oppose AES Indiana's proposed rate hike, which would raise residential electric bills by up to $30.32 per month by January 2027. This increase comes on the heels of previous hikes and places an unfair burden on everyday Hoosiers—especially working families, seniors, and those already struggling to afford basic necessities.

AES is requesting a 10.7% return on equity, the highest among Indiana's investor-owned utilities. This is not about maintaining service—it's about maximizing shareholder profits at the expense of customers. If AES simply reduced its profit margin to 5%, there would be no need for a rate increase at all2.

The proposed structure also disproportionately affects residential customers, who would see a 13.45% increase, while large industrial users would only face a 2.5% hike. This is a regressive and unjust approach that forces households to subsidize corporate energy use.

Electricity is not a luxury—it's a necessity. Many residents are already making heartbreaking choices between food, medicine, and utilities. Approving this rate increase would deepen existing hardships and widen the gap between corporate interests and community well-being.

I urge the Indiana Utility Regulatory Commission to reject this proposal and demand a more equitable, transparent, and responsible approach to utility pricing.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Mr Fine,
My name is Steve Pennal and I live in Indianapolis in the 46250 zip.I am a customer of AES. I am writing to ask you to stop the increases proposed by AES in the above named cause. My understanding is that as a public utility they already have a 10% profit and are seeking more. My concerns include the apparent request for an unequal increase that will burden homeowners more than businesses and that if passed as requested there will have been a 50% increase in our monthly bills from 2021 to 2027. Not only that but there are no provisions to help needy families in the proposals and with Federal help apparently dissolved by the present administration, local aid will be more important than ever.
Please decline their proposal.

Sincerely,
Steve Pennal

Comments: I have spent the last 17 years of my life living and working almost exclusively with low-income, working people here in Marion County. In the past five years we have seen the soaring cost of rent outpace the growth in wages. Families are being squeezed to the edge of homelessness despite often working multiple jobs. Regarding AES' request for a rate increase, I support the following: 1) Lowering AES' allotted rate of return on equity to 5.1%; 2) No increase on residential rates; 3) Set one base rate for all consumers, regardless of whether they are residential, commercial, or industrial. Why should I or anyone else pay a higher rate than the business down the street? Thank you for your time and attention.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Indianapolis residents are OPPOSED to any rate increase. This is not the time for a rate increase when residents are struggling to pay mortgages and grocery bills. This is unconscionable to ask for this rate increase at this time. I am an Indianapolis resident, AES customer, and believe now is not the time. AES needs to work within the budget they have and tighten the belt from within like we all have had to do in this economy.

If AES can afford to donate $375,000. To Marion University why can't they use that money toward management of their own business instead of raising customers rates?

Respectfully…. Terry Ridenour ,246 E. Harrison st., Mooresville,In. 46158.

My last bill received yesterday…$298.00. I'm a stage 4 cancer survivor and on Social Security….Please vote NO! Thanks for your help!

Sirs,

RE: Cause #46258

An AES customer for 23 years, I have seen multiple rate increases that over time have well exceeded general price inflation. It is time for OUCC to take a VERY hard look at this latest proposal. There are 2 major regulated expense categories: capital recovery and operating expenses. OUCC needs to insure that any proposed capital investment that adds to the recoverable asset base will be productive and benefit rate payers. Operating expenses should also be closely examined in a similar fashion.

At the end of the process OUCC needs to publish an understandable and transparent justification for the outcome of this proposal.

Dear Counselor Bill Fine,

The energy sector is a leading source of the runaway inflation that everyone is now experiencing. Increases in the cost of electricity will feed inflation by forcing industries and businesses to pay more to provide consumer products and services. This will be in addition to higher electrical rates for consumers. The whole process creates an inflationary spiral that eventually feeds back to electrical utilities who will then try to ask for more rate hikes, because of their costs of business. Stop this insanity of inflation at the source, which by and large is the energy sector. Thank you.

Respectfully,

Comments: Regarding case 46258
AES has already implemented multiple rate and increases over the past two years. The last increase was just a few months ago, if that long. My bill has gone up significantly compared to a couple years ago. Normal spring/fall bills were around $55-$60, now they are close to $80. This is during the time A/C and heat are used at a minimum. It's much worse in the winter, breaching $300 over this past January. I'm considered one of the most efficient users and these are my bills, it's too much for me. Any further rate increases will prevent me from either heating the house or going without food. AES should learn to budget, that's what all of the normal people need to do.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Office of Utility Consumer Counselor,

As an AES Indiana customer, I know that my neighbors are already struggling with rising electric bills. The last thing we need is yet another bill increase from our electric utility. Please hear me and all the other AES Indiana customers asking you to put our needs over more profits for AES. I urge you to reject this new rate hike.

AES Indiana's request to collect an additional $192.9 million every year is unconscionable, especially after having another rate increase approved just last year. Combined with other already approved rate hikes, the total increase to customers will be $468 million by January of 2027. Indianapolis families can't foot that bill. We shouldn't be paying for AES to increase their profit by 60%. We shouldn't be subsidizing large commercial and industrial customers who can afford to pay more for electricity. We shouldn't be penalized with higher rates for using less electricity.

Indiana's Five Pillars for energy policy, established by HEA 1007 from 2023, requires that Indiana electric ratemaking decisions must consider affordability. If approved, this rate hike would push the average monthly residential customers bill to nearly $180 per month by 2027. That's nearly $70 more per month than the average bill in 2020, and more than $30 more per month than today. That doesn't sound affordable—especially not when families are already making impossible choices about how to make ends meet. Electricity service is a basic need for living safely and securely. Families shouldn't have to choose between paying the electric bill and putting food on the table.

Instead of prioritizing their profits over their customers, AES should be working to meet our needs. That would mean empowering customers to control our bills and provide benefits to the local electric grid with energy efficiency, rooftop solar, or other distributed energy resources. It would mean helping customers at high risk of power outages benefit from resilient solar and storage systems that can also benefit the local grid. It would mean allowing for customers to save with community-owned community solar projects and allowing tenants in multifamily properties to benefit directly from on-site solar. And it would mean optimizing the local distribution grid to benefit from customer-sited energy resources—and fairly compensating customers for the value they add to the grid.

Please stand up for customers like me and reject the latest rate hike request from AES in Cause Number 46258.

Sincerely,
Alice Miley

Comments: RE: IURC Cause No. 46258, AES Rates

I urge you to reject AES's new request to collect another $192.9 million every year. It has only been a year since their last rate hike was approved. If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

Over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo4NTAwMWUxMGE2ZGE0OTY5OTUzZGQ5MDU0OWZlMTVkZTo3OmI3OTc6ZTZmY2M4MzVjNmZiN2VhNWMyYzdlOWU1MzM2N2UzZjhiOTI1ZDRlY2Y4NTA4Y2ZiYTY4YjMxN2Y1MjI1NWY0YjpwOlQ6Tg). How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits. The IURC can and should LOWER the amount of profit that AES is allowed to collect. If they lower the rate of profit to a still-healthy 5.1%, AES could do all of their proposed upgrades without raising anyone's electric rates.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations. Stop making efficient customers subsidize inefficient ones.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

AES's rate hike will increase my monthly cost in retirement more so than others as my home is ALL electric. So my monthly electric bill could increase as much as $90 with this rate increase. I find it absurd that AES is profiting over $200 million dollars a year and yet want another rate hike?

AES just had a rate hike this last year and I am shocked that my electric bills from Jan-March of this year was at or just over $500 for electric heating. My summer bills have all been over $240. This amount of electric bill is nearly unsustainable for those who are retired on fixed incomes.

Please stand up for Hoosier households and reject AES’s request to hike our electric bills in Cause Number 46258.

Dear Office of Utility Consumer Counselor,

As an AES Indiana customer, I know that my neighbors are already struggling with rising electric bills. The last thing we need is yet another bill increase from our electric utility. Please hear me and all the other AES Indiana customers asking you to put our needs over more profits for AES. I urge you to reject this new rate hike.

AES Indiana's request to collect an additional $192.9 million every year is unconscionable, especially after having another rate increase approved just last year. Combined with other already approved rate hikes, the total increase to customers will be $468 million by January of 2027. Indianapolis families can't foot that bill. We shouldn't be paying for AES to significantly increase their profits. We shouldn't be subsidizing large commercial and industrial customers who can afford to pay more for electricity. We shouldn't be penalized with higher rates for using less electricity.

Indiana's Five Pillars for energy policy, established by HEA 1007 from 2023, requires that Indiana electric ratemaking decisions must consider affordability. If approved, this rate hike would push the average monthly residential customers bill to nearly $180 per month by 2027. That's nearly $70 more per month than the average bill in 2020, and more than $30 more per month than today. That doesn't sound affordable—especially not when families are already making impossible choices about how to make ends meet. Electricity service is a basic need for living safely and securely. Families shouldn't have to choose between paying the electric bill and putting food on the table.

Instead of prioritizing their profits over their customers, AES should be working to meet our needs. That would mean empowering customers to control our bills and provide benefits to the local electric grid with energy efficiency, rooftop solar, or other distributed energy resources. It would mean helping customers at high risk of power outages benefit from resilient solar and storage systems that can also benefit the local grid. It would mean allowing for customers to save with community-owned community solar projects and allowing tenants in multifamily properties to benefit directly from on-site solar. And it would mean optimizing the local distribution grid to benefit from customer-sited energy resources—and fairly compensating customers for the value they add to the grid.

Please stand up for customers like me and reject the latest rate hike request from AES in Cause Number 46258.

Sincerely,
Carol Barnes

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Carolyn Lorenzoni

Dear Counselor Bill Fine,

I oppose AES's proposed rate hike. It would add about $51 to our bills by 2027, raise fixed fees, and keep a rate structure that penalizes low-use customers—often seniors, people with disabilities, and families on tight budgets.

With LIHEAP funding under threat, AES offers no new assistance for those most at risk. This hike would boost AES's profits by 60% while making it harder for Hoosiers to afford basic necessities.

Please reject this request and protect Indiana households.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpiODhmYjdmZml3YzAyMml0NWJlMWEyMjgxNDFlZjM3Mjo3OjdjOWQ6ZWUwNjI5M2E1YTJiNGUwYTM4MzIxOTE4NWMzMjQ1MWIwMjBiN2NmZTE4OGZkYWM3ZGVjNTBhYzliMmVhNzczZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Cheryl Batts

Subject: Dana Lutz - Concern Regarding Proposed AES Rate Increase
Date: Tuesday, August 26, 2025 2:19:37 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

I am writing as a concerned customer regarding AES's proposed price increase related to the new data centers being built in our area. My household already struggles with the current cost of electricity, and any additional rate hikes would create a serious financial burden to me and many other families in our community.

While I understand the need for infrastructure growth, I do not believe existing residents should bear the cost of powering large commercial facilities such as data centers -- especially when our bills are already at unsustainable levels. The responsibility for increased energy demand should fall on the companies creating it, not on the everyday customers who are simply trying to keep the lights on and their homes comfortable.

Affordable, reliable energy is a basic necessity, not a luxury. If rates continue to rise to subsidize corporate expansion, many residents like myself will face impossible choices between paying for utilities and other essential needs.

I urge AES to explore alternative solutions that place the financial responsibility on the companies driving this demand rather than on the customers who have supported AES for years. Protecting the financial well-being of your residential customers should remain a top priority.

Thank you for your time and for considering the voices of the community you serve. I hope AES will reconsider this approach and find a fairer way to manage increased demand without unfairly impacting local families.

Sincerely,

Dana Lutz

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to raise our electric bills again. If this request is approved as filed by AES, customers should expect to see a $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

Unlike most businesses, we keep a tight hold on our use of electricity in our home. We keep our home thermostat set at 84° in the summer and 62° in the winter. We have energy-saving light bulbs throughout the house. Our appliances are all Energy Star. We wait until we have full loads of wash to run the washing machine and a full dishwasher before we wash the dishes. It seems to me that the people that are using the least electricity should be billed the least per kilowatt hour, with the charge progressively going up as usage does. In their billing, AES does not appear to encourage homes and businesses to save electricity.

I am angry that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

Mrs. Diane Walton
Concerned AES customer
2129 Historic Oaks Blvd
Indianapolis,IN
August 26,2025

AES Indiana Cause Number 46258

Subject: Concerns Regarding Recent Rate Increases

To Whom It May Concern,

I am writing to express serious concern regarding the high rate increases recently placed on customers in the Indianapolis area. These increases come at a time when many households and businesses are already facing higher costs across the board.

It is understood that AES, in partnership with Lennox's Commercial Business Segment, is working to expand into the light commercial HVAC market. While business growth and investment in infrastructure can bring long-term benefits, it appears that these rate hikes are, in part, funding that expansion. In practice, this means that the people and businesses of Indianapolis are being asked to "fit the bill" for AES's market growth initiatives.

I believe that customers should not bear the financial weight of corporate expansion plans. Ratepayers deserve transparency on how these increases are being allocated and a clear explanation of how AES intends to balance its business interests with the responsibility to provide affordable, reliable service to its customers.

Therefore, I respectfully request that AES:
1. Reconsider the scope and pace of these rate increases since 2023.
2. Provide customers with detailed information about how those with inabilities to pay will be impacted and plan for assistance.
3. Outline alternative strategies for growth that do not come at the direct expense of Indianapolis residents and businesses.

The people and businesses in our community should not be burdened with subsidizing

expansion projects that serve corporate interests rather than directly improving local service. I live in an area where I have no choice of the electric company. I urge AES to put customers first and take meaningful steps to address this issue.

I am opposing AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. I can't afford this increase on my social security. Please reject AES's request to raise my bills AGAIN!!

Please stand up for Hoosiers and reject this rate hike!

Thank you,
Diane Walton

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We simply cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.
On top of all the other rate hikes from water sewer gas to gasoline tax to cigarettes and anything in between. It must stop!

Please stand up for Hoosiers and reject this rate hike request!
Sincerely,
A proud Hoosier neighbor

Thank you,
Donald Norris

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3NTIzOThkYzBhODFhYTM3MWNhMzJhOTlmZGRiZmViNzo3Ojc1ZmI6MWJlMzdiNmExOWFmNGM5ZWMyNTc3NWMwMTBkZjUwNzZkNmQ3NzEwODJjNzE1YjY3NjRmMmZiY2UyNTZkYWE2Njp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

AES just received a rate hike last year. Please reject their request and suggest they sell the Indiana portion of their business. AES is a monopoly who should be told to sell as they have asked for another base rate increase.

Please reject every base rate increase as this discourages customers from reducing their energy usage.

Indiana residents do not have another electric provider to pick from. Please completely reject the requested rate increase.
Thank you.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Elizabeth Evans

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Indiana may be a state that businesses want to move into, but it is increasingly becoming a state that is foreign to its residents. Subsidizing these large companies while citizens struggle to afford basic necessities will ultimately lead to the state's decline and a collapse in its ability to keep people living here. Give it another decade and we'll be a wasteland of empty factories and broken promises.

There is no logical reason for this rate hike. AES has proven time and time again that they are failures at maintaining their own infrastructure. Despite rate hike after rate hike, their infrastructure can still not stand up to minor thunderstorms. With this level of service, they have no reason to squeeze more money out of those that can't turn anywhere else. Please show this monopoly that they need to put their money back into infrastructure rather than share holders pockets before asking for more.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Hunter West

Dear Counselor Bill Fine,

I'm asking you to reject AES's latest request to raise our electric bills by another $192.9 million every year. They just had a rate increase approved barely a year ago, and now they want more. If this request goes through, the total increase on our bills will reach $468 million by January 2027. That's staggering.

AES isn't struggling. It's a subsidiary of AES Corporation, a global energy giant that operates on four continents. Meanwhile, more than a third of Central Indiana households are living in or near poverty, according to United Way. It feels like AES is treating Indiana families as a steady source of cash when so many of us are already stretched thin.

What makes this harder to accept is that AES is asking for a 60% increase in profits. They already have the highest profit margin of any investor-owned utility in the state. If their request for a 10.7% return on equity is approved, profits would jump from $260 million in 2024 to $417 million in 2026. That's not about keeping the lights on—that's about padding shareholder returns while people here are choosing between food, medicine, and paying their power bill.

And to make matters worse, AES wants residential customers to take on a bigger share of this increase than large industrial customers, like data centers. Families can't afford these hikes the way corporations can. We shouldn't be subsidizing the bills of big companies while our neighbors go without basic needs.

I hope you'll stand with Hoosier households and reject AES's request in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community and myself will not be able to afford another rate hike from AES. Everything is already too expensive and the people with the least amount of money are continually being forced to empty our pockets for people who have plenty, if not too much. Regardless of what people have, no one deserves these constant and increasing price hikes.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty. This is only going to get worse. Here and many places people are DYING because they can't afford to keep their air on among other things being too expensive included food and rent and transportation.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Jastyne Jackson-Burnett

Dear Counselor Bill Fine,

It's especially frustrating that AES wants to increase the fixed monthly charge and keep using declining block rates. These pricing strategies don't help regular people — they mainly protect AES's profits. In fact, they punish those who try to save energy, and hit hardest for people who already struggle: seniors, people with disabilities, families living paycheck to paycheck, and households with kids.

At the same time, AES isn't offering any new help for those who need it most — even as federal LIHEAP funding is on shaky ground. Without LIHEAP, thousands of Hoosiers could be forced to choose between keeping the lights on and paying for food, medicine, or rent. That shouldn't be happening in our state.

And let's be honest: this rate hike is largely about boosting AES's profits by 60%. That's wrong, especially now, when so many people are already stretching every dollar just to get by.

I'm asking you to stand up for everyday Hoosiers. Please reject AES's request to raise our electric bills.

Thank you,
Joseph Hinds

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years. We already have to deal with tariffs and increased prices on basically everything else, this is the absolute last thing Hoosiers need. If you pass this, we will certainly be heading for a recession and possibly depression with the current state of the economy.

One more thing I would like to leave with you, as a certified medical provider, if you start cutting off power because people cannot pay the bill increased, you will be putting people's health at risk that relies on energy and electricity. 2 examples. The first is say you cut off power to a house where a person uses a CPAP machine for their sleep apnea to help them sleep. It's entirely possible that without that machine, they could die in their sleep from not getting enough oxygen that the machine would provide. The last example is say its December and a family is struggling to make ends meet with the holidays. And instead of trying to make the best of it, the family with 1 young boy and 1 little girl have to sleep together under multiple blankets because their heat got turned off because they could not afford it.

Do the right thing. Don't think with your wallets and bank accounts. Think about the ordinary people who are already struggling to make ends meet. Think about the everyday people trying to live their life to the fullest. I will leave this letter with one last statement that I have found to be true, "Good karma comes back to people who do good deeds. Bad karma comes back to people who take advantage of others for their own personal gain."

The service we pay for is spotty at best. I have co-workers and friends that live in different areas of the city and to hear how AES doesn't take care of them is disgusting. In fact, not too long ago, I had a power outage that happened on a perfectly beautiful day and it lasted for about 5 hours.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. The increase in rate already makes it hard to pay our electric bill in full every month. Taking this flat fee to $50 is a slap in the face to everyone just trying to survive these days.

It's time corporations looked to the top of their organizations when the budget needs adjusted rather than at their labor costs and pricing to customers.

If this fee was to support them working to create a renewable energy network in Indianapolis my thoughts might be different. But no, it's to protect their highest earners and investors from potentially stagnating profits like the rest of ours have for the past 30 years. Trim the fat.

Thank you,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I urge you to reject AES's shameless request to squeeze another $192.9 million a year from Hoosier families, barely a year after their last rate hike. If approved, customers will be forced to pay an outrageous $468 million more by January 2027.

AES Indiana isn't struggling. As part of a multinational energy giant, they're thriving, while treating Indiana households like cash cows. Meanwhile, over one-third of Central Indiana families live in or near poverty (United Way: https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1MTM1NzA3Y2VmNTBkY2IwZTc4OWY0NGRhOTc1N2E5OTo3OmRhOWM6ODdmYzc0Y2MxYzdiYTdkMGE1MTZmYmViZjY1NDg3NGFjMjAzMGYwZmFjMDYxOTU4MzMyNTY4ZmNlZWQ2MTYyNTp0OlQ6Tg).

This scheme is nothing more than a blatant money grab. AES already has the highest profit margin of any investor-owned utility in Indiana, yet they want a 60% profit increase. If granted, their annual profits will skyrocket from $260 million in 2024 to $417.2 million in 2026. This is money ripped straight from families already deciding between groceries, medicine, and electricity.

To make matters worse, AES wants everyday households to pay more than big industrial customers like data centers. Struggling families should not be forced to subsidize corporate giants.

This is corporate greed at its worst. Stand up for Hoosiers and reject AES's request in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES. I personally can't continue to find dollars that don't exist and won't be coming in the form of wage raises or bonuses. My mortgage has done up $300 in 3 years - that's a 25% since I bought my lovely but meager home on the east side in a neighborhood that remains risky at best.

Surely AES has seen more profits since the last recent price hike than I or my neighbors have. The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

Dear OUCC Consumer Services,

As a resident and AES customer, I am writing to respectfully oppose AES Indiana's proposed rate hike. While I understand the need for reliable infrastructure and long-term energy investments, it is unfair and unjust for residential customers to bear the financial burden of upgrades that are primarily driven by the energy demands of new data centers.

According to AES's filings and public statements, portions of the requested increase are tied to infrastructure expansions—such as new generators and grid upgrades—necessary to serve large, high-demand data centers. These facilities, being developed by multi-billion-dollar corporations such as Microsoft, Meta, and Google, should be directly responsible for covering the extraordinary costs of their energy consumption. It is unreasonable to require working families and small businesses to subsidize these projects while the corporations behind them reap the benefits.

Other states, including Virginia and Ohio, have begun to explore or implement separate rate classes for data centers to ensure that ordinary customers are protected from the disproportionate costs of serving these energy-intensive enterprises. Indiana should adopt a similar approach to safeguard fairness and transparency in utility billing.

Additionally, AES's plans to construct new fossil-fuel powered infrastructure in order to meet data center demand run counter to Indiana's long-term clean energy goals and could increase future costs associated with carbon emissions and compliance. Residents should not be penalized with higher bills for corporate projects that bring little to no direct benefit to our households or communities.

I urge the IURC to reject AES Indiana's proposed rate hike as currently structured and to require that corporations developing energy-intensive data centers bear the true costs of their power demands. Protecting Indiana families from unnecessary and inequitable utility increases must remain the top priority.

Thank you for your time, attention, and commitment to ensuring fair treatment of residential ratepayers.

Respectfully,

Laura Million

Indianapolis, IN 46203
June 9, 2025

To the Indiana Office of Utility Consumer Counselor:

I am writing as a concerned Indianapolis resident and paying AES customer regarding the recent proposal from AES Indiana to increase electric rates by an additional 13.5%. I strongly oppose this rate hike and urge your office to reject it or consider a significantly lower rate increase.

AES Indiana already received approval for a 6% rate increase, and this new request—more than double that amount—is excessive and unjustified. Customers should not be asked to shoulder more financial burden when the company has not demonstrated responsible or necessary fiscal management.

Notably, AES's CEO earns over $13 million annually. This level of executive compensation is difficult to reconcile with a request for higher rates from everyday customers who are facing rising costs across the board. In addition, AES spends heavily on advertising and sponsorships, even though consumers do not have an alternative power provider. These expenditures raise serious concerns about the company's spending priorities.

I urge the Indiana Utility Regulatory Commission to closely scrutinize AES's financial practices before approving any further increases. AES should focus on cutting unnecessary costs and demonstrating efficient use of its existing revenue before asking customers to pay more.

Thank you for considering my input on this issue.

Sincerely,
Margaret Betz

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpiNzUyNTY3MGE3NmM2MGRjNTI1NTQ2NjAzNWFhMmU1Yjo3OmU2NjA6OTdjZDJhNTEzMjU5YzA1ZTQ3ZjgwMDNhZDg0MTk3ZGIzMDRkN2U2YWY5NzY0YWMxZWY5NjNiYWYwMjlmYmQ5Mzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Marilyn Obannon

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Mark Chute

Subject: Megan Hise - Stop AES from Raising Our Electric Bills
Date: Tuesday, August 26, 2025 7:28:58 PM

This is the first time you received an email from this sender (megan.hise@advocatefor.me). Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to express my strong opposition to AES's request to raise our electric bills once again. If approved as filed in Cause Number 46258, customers could see an alarming $51 increase in their bills between July 2023 and January 2027. Many of us simply cannot afford this. I urge you to reject this proposed rate hike.

I am particularly concerned that AES plans to raise the fixed charge and continue using declining block rates. While these strategies may benefit AES's bottom line, they place an undue burden on customers. Higher monthly fees and paying more per kilowatt-hour for using less energy make it harder for families to control their electric bills and disproportionately harm our most vulnerable neighbors—seniors, people with disabilities, households with children, and other low- and fixed-income households.

This concern is compounded by the federal Low-Income Home Energy Assistance Program (LIHEAP), which is already under threat due to proposed funding cuts and recent eliminations of program administrators. LIHEAP is the primary support for Hoosier households struggling with energy costs. Without it, many families will face unsafe choices.
All Hoosiers deserve uninterrupted access to essential services—no one should have to choose between paying for food, housing, healthcare, or utilities.

As more members of our community struggle to afford basic necessities, I strongly urge you to reject AES's request. Hoosiers cannot bear higher bills, especially when AES stands to increase profits by 60%.

Please stand with Hoosiers and reject this proposed rate hike.

Thank you,
Megan Hise

Dear Counselor Bill Fine,

Indianapolis and Indiana households have stretched budgets. When AES pays out millions of dollars in bonus to their top executives, another increase to consumer's rates IS an austerity rate increase. On moral, ethical and just common sense ground, YOU MUST VOTE NO ON ANY ADDITIONAL AES CONSUMER RATE INCREASES.
I am very concerned that myself, my family members, and my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

AES service has gotten worse over the past few years, with more outages and longer times to have power restored. I have been trying to contact someone about adding a separate meter to my property for a business, and I can't even get a return call or email! And they want to raise rates again?!?

Consumers can't afford this unnecessary increase. EVERYTHING is increasing except the wages in the state of Indiana. Allowing this company to increase rates "because maybe" there will be a project in the future is ascenine. Maybe Gov. Braun should use that tax surplus to fund his nuclear power. Maybe data centers should not be allowed in our communities. We do not want to pay for companies to collect and use our data against us!

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2ZGNlZWUwYWMzYjQxYzM0N2NiNGEyMmRjZTE3ZjhiZTo3OmY3MjU6NGRkYTFiNDI0YTJmNTVlZjc1MjIwZTczZWRmN2NhNzU5YWI5NTUxMzJhYjkyMGZkOGIxMDZlM2E4NTlhZmZiMzp0OlQ6Tg).

Dear Counselor Bill Fine,

7/15/25 email sent to AES with no response:
—-
I received my bill today and it is triple last month's bill. This causes financial strain on our family, especially after we've had 5+ outages within a 40 day window recently. The surges from these outages have resulted in multiple home products malfunctioning and/or no longer working (air conditioner, water machine, coffee machine, microwave). With the increase price of everything, along with the lack of consistent services, this is difficult to manage as a family. I work from home, so the outages interfere with my ability to work. I'm paying even more for services that aren't even working consistently . Unfortunately, AES is the only option we have for electricity. I believe we should be credited for the time without power as it has been about weekly for the last month and a half. How can we be credited for the lack of services received?
—-
Prices are going up and services are getting worse.

I am also writing to share my firm opposition to AES's request to hike our electric bills yet again. In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Ray Cotten

Dear Counselor Bill Fine,

When are the profits enough? Streets are full of people without homes and people are fighting for their lives. Rate hike? What are we doing?

They need more money for maintenance? Sorry, but that's the cost of doing business. AES should have to absorb it instead of using Hoosiers as their penny bank.

NO RATE HIKE. NO. RATE. HIKE.

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Dear Counselor Bill Fine,

Dear Counselor,

I'm writing to oppose AES's rate increase request in Cause Number 46258. This proposal would add $51 to monthly bills by January 2027 – a burden our community can't afford.

What's particularly unfair about this request is how it penalizes customers who conserve energy. By raising fixed charges and maintaining declining block rates, AES is essentially punishing responsible customers who use less electricity by making them pay higher rates per kilowatt hour. This backwards approach makes it impossible for families to control their bills through conservation.

These rate structures hit our most vulnerable residents hardest – seniors on fixed incomes, families with disabilities, and working households already stretched thin. Meanwhile, AES is asking for a 60% increase in their profits.

At a time when families are struggling with rising costs everywhere, we need relief, not another monthly burden that rewards a utility company's bottom line over customer needs.

I urge you to reject this rate hike and stand with Hoosier families who are doing their part to conserve energy but shouldn't be penalized for it.

Thank you for your consideration.

Thank you,
Ryan Eller

Dear Counselor Bill Fine,

I do not support another rate increase - and, hope you don't either!

It is maddening to see AES ask for an even higher profit margin, especially since they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Ryan Zumbahlen

Dear Counselor Bill Fine,

This rate hike is a terrible idea and it is your duty to reject it There is no need for another data center in central Indiana, it's bound to bankrupt the state similar to the bankruptcy. Google can cover as much property as they want to buy with their own solar panels, windmills, or other power generation, they have no need to hook up to the residential grid. Or you can bring back net zero metering and allow me to sell my power at aes rates. Don't bankrupt the state like they did with the central canal, this is a bubble that will burst, don't be a part of it.this is 1837 all over again. I test this ai models constantly and it's internet garbage, you know it's true just look at comments on any social media page. It's all terrible bots. AES will want to build a new power plant for Google, let Google pay for it and sell them extra energy to AES. They are just creating pollution and Internet addiction and not real jobs for Hoosiers.

Please reject AES’s request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5Y2l0NWFhY2M3N2FkNml0YTRjYmRkNjEzZGM0OGUzNzo3OjczZjU6YWE4M2JhNDliNWRjOWRkZWVlOTQ1YTcyMjllYjRjOTRkZDBkZTg2NWJhZGMwYzVlNDg4MjA5ZDA2YTBmMzU3MDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Zach Adamson

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Adam Barrett

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpiZDk4MTEyNGRhNjEzMGU5Yjk0ODUyMmU3ZmRhYTUxZDo3OmQ4NmQ6NTQ5YWNiYmJmNTdiYTMxOWExxYjExNmIzYThjM2ZkNmY4NjEyMDViYzI1YTI3ZWZkYTkxZDQ4MzRjNTkwMzJkNjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5NDE0MzAxMzgwOGQ4NjE4ODRiN2QzMWNjZTI3YjNkZTo3OjA4NDM6MDc2ZTUxNjRmYjcxM2U2ZjYwYjhlYzkyYWU1ZTVlNGFlY2E2ZTZlZjk1ZGM2NWE4OTcyZjFhYzFkZTFhNDE3Yzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Anne Beaty

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
barbara ferrill

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Carol Pool

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Carole Johnson

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzplYWNkNzgwNmZiZDk1MWEzNTRiOTI2MTZjZjczNDQxZTo3OjRlNzk6N2I3MmI2NjBkNTQ3OWFjMGYyZjNmODViMDUwNmFiZjE3ZTIxZTRlOTFlYWMwZmE0MGVlY2U3MzNjN2I3MGU5NTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Chuck Stone

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Clara Jones

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpiMTU1OTQ1YjhhNzhkOWQzZjIyYjQ4N2YyZDYwYjExZTo3OmU2ZWM6Y2M0NmUxN2UyYTY3MDZiMTY1NjAxZjFjZTk5YzczZTcxMjYwMzNhYjA0ZWNkZmZhNzM2N2VhOTM2OTcxNDc4Mjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Diana Morrow

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

Please do everything in your power to help resolve the billing issues impacting over 60,000 AES customers. While I am happy that the Indiana Utility Regulatory Commission is holding a hearing about this issue, they really need to open a full-blown investigation to shed light on the extent of the problem and the steps AES is taking to resolve all ongoing issues.

It feels like the cost of everything is going through the roof these days. The thought of being overcharged for my AES bill - by hundreds of dollars - and then having to wait weeks to get it refunded is a nightmare. A recent IndyStar article mentioned that AES may even be trying to charge customers for getting their money refunded. That is outrageous to me. It’s not our fault AES overcharged people! Furthermore, AES is a financially healthy multi-national corporation while many of us are pinching pennies to get by.

I'm especially concerned for my neighbors with low and fixed incomes. Being overcharged by AES may force people to incur late charges for other bills or overdraft fees. Those extra fees can really add up!

We need a thorough evaluation the extent of billing issues faced by AES customers and all the steps AES is taking to bring about resolution for everyone who has been impacted. We need to be able to trust that customers are getting the refunds they deserve in a timely fashion.

Customers have been bearing the brunt of AES's billing issues for long enough. Please do everything you can to ensure customers get the solutions they deserve through an IURC investigation into this matter.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphY2FiNGUwMmM3MThjYjQzNTlmMTMyMDJjMTY1ZmIwNzo3Ojk4NTQ6OTcwYWIwZWU0YzQwN2I5ZWJlNTBhMWU4Yjk3N2YwZml1NDhiNzhkZTU2N2FlOWYyODAyYjE3MGNmNTQxNDZhNjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Doug Morris

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1ZGY0OWYzODFmZTM2YTUzMjhhZDczMDQ3ZTUwYTdhZjo3OjFjMTY6NGJmZGJlZjRkM2E2MGE5OGE5YjFkMTZhNDk2MTM4ZWJhZGE1ZDMxMTVlYml3ZDI4YThhNTNlNWQwODNiMDYxMTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
George Ridner

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
George Ridner

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
George Ridner

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
gregg ratcliff

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Howard Fulkmam

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphNWU3NzJiNTVjZGQwMDlmZDE3MTFmNjAxMWVhYzM3ZDo3OmM4ZGU6OTc5OGIyOGQ5N2FiZWFkNGQ3YjIwNDZhODQ4ODc4YTYyMDI3MmMzNjQ2YWE0YWU2ZDIwNWE4ZDdiMzU3MzE0OTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

During the last power outage an out of state truck team of repairmen found a serious issue causing repeated outages that local AES would only repair with a quick fix before wind would knock out power again. If local AES thought this shoddy work would prove need for a rate hike, they are mistaken. I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5MmQxNGFlN2YwYTc3YmRiM2FiMWViYTZiNWUxODgyZTo3OmFlMzE6OTc2NDQ5NDZmNTFiNTliNGJkMzY1MzMzMGY5OGU3MGUwNmNmYzc5MDlkNWQzMGViYmUzMzIzNzEyYWMyMzgzNzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Jeanne Lizotte

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzowMTQ3MmM1NjE5M2ZhNDg0NjA4OGEyZGY1NDg4NThlYzo3Ojg0ZDk6NjRmM2FkZTBlOGY1YjFlMWQ3ZjkyMGRmNmIzOTNkM2MwMmQ3MGUwYmI2ZDQxNGI5NzQzZjl0ZDYwNTRhMWRlYTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Kara McKibben

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Karen Lair

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

We have filed a work order in 2023 for a repair on a pole as it is leaning severally and it has still to this day not been fixed. They have been out here 3 times 1ce in 2023 and 2ce in 2024 and now a 4th time last week. How can they request more money when they can't fix what needs to be fixed??

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Karen Twitchell

In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Krista Horn

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Larry Odle

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5ZDM2Y2E3OWMzNGFlMWNjMjE2MWRkMzQyYzI3MzUyOTo3OjEwMmM6YzM2ZmE0YzA5YmVkZjNmOTlhZmU4NTNkZTVjZGUwYzdhODgxODU1OWRlYWYxODVmYmEwZThkNzE1MDE5OWUzZTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

I am one of the many disabled customers who is living on a monthly budget. I can't afford prices to keep going up, because I will not be able to afford it. I beg you please do not do this to your customers who are unable to work and who are living paycheck to paycheck.

Thank you,
Louis Studer

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! And what happens when residents are unable to pay their utility bills? That means no lights, no cooking, no heat, no air, no freezer or refrigerator, not washing laundry, thise on oxygen die! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Lucynda Codalata

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2MjUzNTQ5NDUzZTQ5ZjY3YjI2YmUwZjEzMzNhYTZkYzo3OmVkODI6YzFhZTJkOWQ1N2M0Y2I3NDQxNmEyMjI0NzI4NDFmZDMwZDY5YWMxMTc4Nzc4Njc3YjFmNTkyZjE1MzgwZGJiMzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpiY2U5ZGU2MTQ0MTY3ZGUxMTIxOTk5ZTAyN2I3NTA2OTo3OjM3YWE6YWY4ZmQyYmM3MDBlYTlmNDA5ZTUyZTg0ZmYwMzUzOWNhZDE5ZWQwYjFkZmRjN2RkYmRhMDg0MmFhMjUxZWI2Yjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Matthew Kedanis

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Pamela Lee

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5NTIyZjc3YjI3OWRiMWNkNmU3ODUzNzM3Zjc3MGRhMTo3OjhmOGU6Y2YwYjFmMjMxYzdkYmNmY2Q5OTUwODNhNzdiZDUzMWViYjBjNTczNzAzNTBlNThlNWY1NDE5NTZmNTk1MDU3MTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Patricia Mull

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.unwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjNGY5MjY2YjVhNGI0YjEyZGFjOWUwNjU1MzFlYWI1Mzo3OjAzOWM6OTI1NzU3OWI2ZmQ4ZWMwOGFkNDY0MGMyOTZkMDVkMDczMzYxYjJlZjYwYWE5ODI2MzY2MjcyZWUyZjVjNzIjYjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Ron Young

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjNTA0YjJmZWQwYWM5ZmJhNDg0M2Y4NTc1ODhhMTlhMDo3OjNkNTU6MWMxY2Q3NmNhMWI1MWQ2MDYxMzdhYmM1OTIyNmUwZWQyOTQ4OWFiNTA1NGQ4MTVmZjc0ZjJhN2Q1NzU4OWI0YTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Steve Rumade

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1Yjk2ODFlZDIxMzg2MjNjMGUzZmQ4MzIzNWEwZTNhMjo3OjA3NjE6MDM4OTVmODc2ZDNiMGU4NWI3N2Y3ZWJhZmE5ZDNhNjQ0ZGRhZDE2MWQ4ZGVmYTFmZWU0ODFlZmZmZmQ1MzA2MTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2NGQ2OWMzOGJmNDM3ZDI3OTM4OTEyNWMxMzQ3MGM4Mjo3OjFiNTQ6Mzk1NDk1ZGU1YjVkMzJiNzgxZGJmNDgwZWZlYjQ5YjBkYzNjNTA0MTYwZTMyOTg2YjNlNDRhZTYxZDg4OTdmYzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Angela Lockwood

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxNTI0NjhjZjc4NDYzNTU3ZGFkNDBkOThiMWJjNTQ4Zjo3OmRkNjU6ODNiOWFlN2YwOGFkY2YwMjA2ZGYyYmI0OWNhYzA0NmJlODZhYTQ5N2l0YmE1YmI4NDBkNjQxNjBmZDc2OWQ3YTp0OlQ6Tg).

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Banks Kelly

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Brenda Owens

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Brian Moore

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5N2FhODg3YmQ5MTM5OWE5NzYyMGUwMjcwMmQzZDIxYTo3OjliM2E6MDBhZjNjYTYyMmU2ZmU2OGI1NzVmY2FkOTI0NDk2ODQwZjk4NTMyZjNmMDMyYjU4MDhjYzI0MWIzNjgwMTAyZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Courtney Purnell

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Craig Lazzell

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmYmJhOWYwODk1ZDlmZDM3M2QwZmYwYTFmZDljZGZiYzo3OmIwZDk6MDE5ZmI3ZjdiYzhlNjMwNWIyZmIwYjI3YThjZTI1MDQ0ZjI0MTAwN2EyNTYzNzFjMjE5YTJiMjJkMTBhMTVkYTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozNDg4ODAxOTBlYzBiOGQ1MzAyZGVjZjk0ZDMwNzUzNTo3OjEzYmY6MjY2NWJkZDIzMGE3MThmOWE4MmRiNmJiOTZiNWUzMzRlMTIwYmQ3MDRhMWQ3NmNlMDU0MDU4OGYxZTczYWY5Njp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Donna Calderon

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Donna Whitesell

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2OTRlODNlNjBlOGZlYmJiMjFkMTg5OGQzMjZiZDZhNzo3OmYzYmM6ZjctZjdiYmM4ODI1YTc1NjM0NGM2OGI3NGMwZjg3MzBlYjliODEzMWRmYzNiNTk5MWU4ZmFjZGRjNmNkZGNkMTp0OlQ6Tg).

Hello,

I am writing to oppose the proposed utility rate increase for Indianapolis residents. At a time when the cost of living is rising across all essentials, this increase would place an undue burden on households who are already struggling to make ends meet.

Utility service is a basic necessity, and affordability must remain a priority. I urge you to reject or substantially reduce this increase and seek alternative solutions that do not disproportionately impact ratepayers.

Thank you for your consideration.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Erin Schoch

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozMWZkMzg1NGQzNGQ4ZDZiZjJmNTgyZjhhNzZhZDgzYjo3OmRkOGY6MDdiZDc1OTgwMTk5OGM0MzRhNTQyOTM3NWI3NjlmN2I1NjhjNjJiMmYxYTI4ZGQ0NDdkYWRhZWYwMTNjMzViYTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Frederica Henderson

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
James Liddle

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3OWIzZmQ0ODA1OTA5NDA3YTQ3ZTRkOTBiZTBkZDk1NTo3OjA1YzQ6NzE0ZjdkZjkzZGYyNGYzMDQ3OTNmMjAwNTRiMmJjZjU0YWM2YTJiMmM5NWUyNWE2NmJmMmE4YzFiNGQ5MTExMDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Jamie Butler

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Janet Landrey

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2N2RkNmYyMzRmMDU0NzNhZjlkY2RkMDI1NTcxNjE3Njo3OjBkYTg6MjUzMmM2NjAyZGZmYjViNTE1MWMwYmY5MWFlZjZhNjlhMWY5ZDYxNzFlN2ZiYzQ1NDQxYWUwMDA5ZDJlODIhjNzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Justin Lindsay

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Kalob Balentine

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Karen I

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years. Tell their CEO and board if they want to make millions of dollars and get giant bonuses to go work in the luxury industry. Have them get a job at a company that makes yachts, expensive jewelry and high-end cars. It is a sin and extreme greed to try to make that much money off of a human need. Also, tell them to quit taking our money and then acting like they are some kind of wonderful philanthropist sponsoring the Indianapolis 500 parade. If they don't have enough money to open their data centers and continue our electricity company without raising rates
AGAIN, TELL THEM TO FIND A NEW PLACE TO WORK!
If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2ZjY0ZjgzYWQ0YmJiYWZlYjM3MmQ3MGEwMDY5ZDljNjo3OmZhYjY6Yzg1NDhlM2NmZGQ0OTBlYTM0Y2RjZDFmNmQ0ZGVkOGE0NTI1MWFmODRhYjQ1N2RhNjM3ZTZiN2l5ZDE1OTgzYzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.
My bill for a very small home is over $500 a month! I am nearing retirement. I'm supposed to be saving for my non-working years. I cannot do that because I can't even make it paycheck to paycheck without these greedy bastards taking my money. The same goes for the Beech Grove sewer department. People need to tighten their belt and make their budgets work within the amount of money that they have.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Kimberly Williams

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmNTBkMjE1NGMyZjdjZWFiMzM4ZDJjOWE5M2U5ZGVmYTo3OjkyNDU6YmU4MjIxNDM4ZTY1ZjZiNzE5MDkzNGM0Nzc5ZGQ0YWQzZjkyNTBkYWZiYmM2NThmODIwMTI5YjFiNml0N2QyNDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo4MjFhNzMxM2ZiYTJjNzRlOTk3ODhmMWVkZjM1OTA1Yjo3OmQ3MDk6NDA4ZTY3ZTRiMWM0ODMzYTQ2MWYxMjYwMDg5MjRlZDkwYjQ5ZDlmMjM1YTdlNThmNTMyNWVjYjI5ZjIyMGE5ODp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Lynne Olvey

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Michael Hankins

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Michael Nichols

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo0NTUxZDczNjQ5YTQxYzM4NmJkYzJkNDk0MTZhODc5MTo3OmFmNDI6ZTA5ZWNlYWJmMjc4MDc1YzNlOTg2YThjNTQ5ZWQ3MTk5Y2RhZDhmZDgxNThmNjZjZjFhODBhMjRhZjhjOGEyNjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Nita Zachery

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo4NmYwNTU2NzhkOGIzOTI1ZGQzYjZhOWMzODM4Nzc2MDo3Ojc4YmU6NGNiYmU1MjliMTFiMTM5YWQ4ZjlmNjg4NDJhMWRkMjcwODllYzFiMTRiMjJiZjJkMWJlMWMzNWQyY2JiYWU1Nzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Date: Wednesday, August 27, 2025 9:44:56 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Denise Steele

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2YWYyNDY5MGMxNjJiNWMyMjg1NmJkNjc2MjY3OGViMTo3OjJlYWI6OGJlN2Q3N2M5MDY2YmUzMjMxNDQzZjA1MWM4NmNlMjg2NzE2MzdkN2MzOTM3ZWQzMjZhOWRkNmFmZDRiNGJkNjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Ramona Boltinghouse

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Randall Zorman

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Robert Wampler

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Robert Wampler

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Roxanne Thames

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkZWY0NjMzMjZkODk3ZjY4ZTA4ZDM3ZTNlMTE5MWVlNDo3OmIwOWE6YmViMDU4NzcyODhjNGM3ZWNmZTk5ZmVjZjc2Yzc0OWYzOWFkNzg0MDA0ZmJkMzE2M2Y2NjBjY2Y3OTQwZGI1Yzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Steven Melton

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Susan Williams

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzplZTNhOTY2MWQ4NjkxZWY5MWY5YjgzYzFmMDc4NjJhOTo3OmNlMDQ6ZmYwZDgyNTE0MDU5MGExNzFmMzFlMDIxODk4MWEzNzEyODQ1ZDRlOGFiM2M0OGMzMmZlYjRkN2UyZTYyYmZmMDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
todd moore

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Tonda Carter

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxMWRjOTBiMmVhMmVlZDg3MGU1M2M1NTk5NDM2ODExMzo3OjczMDg6OTE0OWRkYjFhYmM1NTM5MTFlYzIyODMyMDQyMDA1NjllMDc3MjczMTczMjIxMzg3YmRlNzY3Yjg3MGIzYTA4NDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Amber Meal

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Ana Browning

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2ZDMyMGY0ZDVmOTc4YmZlZTIzZTk4YTQ1MDY0ZjdmYTo3OjcxNWQ6NjQyNzUxZTYwMTUzODgxNmZlNDIzMjcwNDQyNjAwODY5YjAxYjA4OGZiMjNkNTVkOWI5ZmY4MjBkYWNmMWRiMDp0OlQ6Tg).

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Audie Harless

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2ZDVlMTM1YzEwZTBmNTEwNWJiMWIyZGVjMmRhNmYxZTo3OjczNzM6NTM2NTdlYWU4NGNlNDhiZGRjNjBkOTg5ZGZlZjRmODM3ZDUwODFhMjUzZWQ1M2QyOWRmNzdhMjk3MjIwMTQ5Njp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

My Community consists of many elder like myself; middle class families who are dealing with increased costs in health care coverage, child care costs and inflationary food prices. We are strained in our necessary needs budgets already.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES’s request for higher ROE and please reduce their profit dramatically! Much of their finds increase may be going to increased wages, bonuses, and higher stock dividends for wealthy international andcdomestic stock holders.
Pleaserequirevthembto also attempting livevwithin their budgets, we do why not them also.

In addition, it’s disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES’s request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another

$30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Barb George

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Cecilia Sims

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Consumer Services Staff

Regarding AES Proposed Additional Rate Hikes

Good Afternoon,

The first hike rate from AES that was approved sent many consumers monthly bills soaring this summer, even customers who participated in the budget billing program received bills just $5 less than mine. This has placed a large financial burden on many consumers. We provided AES with a property easement with the promise of less power outages. When we questioned the engineer why ours and my Mother's was not looped the same as our neighbors, we were assured it would be fine. Six power outages later (this year alone) and request for an engineer to return has not been addressed (still requesting). It is extremely frustrating to look out our window at neighbors who were loped correctly and have power and be without power six or more hours, sometimes days.

With so many struggling financially, the majority of customers are unable to support additional requests from AES. The first hike should never been approved. Additional information should have been obtained, timelines for improvements with details, and a review of customer billing over the last three years, number of outages with resolution times. AES presents itself as minimal impact to your bill but that is not true no more than the situation my family is trying to have addressed. Wish-tv already addressed the CEO greed providing his 2024 $13.4 million, the burden of infrastructure improvements should fall on the back of the utility companies profit margin and their obligation to consumers.

Thank You.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3YmIwYzdlYzc3Zjc1YjEzOGNjNDhjMjFjOGY1YTg1OTo3OjdlNjU6OWNmYWY3MDZhODBkOWNkMDljNjkwZmQyMGQzNzQ4MzNjYTY2MWNiZTJmODBiZjljODU1NmQyZTAyOWJmY2EwYTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxMjUyMzI1MjMwMGJiMjhjNTVjNDliYjc3YzI1MDQyYzo3OjkzODU6YjQzODEwYjQxOTE4OWVhY2VkMWI3N2M5MjFiOTdjM2RmNDcyYjQwNDg2OTUwNTkyM2Q2MDE2NTlhMThlNDQ1ZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Debora Reed

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Deborah Curnutte

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Debra Washmuth

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Elizabeth Fischer

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo4M2VlMzkxOTYxMzg0OTc1Mjc1YWZlZmIzOTQ5OWY4MTo3OjU1OWM6Y2U3MzNkMGQ0MmFkMmNiZWZiZmQ5YWFkMDUwZGYxNTM5NjQxMjk3YTE5OWFhOGE4NWMxNDA0MWJmNDEyNWJmMzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Erika Long

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
George Ridner

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
George Ridner

Dear Counselor Bill Fine,

Too many people (low income, retired, etc) cannot afford these way above cost of living price increases. You offer essentially no financial help or reduced rates to such people; make the data centers driving so much of the infrastructure costs pay for these upgrades - not the ordinary citizens who are struggling with bills.

AES basically has a monopoly - so they need to structure prices to make this essential commodity affordable for people on the lower end of the economic scale. And a CEO who makes $13.5 million dollars, along with other high paid executives - certainly does not say good things public relations wise about this company. The consumer of this absolutely basic commodity needs to come first.

People in the lower half of the economic scale are tired of getting hammered time and again. Whose salary goes up at this same rate of increase? Certainly not those of most ordinary citizens!

Let the industrial consumers with the big profits carry more of the overall costs- not the consumers who are really struggling here! Some type of adjusted rates schedule needs to be implemented.

Thank you,

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmMWFkMjhkNTgwMmQ4MTIxZjA3MDUzMDViZTFjOTQwZTo3OmE4Y2I6OWI4MTUzYTIxZThjMWYyYzNhNTFlMDA1ZDdlM2I0MjE2NzZjOTBlNWM3NzRiMTIzZGExYTExZDgxMjc2ZGJmNTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
James Hooks

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Janet Collins

Subject: Jay Wignall - AES customers need and deserve affordable bills
Date: Monday, August 25, 2025 10:18:26 AM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjNjY4NGRhNTRkZjFhYmZiYzQ2NmQwODI3MGIyNGFiMzo3OmI1ZmY6NjhiNGEzYTZlNWIzMmEwYjYyZGFjZGIyMWRlMzZjZGMzY2RiNDFhYzI4YjM3NzBmYTFiMTgyN2YyODkzMTA4Zjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5ZmVmMDYxOWFkYjIwOGQ5YmQ1NTJjNzA1OGE5YzYyZjo3OmE4MzE6ZWVjNzNiNzlmODgzM2RjZTA5YTUwYWVkMDkyMmIxZjY3MjMwNWM3MjY4YjFlZTM5ZWVmYmY4N2MwNTUyMTM3Zjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. Dear Counselor Bill Fine,

Dear Indiana Regulators,

You exist to allow or disallow reasonable rate hikes by the companies regulating Indiana's utilities.

In that respect, the time has come for you to deny the current AES request to raise its residential rates by $30 per month regardless how much each electricity each residence used that month. Please do not allow such a heinous rate hike, especially one that has nothing to do with consumption.

I do not know that this is true but I heard that the CEO of AES has an annual salary of $13,000,000. If that is true it is further evidence that AES should not be allowed to be a provider of a public utility in the state of Indiana.

We AES customers have no choice to use a different provider of this public utility. You are there to protect the utility customers of Indiana. Please protect us from this uncalled for price hike.

Thank you,
Julie Berry

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Karen Floyd

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We already have higher utility costs for my household, for what? More coal burning and turning away from green energy? We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Lauren Neely

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2NDA0NjM3MzkwNzIwNmU3MDljNDM2YTY1NDQ3YTFiYzo3OjNlMDA6YWMxNjIxMTdiNGM1MzJmNzVhMTJlNTk5YzA4ZjM1ZmFjNTA5NmU1NjYxOGQxZmU4MDZmNjM5NjY2YTM0YTU4Mjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Linda Henderson

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Lisa Griffin

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozMjI5YTUxZWYzOWIyMjhjZTg2OTcwYzM2MDk1OTQ4NTo3OjVhM2I6MTIxNWRkMmU2OTlmM2Y0NzRlOTAzNTM3MzY0MDI5MWE4Y2IzNWM5ODliNTBlYThmNTIwNjQ1NjUwNzAyNGZhZjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Mary Patton

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Matt Spitznagle

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Michael Bennett

In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Myra HIBBS

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Indiana Utility Regulatory Commission
c/o AES Indiana / Office of Utility Consumer Counselor

Dear Commissioners and Utility Leadership:

I am writing as a concerned AES Indiana customer to respectfully urge you to reject the proposed rate increase, which seeks to raise residential electricity bills by up to $21 per month (≈13.5%) for a typical household using 1,000 kWh, phased from mid-2026 through early 2027 .

---

1. AES's strong financial performance suggests a rate hike may be unwarranted

Net income surged in 2024, reaching approximately $1.68 billion, up from $249 million in 2023 .

The company's annual revenue for 2024 stood around $12.28 billion .

Adjusted EBITDA for AES was also robust, totaling about $2.14 billion .

These figures indicate that AES is currently generating strong profitability—raising legitimate concerns about the necessity of passing additional costs onto already struggling ratepayers.

---

2. Customers are facing real hardships and service concerns

Nearly half of AES customers in Indianapolis have already received disconnection notices in the first half of 2025, underscoring widespread financial strain .

The proposed increase comes as service reliability remains a concern, with many customers worried about being charged more for an inadequate level of service .

Indiana has seen a steep 11.5% jump in residential electricity prices between May 2024 and May 2025—second-highest in the Midwest and among the largest increases nationwide . For many, this is piling onto already tight household budgets.

---

3. Alternative options should be prioritized over further burdening customers

Rather than approve another increase, AES and regulators should explore alternatives to address rising costs:

Cost efficiencies: AES could review its own operational expenses, administrative overhead, and project budgets to find internal savings before turning to customers.

Staggered or means-tested adjustments: If cost recovery is necessary, smaller or graduated increases based on income tiers could offer relief to vulnerable households.

External funding or subsidies: AES might seek grants, low-interest bonds, or state-level support to offset infrastructure and reliability investments.

Customer assistance and energy efficiency: Expand programs that help customers reduce energy usage, particularly those with disconnection risks or financial hardship.

Summary Table

Concern Detail

Financial strength AES’s net income soared to ~$1.68 B in 2024 on ~$12.28 B revenue
Affordability Nearly 50% of customers faced disconnection notices; Indiana experienced an 11.5% electricity price increase (May 2024–May 2025)
Equity Rate hike would disproportionately impact those least able to pay
Alternatives Internal cost-cutting, progressive rate structures, external funding, and expanded efficiency programs

---

In light of these points, I urge you to deny or at least significantly scale back the proposed rate increase. My hope is that together, we can find a balanced path forward that secures reliable energy service without causing undue hardship to households like mine.

Thank you for your thoughtful consideration.

Sincerely,
Natalie Pretzsch

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphZjFjZGU0YmNlMWRkNmIzMzg4NWUwODcxMzk4OTdhMTo3Ojc0YTY6MDk4Y2Y1Njc5NGE4MzRhYmNlODIyMjNhYTQ4Mzk5MzViMDhhMDRiYTJjYWE3NTNmMzY3MjJjZTA4YTFmODk0ZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5YTBmNmFjZjQyNTc5NzQ3OTg2ZjEwNGZkMzk3YjU4ZDo3Ojc4Njk6ZWVkMjMyOWY1ZWVlZjllODcyM2ExNWIxYjQ4MDJmN2M5OTBiYmQ1Zjc4YjJmMWZhOTQyZDNmNThmZTNiM2Y5NDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmNTYzYzBiMGY2NWQ0OGUwZDVmYzAyODdkZGExNWQ3Yzo3OmFkZjE6YWYwZTBlODQ3YmJjZDJhNWYwMWM5MGE1MmEyNTZhMzE2NGU1OTMzODlmOWY4MWEwYWQxMjkzYmZiODk0ZDkzZTp0OlQ6Tg).

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
RUTH WOODEN

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is frustrating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system, which STILL are not 100% resolved.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Sandra Guelker

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense if you are trying to maximize AES profits, they don't make sense for us customers trying to manage our electric bills. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Stanley Rorick

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Stephen Dicarlo

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxM2QxOTUwNGU3NmE3MDIzYzBiZjdiNGIwZWFiMjFiNzo3OmJlYWI6NjFkN2UzMzZlZDQ5YTkwZWVkYjYwYjk0MjA1YTE5ZTdjM2U0ZjgyZWE3NjEzNWMyOGE3YzE3YmUwYzM5ZGE1NTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Terrance Sullivan

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Terri Peacher-Ransom

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5NzJkNTgyZDFhNjlkZTQzMWU5OGEzYmI2ZGJiM2YxNTo3OmFjODA6MDdjMzQwNjRhOGRiMTM0MzU0OGMxNWFmMDc0NDFhY2JhMjcwYzAwNzZkMWMyMjdlNDEyYmYwZmNiZTVhMzUyOTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Theresa Saunders

If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Vickie Barton

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphMWYyYWJmYzM2ZTY1MjdhMGVhMmUyMWQ3ZDM5YTRkZjo3OjY4Y2Y6MDMxNDI1YjQ5NWQwZGRjYzY2OTI0ZmI3OTg3M2QxYTdhZDA1OTdjZmYyZDlhNDM2YjlmMzc2MzAxY2RlYTkxOTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Andrei Popa

In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Angela Bruce

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozZjU2Y2FhZTQ2ZDE4YzIyMzljMzg0MWViNDVhNTc4NTo3OjM3ZDM6YjhiZmQwYzdkODdmM2QwOGYzNDAxYTE0YWNlNDlkNjNlYzgyNGYwZWU0ZWY0NTdjYTQwOWM3NTM0NGRjNjVjYzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Ashley Benson

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Carl Daniels

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1MzY3YTM4YzNkYThlOGY1MjE3YTg5OGYxYWM3ZjFiMjo3OjQ2MWM6YzQ2NjMwN2YzMDY5ZjdmNWRhODJmMzA5ZGRiZTE4NDkwYmI0YjdhNjAzZGFmNjA1ZmFkMjdhNjgxMTliZjU3NTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Deborah Rogers

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozZDc3MTUwM2U0OTY4ZDlhMWM1NzZjMTFkYjI3MTI5NTo3OjZkYWM6OGI2OTQ1NjBmZTg0NGY1MWU2MzIwNDA2YWU5NTI0NjI1N2M2ZTQ2NWIyMGNkYzhkMjQ5M2FiY2E3OTMyZjkyMDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Elizabeth sendelweck

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Erick Orr

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmOTQ2NmUyNWYzYWRjMmE5NmZjODk2YjUwMzJmZmU1YTo3OjUwY2Y6YzFhZTQ3YjY5NmY2ZjBmZDIyY2M1ODZjOWUxNDg3ODJiOGNhNmU3MWJlZWY4NmM5ODJjNzJhNWI2NWNhY2EyODp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzowNzEzM2E3MWVmZTMzYzIyMTFmNzAxNTcxYmMwZjI3ZDo3OjhhNWQ6YjgyYmJhZDlhYWQ2YjhjNGRjY2E1NmE3MjhhODVhZjJhNDlkNWUyZDk3ZWU2MzJlM2QzOTBjNzY4NGQ4MDZmNDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Jacquelyn Hawkins

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2MmUzNjJmMDhhNWY0OGM3MzM0MjlhNzQxNzFlYWVlNzo3OjI2ZmY6ZTcxODM0MzA0NzY1ODJkNzIxMTcwNmQwYjQ2YjQ2NWQ2ZTc1OGZhNzk1NDkzNmIyYmNkOTllY2l0YmVhNTcwMjp0OlQ6Tg).

Date: Thursday, August 21, 2025 9:56:56 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Janet Sweeney

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
John Brown

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkMTRlZDhlYzk3NjRlMTExMmM4YzgyZmE3NGVjZjA4NTo3OjhhZWQ6NGZmZDZhOGY3ODZiM2VjNjM1OTAyOWRjOTlhMzMwMDkxMzJkNjI5NGU1MjliMmE1NjA5MjVlYTZlN2RiY2Q3ODp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Jordan Banks

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Karen Winegardner

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Ken Marshall

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2MjAwODYyZTJiNTU2MmVlMzA3MDg0MTVhMzMyNzhkZDo3OjRlYmE6YmI5MTI3YmMzOGMwOGVhNmM1Yzc1MzYwMjFiYzBlNjAzYTZiNWU4NzJiOWI3N2M2NjBmNWQ2ZTBmYWYxNDdhYTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Kim Myers

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Larry Timme

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Leslie Kotyuk

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again.

You have to find other ways to streamline your business. The way this will affect folks in our community is so detrimental compared to how those making this decision are affected. This is such a scary and turbulent time for so many. Please don't add to it.

If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo0MmEwZDY4MDFkNGExNzQ3YmQ0Yzk0MjBkNmMxZTYwNDo3OjZlMWI6OWUwNjQ2YmQxNjliNzNjNDgwZTQxNzAyZGFhNDg1NmUyNWE3MmNkY2NjY2JhMzkxNTVhNDFjYWI0ZDBiNzJkNTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjN2VjY2VmOTkwYjdjMWY4OGQxMzk3M2NiNDQ2NTJjNjo3OmEyMjQ6M22ZiYzIxZjI3YjJlNGZjOGNmNzkzM2MxZjM3NWVkNmEwZGNkYWY5Yjc3ZmI4OThhZDdkNTM0YzE3NDY5NjY1Zjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3MWI2NzNlOGQzMmIzNmQxM2VmNGE5YzM5ZmViZGI0NTo3OjYyYTU6ODcxMzZjMThmYjgxY2RkMjgyODAwY2FmNTBmZjAzYjZmNzQyNjQ0ZTlkMWNjOGQ4NjQ1YTA0YzQ1MTZjOTg2Yjp0OlQ6Tg).

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Mattie Vest

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Michael Johnson

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Pamela Hearn

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzplNTQxZmMwNTgxN2U3OWVlN2EwNGVlMzM0OTQ4M2Y1Nzo3OmE4OTk6ODFjMWJkZjU5YTI2NzJjNTBhMDkxZTIyODM2OTM3ZGQ0YzMyY2NmZWU1ZjhjMDYwYjBiNzEwZjZiNGU0NTQ2ODp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Patricia Davis

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3YzUwNjJkNWUzMmMwOGM1MTczOGE3YjM1OTczZDdkMTo3OjY3ODU6MzlkYjk1YTAwYTZhOTFlZDZlMGFlNjE1OTdjMTMzMWIxMmUyYjVkODA4ZjcxNjI2M2E2MmNhNjdkNjA5OTFhZTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Rebecca Paulie

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Resa Mcbride

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Robert Biggs

It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzozNjQzYzVjNGRhN2EwZDJjMzQzNGVhZTZjOWZiZDI2NDo3OmJiODQ6MTNmNmVmY2Y5NDhlNWViYjM5NzI4NmZjOWY0YzQ1ZWIzZWMyMzkzZTU2YmNlYTI2ZWQwYWUxYTY5OGMzZDhiYjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Ruth Clark

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Ruth Ewigleben

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzowYzVlNGQ0NWU5ODUzZDVjNDE3ODc2MjBhNzRkNmZjNzo3OjliZjE6ZGZlZTBjZTUzMjFiNzY0ODYyYmVlZWRmNjg1YjM3ZDY1ZTNjMWI4NDgyNzk0MTMxYWViMzBlNWExNDFhZTZlNjp0OlQ6Tg).

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Stefanie Behrens

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphYjU1NTUxYTc1Yjk2OWNkMzFkNjBhZGI3ZTJhNmQ5Nzo3OjlMmY6NTU0MmE4ZWQyNjIxODcwMmI4NGU4NmNlMWRmODNmOGJiYjI1NmE3M2QzOTFhNTk3YmI4MTZhYTA0OTE2YzNiZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Tomiha White

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoyZWEyMWE3N2NiMTcwMzk2ODNmYjc5NTczYTIxMDZkMDo3OmY5NmE6ZjZhZDEzZDFkYWVjMTE3MmU1YTYzM2U5Y2ExYWNmMjc5MTYxZjJkNzJkNGJkZGI1OTc3N2QxNjk3MzQzOTdlMTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Toni Lambirth

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Tylar Dickmeyer

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoyNTM4ZjM5YmIxMTRkNmZiYml5M2UyY2U3MjZmZTM1ZTo3OjRmOTM6YzNmNjA3N2U5Yml4YTFjZDAwNzQ1ZTgxMDJhNjZjYWNkZjdmNTEzM2U0NGY1MWRlM2IwODVhZTZkZDdhMDRiMjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Alan Nino

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpmYTAxN2I3ZjE0YTg2YWM1OTFmMzYxN2YxYWRmYmIwYTo3Ojk1ZGM6ZjljNmRlZTgyMGI5MWZlZTc0YTY5ZDM4OGVhMDVmM2NiZWE3ODdmNTY2NTAyYjU3MTQyYTUyYTY2ZDhjODA4OTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Barbara Rush

While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Bernice Demedina

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzplYzFmYzE1OWNkYmMxOGU2NmViMmYxMTIzNmVkNGQ2MDo3OjIzOWM6OGUzMTg5OTk4ZjcxODgxNTI5NTI4ODk2ZjUwM2NmZjViMTgyZDBkZDRhOGYwM2Q3NmI4MjJiZjc2ZGUzMzhkMDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Beverley Jones

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Cecelia Carter

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

Dear Utility Consumer Counselors,
I am writing to inform you that I am very disappointed with AES's proposed rate increase. I understand that they must have resources to perform their job of providing electricity to everyone. However, I am on a fixed income, and I cannot afford all of these rate increases, which come one after another.
If a rate increase is in order, I hope you will substantially decrease the amount they can receive.
Thank you for allowing me to comment.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1NWJkY2QyNWUyMGZmZDJiNDk3MDBkYWJjYjExOTk4MTo3OjZhZTE6YmRjZGRkZTMwZGYzZTVkMmE1NGZlODZhZTEzYWEzNDk5ZTg5MzhkODliNzM2NWQ4MzNiODI5NGQ1NDY4ZjhmNDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5MDIyNzhmMDY3MDUzZTRkMjczOGZlMDNjYjFlNGI1ODo3OmMxMDE6NjgxMTVkOGVhNzNlOTM2NjFhYjkyNGYzYjA4YWQxODlhNzQwODBkZGMwZjY4MGM4OThhNTU4NmRmNWFhNjMzMTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
David Martin

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzplYThlNGQ0ODFiZmY0ODc5MmQyOTQ3YzQ4YzMwMThmMjo3OjdiYzQ6OGI5ZDIzMzRmZWEyOTc4NzI3YzNkZjNmZDQ1NTcxYWNlOGU2MmVlMTg4NDdmMmYxYWNiZjZhNzAyMjgzNTc3Njp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Eric lawrence

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Eric Stone

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Gaylon Jones

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Jill Swetnam

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjYjc1NmY3OGJlNzIzOGRlNDExMDZjNjJhYzBiMmIxYjo3OjE0YzQ6YjNhNDcwZTUwNGJmODAyMTdiY2E5ZTQ5MjU4MTdiNDI2NTJlNjUyMmIzMWRkY2I5Mzc1MmU1ZTk3OGQ1MmE3ZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Kathie Mullins

LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Kevin Towell

Dear Counselor Bill Fine,

Please, I'm a working mother and money has never been tighter. The cost of everything is drowning my family. I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo2M2U3ZmFiY2Q4MmU1ODgyMzBiZDRlMGJhN2NiNzU0MTo3OmIzOWE6YWFmMzM2NGFiNzQzNjlhOTBkOTU0MDQ2NmM2ZWM3ZWUzZGY5NDcyMjAyYTY3MzRhODU3YWI1YjA5ZmEyOWNlZTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Marilyn Hinrichs

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjMGI3MjUwOWE2YjU2ZTUxMDM3Nzk5YjM1YzBmZjJhZjo3OjIxYTk6ZTE0Njc5MmJjYmFlNTllOTY0MDM0OWExY2JlYjZiZGMxODk5YmYwNmEyYTIzZjVlZThmZDZkNWEyM2RlOTU2Yzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Mary Arnold

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Date: Thursday, August 21, 2025 2:45:24 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Indiana Utility Regulatory Commission,

I am writing as an Indiana resident and AES customer to express my strong concern about the proposed electricity rate increases.

Families and small businesses across Indiana are already struggling with higher costs for food, housing, and other essentials. A further increase in electricity bills would place an unnecessary burden on households at a time when affordability should be the top priority.

From what I understand, a significant portion of this increase is slated to go toward profits for large investors such as Vanguard and State Street, rather than toward improving reliability, expanding renewable energy, or directly benefiting Indiana communities. Ratepayers should not be asked to subsidize outsized returns for distant shareholders while many of us are forced to make difficult choices about meeting basic needs.

I urge the Commission to prioritize Hoosier families and hold AES accountable for ensuring that any rate adjustments are tied directly to service improvements, infrastructure reliability, and affordability—not profit margins.

Thank you for considering the voices of Indiana residents who will be directly impacted by this decision.

Sincerely,

Melissa Webb

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it event harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear

I am writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it. 1 in 3 Marion Co. residents are in or near the poverty line.

Focus should be spent on helping consumers and businesses reduce consumption, NOT on price hikes.

2024 AES net income was $698 million compared to a net loss of $182 million in 2023 AES. Adding more increase on top of one already approved is unconscionable.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I recently went on budget billing due to ridiculous and frequent price increases on one senior living in 3 rooms of her home with one light on at one time and using elect. appliances very, very infrequently.

The meteoric rate hikes are due to Trump's idiotic tariffs, Indiana's heavy dependence on Canadian energy, and failure to adequately and quickly invest in renewable energy which is the only long term solution.

Invest heavily and quickly in renewables and cut the salaries and benefits of your top corporate officers to the bone and do it now.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

William Tellman

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Patrick Bondi

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Paul Shankland

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5OWM2NjgzZDMxOGM3OGQ0OGE3MTQ5YzNkMzgxMjhlYTo3OjAyNGM6N2Y1N2FlYjQ5MmQzN2NmODc5MDhkMzc5NzFlZTg5NGZhYjg1NzE1Njl3ZDk1NTY0OWY3NDQ5OGU2ZDBkYjAxYzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo0ZWZiNzM3MmIwYjhkMWQ0YmFjZTc3ZDUxMjc4NDE4ZDo3OmE4MWY6YTY0ZmM0OTEyM2U2YTQyYzQ2YTcxOTk2MmYwZDdkN2EyZDA3ZjhhMzEzYzA1ZGVhNmFkNDZmYmQ1OGRmOGQ4ZDp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Samantha Douglas

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Terry Crowder

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo5NGQyMDI2NDA3MDdiNTRiZDU1YjQ1MThhNzg4OTNhZTo3OmJhYTk6NGExMTk2NDEwMjRhYzYxZWEzN2UzNjBlMjJjMTk5ZGE5Nji4MDM3ZDNhNDllZDQxM2UxNDIyMzQ2M2RhODE0Yzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Date: Wednesday, August 20, 2025 9:19:30 PM

EXTERNAL EMAIL: This email was sent from outside your organization. Exercise caution when clicking links, opening attachments or taking further action, before validating its authenticity.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Torrey Bievenour

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Angie Beers

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1YzIzOTk3OTcxMzE5Zjc3ZmU0YTkwM2M5ZTdjOWM0YTo3OmIwODc6ZmZmMjY2NWEwN2ExZjc2ZDhiNTU5ZDA1ODZhYTIwYTg1ODJmNTYzNWM5YTBhZjFhOWRhMzAyODY4YWQyYTRhMzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
April Epperson

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxMzEwMjkwMmNhNjZjMmQzMTg0MzQyMGIxODcwZDUyYjo3OmVkMGQ6MzAxMmIxZWRmZjI4MTI2YWJkMDUwMGU3YzYzMmNlN2FhMTQ1NThlNmY4MWQ4YmE2Yzc5MDU4MmFhYjQwZjI5NTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjZTRlZWMwMjM5MGQ4MjZhYzY0ZWJiZWVmNjI5NTgwZTo3OjI3MTc6YTE3NWQ2ZTAzNzA2Y2VmYmFmYzczNjE1NzA1YTY1OGUxNDZhMjI5ODFlYjdkNDJiZDFhZTczNGI0NzYxMThmZjp0OlQ6Tg).

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Chris DePrez

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphMzMxZGJhZTY3NzRhOTRhY2NmYmVmYzAyNWY1MWE3Mzo3OjQ0MmU6NzNjNzQzNTdlOGUxNjgwZjM2NDYwZjk2YWU0YzhiMGI5YTgzMzhlMjA0MTQwZjUzNWFkM2M3YTJiMTJiZDNlOTp0OlQ6Tg).

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Daniel Moody

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
David Ott

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Doris King

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo1ZGMzMjY1Y2M4NWIyY2QyNzNmMTQxN2ZkMjNkNzQxNDo3OjNmNTA6MzhkNjhhYzJkZTA0ZDFhMTFkY2QzNDU2ZmFjMGRkOGNiMzYzOTdkMjZjNDllYTBmNWM0N2U0OTI3NzZmYTNiMjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

A rate just happened recently; however, the service is not consistent. Weekly brown out, hours and days without service is a big problem, but the biggest is still an issue with accounting. I was due to receive a credit. I never got it. I called and called but I couldn't get a reliable response.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo3ZjRhZDYxZmNmZWFlZGY3NDJhZGM1NGFmYTRlM2YxODo3OmQ5YTA6YjFkYzg3Y2M4NjljZjgxZGY3YTViNml0MDY3NGYzZTc4ZWE1ZTdjNmU4ZTZiMzhmNThmZTllMDhkYTA0ODVlNzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Henry in

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Jacqueline Van Sickle

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzo4OGJhYWEyZjhiM2YyYzBlYzhmZjcxMjcyZTMwYTAwMTo3OmZjY2E6OGQxNjJkNzU5NWRiNDIyYjVjNWU1ZjYzNjAwMzQ0ZmMyNzQ1NzIwODM3MWZkMjFlZWM1YzY1M2Y2MTY1YmQ0Njp0OlQ6Tg).

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
JIANFENG LI

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzowNWMwMzIyOTQ5NGJjMmMzMGQ5ZDA4Mzc1ODJiZTYxMzo3OmIwNjc6MmNhZGIzZTdmMGMxYjU5MDg5NGU1NmY3OGFjYzk0MjNkZml2YTI4ZjBkNzMzNjIyMGI2NDdlZjBmZTc2NDFkNzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Julie Warren

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpjYTQzNWViZTMwYW11ZTBjZTAyMjhlMzhlNjZlOTI0ZDo3OjcxMDA6ODZjYjRjNzJhNDQ0N2ExMjEwNTg1YWFlZmFmOGY1ZDY0M2Y1YjQ0YTg4N2ZiODU4NjYxNTg4YzFmMGM0NmM3Nzp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Kimberly Reeves

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Lawrence Bolinger

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

Coal and gas provide most of Indiana's electricity right now. When the price of coal and gas goes up, Hoosiers get hit hard with high utility bills. Monopoly utilities, on the other hand, are shielded from these price spikes because of the Fuel Adjustment Clause (FAC) tracker, which lets them pass fuel costs onto consumers.

Hoosiers are also forced to foot the bill for significant costs that come along with using fossil fuels to produce electricity - from construction to operations & maintenance to cleaning up toxic coal ash. Monopoly utilities earn a rate of return on all of this.

Unlike coal and gas, renewables and energy efficiency don't require fuel to operate, so they aren't subject to fuel cost volatility. Energy efficiency and renewables paired with battery storage are also cheaper to operate and maintain than coal and gas plants, leading to additional cost savings for consumers.

Our state needs strong energy efficiency and renewable energy policies to help drive utility costs down, combat climate change, and improve water and air quality. Please do everything you can to make sure Indiana's energy policy strengthens the use of solar, wind, and energy efficiency. Our wallets and our environment depend on it!

Respectfully,
Linda Phillips

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Lindsay Gourdouze

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzphYWY4NGFlZWZlYjEyNWQxZTM4M2IxYTIyNWI0NWRlNzo3OmJjMmQ6YTc4OGFiMjljMTQ0OWEwOWM5Njc0YTI1ZjY1ZTcxNzQ1MGFjYzUxYTcxMzM5MjA5ODg5NjU0ZmFmY2ZlZTQ1MDp0OlQ6Tg).

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzowMWE5ZjU2MGNkZmViOTQ3ZWNmMDRiMDExMjQ5NGI3ODo3OjdlZTc6NzlyZTNhMGJhNzdhZmQ1NjQxOGZiM2EwZmRkOWE3NzFmNzk4MjBiNmVlNzM4MDllMjNjZTczYTFhZjg3MjVjYjp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Mat wright

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Michael Phillips

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

A stronger focus needs to be put on the business expenses that rise to make it necessary for AES to continue to raise rates. They need to sharpen their pencil and push costs down before they burden the consumer who has no choice but to use them.

Thank you.

Dear

Please vote “No” to a rate increase.
I oppose AES Indiana’s proposed rate hike. My Groceries, housing costs, transportation, and medical bills are all going up. My living expenses increased higher than my raise this year. Adding $24-30 more a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can’t afford it, myself included.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258.
Please protect residential customers from already too-high electricity rates.

Dear

I'm writing to oppose AES Indiana's proposed rate hike. While the company says it's facing rising costs, so are everyday customers. Groceries, rent, and medical bills are all going up, and adding another $30 a month to our electric bills makes it even harder to keep up. This increase hits residential customers the hardest, and many of us simply can't afford it.

I urge the IURC to look very closely at the proposal from AES Indiana in Cause No. 46258, and please protect residential customers from already too-high electricity rates.

Thank you.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Patrick Cooley

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzoxYmVhYmQzMTRkYjYyMmFkYjc4MTg0YWVlZjU5MDU3Zjo3OjcwZjQ6MTM5Mjc4NjRkMDYzNzI2ZThmZThkNmVhZmRkMzU5YzY0MzRlZDk5OGU4M2EzMmU0NDE5MmVmZTNkMjljMTM2OTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations. there are a lot of people retiring on fixed income what are they to do!!!!

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Regards,
Paul Zoderer

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Paula Reynolds

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

AES does not deserve more profit. In the two years since AES filed their last base rate case in June 2023, thousands of AES customers have endured high temperatures without electricity for multiple days, and 60,000 customers experienced serious billing problems due to disastrous rollout of their new billing system.

Please reject AES's request for higher ROE and please reduce their profit dramatically!

In addition, it's disheartening that AES wants residential customers to subsidize large corporate utility bills by paying a higher portion of the increase than commercial and industrial customers are being asked to pay - especially considering all the other rate hikes that will hit customer bills in the next few years.

If AES's request is approved as filed by AES, our monthly electric bills will increase by a shocking $30.32 by January 2027.

Folks are already stretched thin as it is. We can't afford to have our AES bills go up by another $30 a month! Please stand up for residential customers and reject AES Indiana's request to raise our electric bills in Cause Number 46258.

Respectfully,
Rose Konare

Dear Counselor Bill Fine,

I urge you to reject AES's new request to collect another $192.9 million every year. As you likely know, this new rate hike - which AES filed for barely a year after their last rate increase was approved - is not the only increase that will raise our bills in the next few years.

If this new rate hike is approved as filed by AES, the overall increase hitting customer bills is an astonishing $468 million by January 2027.

AES Indiana is doing just fine as a subsidiary of AES Corporation, a global energy company that serves customers on 4 continents. It's infuriating that AES is being allowed to use their Indiana customers as cash cows, especially as over a third of Central Indiana households are living in or near poverty, according to United Way (https://protect.checkpoint.com/v2/r01/___https://www.uwci.org/blog/updated-alice-report-2024___.YzJ1OnN0YXRlb2ZpbmRpYW5hOmM6bzpkN2VmZjM0MjM1OGI0YzdjMzA3OTBiZDQwN2Y2NWJmNjo3OmYxYzA6ODhlYzk5ZDEzNmI1YmRjMjY5MzQyMzRlY2FlMDQzY2Q3YjE5ZWQ0OWQ5YTkyM2QwNjAyODJmN2FhYjhhMmFmNTp0OlQ6Tg).

How can AES possibly justify asking us to pay for a staggering 60% increase in their profit? AES already has the highest profit margin (ROE) out of all the investor-owned electric utilities in Indiana.

If their obscene request for a 10.7% ROE is approved, AES's annual profit will increase from $260.0 million in 2024 to $417.2 million in 2026. As members of our community are forced to skip buying food and medicine to afford their AES bills, it's immoral and reckless for AES to demand such a substantial increase in their profits.

Adding insult to injury, AES also wants us residential customers to pay a higher increase than large, industrial customers, like data centers, are being asked to pay. I doubt very many industrial customers are skipping meals to afford their AES bills, and I certainly don't think we should have to subsidize the electric bills for these large corporations.

Please stand up for Hoosier households and reject AES's request to hike our electric bills in Cause Number 46258.

Dear Counselor Bill Fine,

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this. Please reject AES's request to raise our bills in Cause Number 46258.

I am disappointed that AES wants to raise our fixed charge and continue using declining block rates. While these strategies may make sense for AES's bottom line, they don't make sense for us as customers. In fact, higher monthly fees and paying a higher rate per kilowatt hour for using less energy makes it harder for us to control our electric bills and disproportionately harms our most vulnerable low- and fixed-income neighbors: seniors, people with disabilities, households with children, and other vulnerable populations.

In addition, with the federal Energy Assistance Program (LIHEAP) under threat due to proposed funding cuts and recent administrator eliminations, it's concerning that AES is not proposing any new programs to assist our most vulnerable households. LIHEAP is the primary form of meaningful electric bill assistance available to Hoosier households. Without it, many of our neighbors will be put in dangerous positions. All Hoosiers deserve uninterrupted access to essential services. No one should have to choose between paying for food, shelter, healthcare or utilities.

As more and more members of our community have a harder time affording basic necessities, I urge you to reject AES's request to hike our electric bills. We cannot afford to pay any more on our electric bills, especially for a 60% increase in AES's profits.

Please stand up for Hoosiers and reject this rate hike request!

Thank you,
Shelia Jackson

Dear Counselor Bill Fine,

I am very concerned that my community will not be able to afford another rate hike from AES. They're already approved rate hikes that are not yet even in effect. The proposed rate hikes will go on top of these and make an already stressed out population even more financially vulnerable.

AES has very poor service and no competition. Their programs to modernize their residential delivery look good on paper, but when you ask to participate in them, they tell you that there's no way that could be done at your address. These programs were offered as an olive branch during the last rate hike discussions.

In addition, AES is telling its shareholders that profits will go up. If AES is making so much money and then asking for a rate hike while simultaneously telling shareholders to expect greater returns, they don't need the right hike.

The number of households living in or near poverty in Central Indiana continues to grow, according to United Way. In Marion County alone, over 1 in 3 households live in or near poverty.

As a growing number of our neighbors struggle to make ends meet, it is aggravating to see AES ask for an even higher profit margin, especially because they already have the highest profit margin out of all large electric utilities in Indiana.

Dear Counselor Bill Fine,

I'm leaving all the form letter stuff below that was put here. I wanted to add that, as a resident of Indianapolis for the past several years, I have experienced the highest utility costs I've had since I have been an adult. I moved into Marion County about 8 years ago, from Johnson county. My utility costs instantly went up almost 3x. I'm disappointed in the 'regulation' around the utilities, the shear out of pocket costs to me are astounding! Yet another increase just to increase profits when the entire city is struggling is unacceptable.

I am writing to share my firm opposition to AES's request to hike our electric bills yet again. If this request is approved as filed by AES, customers will experience a shocking $51 bill increase between July 2023 and January 2027. We can't afford this.
